JULY 2019

Glenair®

Commander Ed White on the first American spacewalk, 1965 with Glenair-manufactured "Golden Umbilical" cable

Glenair has been providing Space-Grade Interconnect Solutions since the earliest manned space flights.

At Glenair, we understand the highly-specialized mechanical, electrical and optical performance requirements for data, video, and control communications in exoatmospheric vehicles. Space-rated interconnect systems require specialized materials processing and precise mating interfaces. Size and weight reduction are additional key requirements. All are Glenair strengths.

Space is one of the most severe environments imaginable. During launch, spacecraft and their payloads are shaken violently and battered with intense sound waves. Earth's atmosphere has an insulating property, but spacecraft operating beyond this layer of protection are subjected to shock, vibration, temperature, corrosion, and acoustic stress factors which can damage mission-critical systems.

Temperatures in space can range from extremely cold—hundreds of degrees below freezing—to many hundreds of degrees above, especially if a spacecraft ventures close to the sun. Temperature extremes can generate stress in metal, glass and polymer materials and potentially lead to cracking or other failures.

At Glenair, the overriding concern for space-grade interconnects is reliability. When millions of dollars worth of equipment is at stake—not to mention invaluable human cargo when brave and talented women and men take flight—the interconnect components we manufacture have to work with assured reliability and safety every time.

SOLID SHELL LIGHTWEIGHT ALUMINUM EMI/RFI AND STRAIN-RELIEF BACKSHELLS

500-010
Banding porch platform for shield termination with Band-Master ATS® Standard or Micro bands. Round cable entry. Top, side, 45° or dual 45° entry options.
Page 6

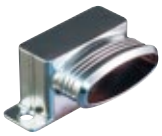
507-142
Banding porch platform for shield termination with Band-Master ATS® Standard or Micro bands. Dual round cable entry.
Page 8

500-012
Qwik-Ty arm for cable strain relief. Round cable entry. Top, Side, or 45° entry options.
Page 9

SOLID SHELL ULTRA LIGHTWEIGHT COMPOSITE EMI/RFI BACKSHELL

507-088
High-strength, ultra lightweight composite thermoplastic. Electroless Nickel plated for EMI shielding effectiveness. Banding porch platform for shield termination with Band-Master ATS® Micro bands. Round cable entry. Top, Side, or 45° entry options.
Page 10

SOLID SHELL LIGHTWEIGHT ALUMINUM EMI/RFI BACKSHELLS, ELLIPTICAL ENTRY



507-296
Banding porch platform for shield termination with Band-Master ATS® Micro bands. Elliptical cable entry. Top or Side entry options.
Page 12

507-297
Banding porch platform for shield termination with Band-Master ATS® Micro bands. Elliptical cable entry. 45° entry.
Page 14

SPLIT SHELL LIGHTWEIGHT ALUMINUM EMI/RFI BACKSHELL, ELLIPTICAL ENTRY

507-178
Split construction with screwlocks for easy assembly: connectors can be fully mated before hardware is fastened. Banding porch platform for shield termination with Band-Master ATS® bands. Elliptical cable entry.

(1) Extended jackscrew will not work with 45° cable entry or with dual 45° entry backshells.

(2) Sizes 9 thru 69 use e-rings or c-clips for connector attachment, 100 pin uses c-clip only.

Application Notes

About Micro-D Backshells

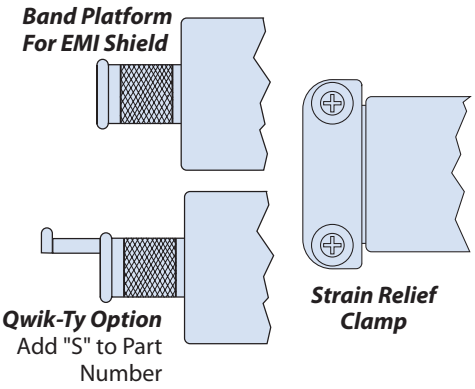
Micro-D EMI backshells are used to ground cable shields for electromagnetic compatibility, and to provide strain relief and mechanical protection of wire-to-connector terminations. These backshells are made out of aluminum alloy or composite thermoplastic. Electroless nickel is the most widely used finish. These backshells are compatible with industry-standard metal shell M83513 type connectors. The following application notes explain how to select the right type of backshell.

EMI Versus Non-EMI Backshells

Select EMI backshells if your cable has a braided shield or screen. The cable shield must be terminated to the backshell for electromagnetic compatiblity (EMC). Glenair recommends Band-Master ATS® Micro bands, supplied with the backshell or purchased separately for reliable shield termination.

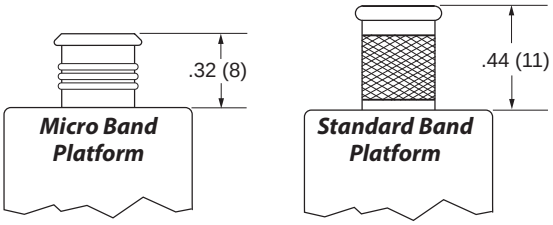
Select a strain relief backshell to prevent wire-to-connector terminations from inadvertent removal due to vibration, shock, or handling.

EMI backshells with Band-Master ATS® shield terminations do not normally require additional strain relief. Micro-D wires are typically potted in place, and the shield braid alone provides sufficient additional strain relief. Optional Qwik-Ty legs are available on a number of backshells for additional light-duty strain relief.



Standard Band Versus Micro Band

Most Micro-D EMI backshells feature low-profile band platforms designed for a narrow (.125" width) Micro Band. Some have a taller band platform which also accepts standard-width bands (.250" width).



One-Piece versus Split-Shell Backshells

Split-shell backshells allow for easy installation over already terminated wires. Some split backshells fit over the connector, eliminating the ferromagnetic clip component. Split-shell versions also can accommodate screw locks. One-piece backshells must be staged on the wire bundle prior to final wire-to-connector termination.

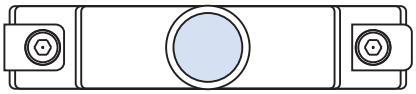
Jackscrews and Screwlocks

Jackscrews are fixed in position and are used to drive connectors together during mating. Screwlocks float and allow the connectors to be coupled manually before the screwlocks are engaged. Screwlocks allow faster mating, while jackscrews offer less risk of contact damage.

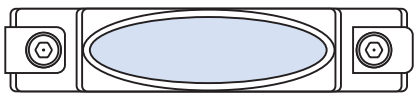
Elliptical Versus Circular Cable Entry

Choose elliptical backshells if the wire bundle diameter is too big to fit in a circular cable entry. Large Micro-D connectors (51 pins and up) usually exceed the limits of the round entries. Refer to the cable entry and wire bundle tables in this section to determine if an elliptical entry is necessary.

The actual size illustrations to the right show the difference between round and elliptical cable entries. The round entry cross-sectional area = π ($\frac{1}{2}$D)^2 = .11 In.^{2}. The formula for the area of an ellipse is π (Length)(Width) ÷ 4 = .36 In.^{2}



Round Cable Entry
100 Pin .375 Inch (9.5 mm) Diameter



Elliptical Cable Entry
100 Pin .360 by 1.29 Inch (9.1 X 32.8 mm)

*Glenair recommends elliptical style backshell

NOTES:

1. This sizing chart is for discrete wire bundles of the type and gauge indicated. When using twisted pairs, or other wire types/configurations, refer to Glenair Circular Connector Backshells & Accessories catalog, page 8, "Calculating Wire Bundle Diameter." Glenair recommends 70% area fill (wire bundle area to entry port area), not to exceed 80% area fill on Micro-D Backshells.
2. When solder-cup Micro-D connectors and low-profile backshells (short in height) are used in conjunction, the transition angle from the outer pins to the centralized entry port becomes severe and can increase the susceptibility to damage. Glenair recommends elliptical shaped entries to minimize angles of contact that can occur with round cable entries.
3. Blending and deburring/smoothing of internal geometry may not produce "perfectly" smooth, rounded features, but has a proven history of success in precluding wire abrasion damage. For additional wire protection, wrap wire bundle with DuPont™ Kapton® tape in areas that may come into contact with cable entry transitions or other interior angles.
4. Glenair recommends that harness designs avoid excessive fill percentages and severe contact angles as previously described. For applications where these conditions must exist, consult our factory for appropriate additional design / workmanship solutions

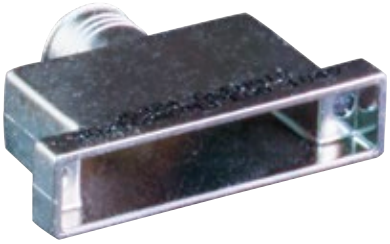
Lightweight Composite EMI/RFI Banding Backshell

Solid shell, round, top, side, and 45° cable entry · 507-088



Save Weight and Eliminate Corrosion Damage with composite Micro-D backshells. These round cable entry backshells are injection-molded with high strength Ultem 2300 fiberglass-reinforced thermoplastic.

Choose Top, Side or 45° Cable Entry.

Electroless Nickel Plated for excellent EMI shielding effectiveness.

EMI/RFI Split-Shell Elliptical Backshell

Split shell, elliptical, top cable entry · 507-178

Split Backshell With Elliptical Cable Entry provides added room for larger wire bundles. Terminate cable shields with Band-Master ATS® Micro Bands. This backshell features floating male screwlocks which allow full mating of the connector before the screws are fastened.

Rugged Aluminum housing with stainless steel hardware, available in electroless nickel or gold plating

How To Order EMI/RFI Split Shell Backshells								
Sample Part Number		**507-178**	**M**	**25**	**06**	**K**	**F**	**T**
Series	**507-178**							
Shell Finish	**M** – Electroless Nickel **Z2** – Gold							
Connector Size	**09**, **15**, **21**, **25**, **31**, **37**, **51**, **51-2**, **67**, **69**, **75**, **100**, **130** (See Table I)							
Cable Entry Code	**04**, **05**, **06**, **07**, **08**, **09**, **10**, **11**, **12**, **13**, **14**, **15**, **16** (See Table II)							
EMI Band Strap Option	**B** - Micro Band Supplied **K** - Coiled Micro Band Supplied **Omit** (Leave Blank) - Band Strap Not Supplied							
Hardware Option	**Screwlocks** **H** - (2) Hex Head Screwlock **E** - (2) Extended Screwlock (styles T and S only) **F** - (2) Jackpost, Female **FF** - Fixed Female Jackpost **FE** - Extended Female Jackpost	**Jackscrews** **J** - (2) Fillister Head Jackscrew **HJ** - Hex Socket Jackscrew **EJ** - Extended Jackscrew (styles T and S only) **Omit** for standard knurl head Screwlock						
Qwik-Ty Option	**T** = with Qwik-Ty strain relief **Omit** for none							

NOTES

Screwlocks: screws float to allow connector to engage completely before tightening.
Jackscrews: screws must be tightened simultaneous with connector engagement

MATERIALS/FINISH

Backshell: Aluminum alloy
Hardware: CRES / passivated

Application Notes

About D-Subminiature Backshells

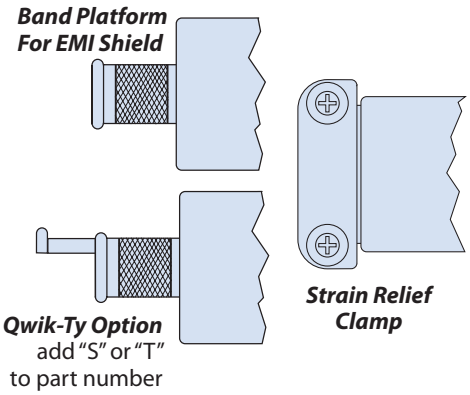
D-Sub EMI backshells are used to ground cable shields for electromagnetic compatibility, and to provide strain relief and mechanical protection of wire-to-connector terminations. These backshells are made out of aluminum alloy or composite thermoplastic. Electroless nickel is the most widely used finish. These backshells are compatible with industry-standard metal shell M24308 type connectors. The following application notes explain how to select the right type of backshell.

EMI Versus Non-EMI Backshells

Select EMI backshells if your cable has a braided shield or screen. The cable shield must be terminated to the backshell for electromagnetic compatiblity (EMC). Glenair recommends Band-Master ATS® Micro bands, supplied with the backshell or purchased separately for reliable shield termination.

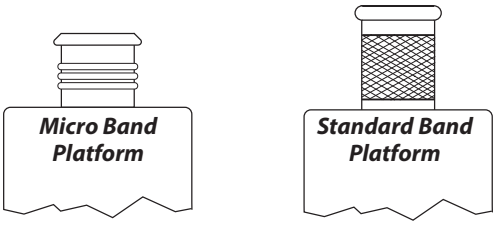
Select a strain relief backshell to prevent wire-to-connector terminations from inadvertent removal due to vibration, shock, or handling.

EMI backshells with Band-Master ATS® shield terminations do not normally require additional strain relief. For non-EMI/RFI applications, saddle bar strain relief clamps are available. Qwik-Ty legs are available for most of the EMI/RFI banding backshells for additional light-duty strain relief.



Standard Band Versus Micro Band

Most D-Sub EMI backshells feature low-profile band platforms designed for a narrow (.125" width) Micro Band. Some have a taller band platform which also accepts standard-width bands (.250" width).



One-Piece versus Split-Shell Backshells

Split-shell backshells allow for easy installation over already terminated wires. Some split backshells fit over the connector, eliminating the magnetic clip component. Split-shell versions also can accommodate screw locks. One-piece backshells must be staged on the wire bundle prior to final wire-to-connector termination.

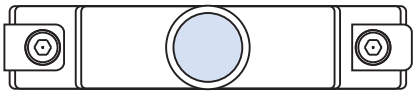
Jackscrews and Screwlocks

Jackscrews are fixed in position and are used to drive connectors together during mating. Screwlocks float and allow the connectors to be coupled manually before the screwlocks are engaged. Screwlocks allow faster mating, while jackscrews offer less risk of contact damage.

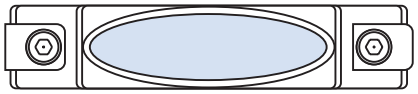
Elliptical Versus Circular Cable Entry

Choose elliptical backshells if the wire bundle diameter is too big to fit in a circular cable entry. High-density D-Sub connectors will benefit from elliptical cable entry backshells due to the larger wire count. Even standard density D-Subs with 50 wires may exceed the limits of the round entries.

The illustrations to the right show the difference between round and elliptical cable entries. The round entry cross-sectional area = $\pi(\frac{1}{2}D)^2 = .11$ In.^{2}. The formula for the area of an ellipse is π(Length)(Width) $\div$ 4 = .36 In.^{2}



Round Cable Entry
.375 Inch (9.5mm) diameter



Elliptical Cable Entry
.360 By 1.29 Inch (9.1 X 32.8 mm.)

NOTES

1. For die cast backshell, entry may be elliptical. Consult factory for dimensions.
2. Cable entry dash no. "00" indicates shorting can option, available on T (Top Entry) only. See Part No. 557T316 on page 43 for ordering information.
3. For "B" configuration: Dash no. 33, standard can height to be 1.400 when mounting hardware is required.
   Dash no. 34 and 35, standard can height to be 1.800
   For "E" configuration: Dash 34 and 36 standard can height will be 2.050 when mounting hardware is required.
   For "T" configuration: Shell Size 1 with Dash 34 entry only available without hardware. Consult factory for shorter lengths.

Split-Shell Low-Profile EMI Backshell, Elliptical Entry, Non-environmental

289T005 top entry, 289S005 side entry

289T005
289S005

FOR USE WITH GLENAIR SERIES 28 HIPER-D CONNECTORS

Lightweight, low profile space-saving two piece backshell fits securely into groove in HiPer-D® connectors. Fits standard HiPer-D® pin and socket connectors (280-018P, 280-019S) and Combo HiPer-D® connectors (280-046P and 280-047S). Terminate cable shield with optional Band-Master™ATS clamping band. Elliptical cable entry provides room for large wire bundles. Machined aluminum alloy or stainless steel backshell consists of two interlocking housings and two 300 series stainless steel screws. Overlapping seam improves EMI shielding performance. Compatible with Glenair Series 77 lipped heat-shrink boots. Non-environmental.

SCREENED

289T008
289S008

FOR USE WITH GLENAIR SERIES 28 HIPER-D CONNECTORS

289-008 backshell provides watertight EMI protection for HiPer-D® connectors. Fits standard HiPer-D® pin and socket connectors (280-018P, 280-019S) and Combo HiPer-D® connectors (280-046P and 280-047S). Available with top entry or side entry. Terminate cable shield with optional Band-Master™ATS clamping band. Elliptical cable entry provides room for large wire bundles. Backshell consists of solid one piece housing, two stainless steel hex head jackscrews, two jackscrew retainer clips and silicone rubber sealing gasket. Aluminum or stainless steel. Use with Glenair Series 77 heat-shrink boot.

Solid Shell EMI Backshell, Environmental, Panel Mount

289T007 top entry, 289B007 45º entry, 289S007 side entry

FOR USE WITH GLENAIR SERIES 28 HIPER-D CONNECTORS

289-007 backshell fits panel mount HiPer-D® connectors. Available in straight, right angle and 45° versions. Aluminum or stainless steel body, fluorosilicone rubber gasket and stainless steel screws. Design also features a boot groove for the attachment of Series 77 heatshrink boots. Terminate cable shield with optional Band-Master ATS® band. Optional slot allows easy termination of multiple individual cable shields. Attach cable ties to optional Qwik-Ty™ leg.

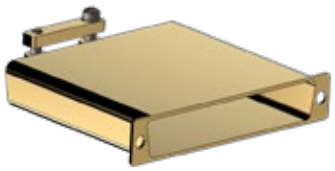
BACKSHELL, LIGHTWEIGHT DESIGN WITH SADDLE CLAMPS FOR STRAIN RELIEF IAW ESCC 3401/072, TYPE VARIANTS 05, 06, 07, 08, 09, AND 72



MATERIAL/FINISH NOTES

Backshell: Al Aluminum Alloy with 30 micro-inches Gold (min.) over electroless nickel per ESCC No. 3401/072 Para. 4.4.2

Alternate finish code A174 per ESCC3401/072 available (Glenair Electroless Nickel code ME), consult factory

Hardware: Brass with 0.7µm Gold (min.) over 1µm copper (min.)

For dimensions and weight see ESCC3401/072

How To Order Glenair 557-433 Commercial Equivalent					
Sample Part Number		**557-433**	**GME**	**-1**	**A**
ESCC Series	Lightweight strain relief clamp with saddle bars				
Finish Symbol	**GME** = Gold over Electroless Nickel per ESCC No. 3401/072 Para. 4.4.2				
Shell Size	**1**=E, **2**=A, **3**=B, **4**=C, **5**=D, **6**=F

Glenair Improved Designs for Removable-Entry and Cable Clamp Rectangular Backshells

557-652 and 557-653 (with IS-Sommer cross-reference)

IS-Sommer rectangular connector accessories utilize a two-piece design with a separable band platform and loose/removable hardware. Glenair design improvements to this standard deliver serious performance in space and other high-performance application environments. Importantly, Glenair backshells of this type feature only captive hardware. Even when the two-piece backshell is split for assembly around the wired connector, Glenair hardware remains captive to the backshell body, eliminating the risk of FOD in sensitive space applications.

The architecture of the Glenair split shell design incorporates a sliding tongue-and-groove for superior EMC performance and ease of use. Also, unlike competitor solutions, the separable cable entry piece is captive when the backshell is assembled, and stays in position with an anti-rotation feature.

Glenair split-shell cable-clamp backshells likewise feature all captive hardware and a low-profile saddle-bar cable clamp. In general, the Glenair design facilitates faster, safer, trouble-free cable assembly.

Contact Glenair for detailed drawings and dimensional details.

STANDARD BANDING TOOL

Color-coded tool handle:

= Standard; Black

The 601-100 Band-Master™ ATS Standard Tool with Counter for Standard Bands

Weighs approximately 1.30 lbs., and is designed for .240" width clamping bands in a tension range from 100 to 180 lbs. Calibrate at 150 lbs. ± 5 lbs. for most shield terminations. Tool and band should never be lubricated.

The 600-058 QPL Qualified (M81306/1A) Standard Banding Tool without Counter

Weighs 1.22 and is designed for .240" width clamping bands in a tension range from 100 to 180 lbs. Calibrate at 150 lbs. ± 5 lbs. for most shield terminations. Tool and band should never be lubricated (not shown).

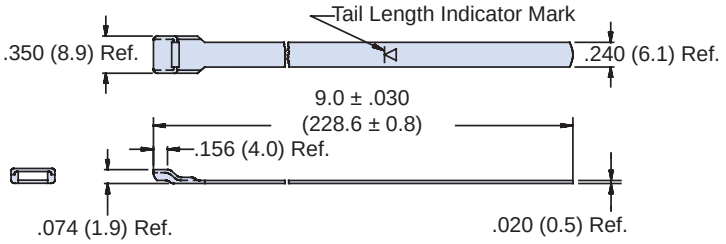
STANDARD BANDS

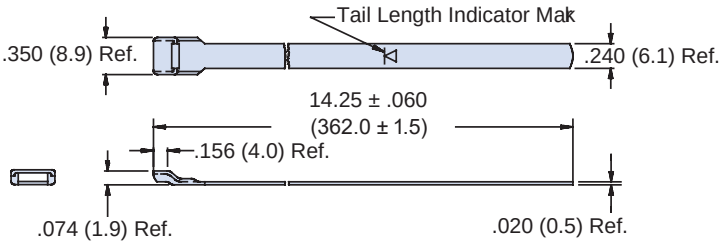
Short Flat 601-005
Short Precoiled 601-006

Standard bands are precision constructed of 300 Series SST passivate IAW AMS 2700 . Short standard bands are 9.00 inches (228.6) in length and designed for use with the Band-Master ATS® 601-100 manual banding tool or the 601-106 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 1.0 inches (25.4).



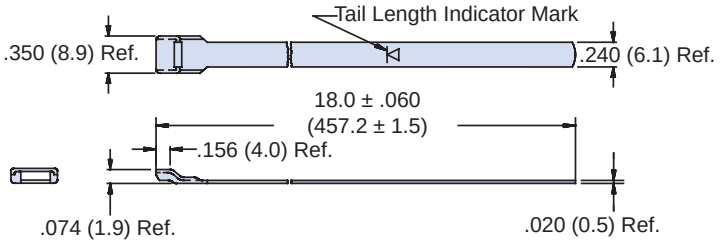
Medium Flat 601-040
Medium Precoiled 601-041

Standard bands are precision constructed of 300 Series SST passivate IAW AMS 2700. Medium standard bands are 14.25 inches (361.95) in length and designed for use with the Band-Master ATS® 601-100 manual banding tool or the 601-106 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 1.8 inches (45.7).



Long Flat 601-049
Long Precoiled 601-050

Standard bands are precision constructed of 300 Series SST passivate IAW AMS 2700. Long standard bands are 18.0 inches (457.2) in length and designed for use with the Band-Master ATS® 601-100 manual banding tool or the 601-106 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 2.5 inches (63.5).



Dimensions in Inches (millimeters) are subject to change without notice.

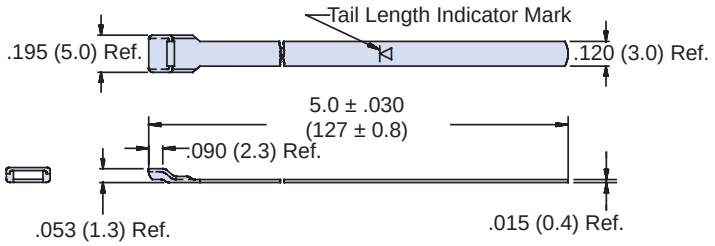
MICRO BANDS

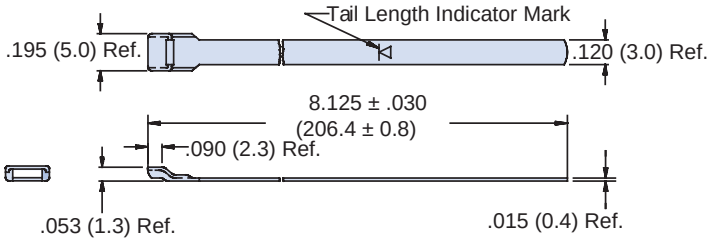
Short Flat 601-024
Short Precoiled 601-025

Micro Bands are precision constructed of 300 Series SST passivate IAW AMS 2700. Short Micro Bands are 5.00 inches (127) in length and designed for use with the Band-Master ATS® 601-101 hand banding tool or the 601-107 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately .5 inches (12.7).



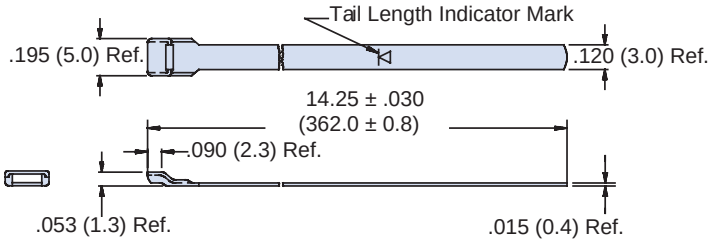
Medium Flat 601-060
Medium Precoiled 601-061

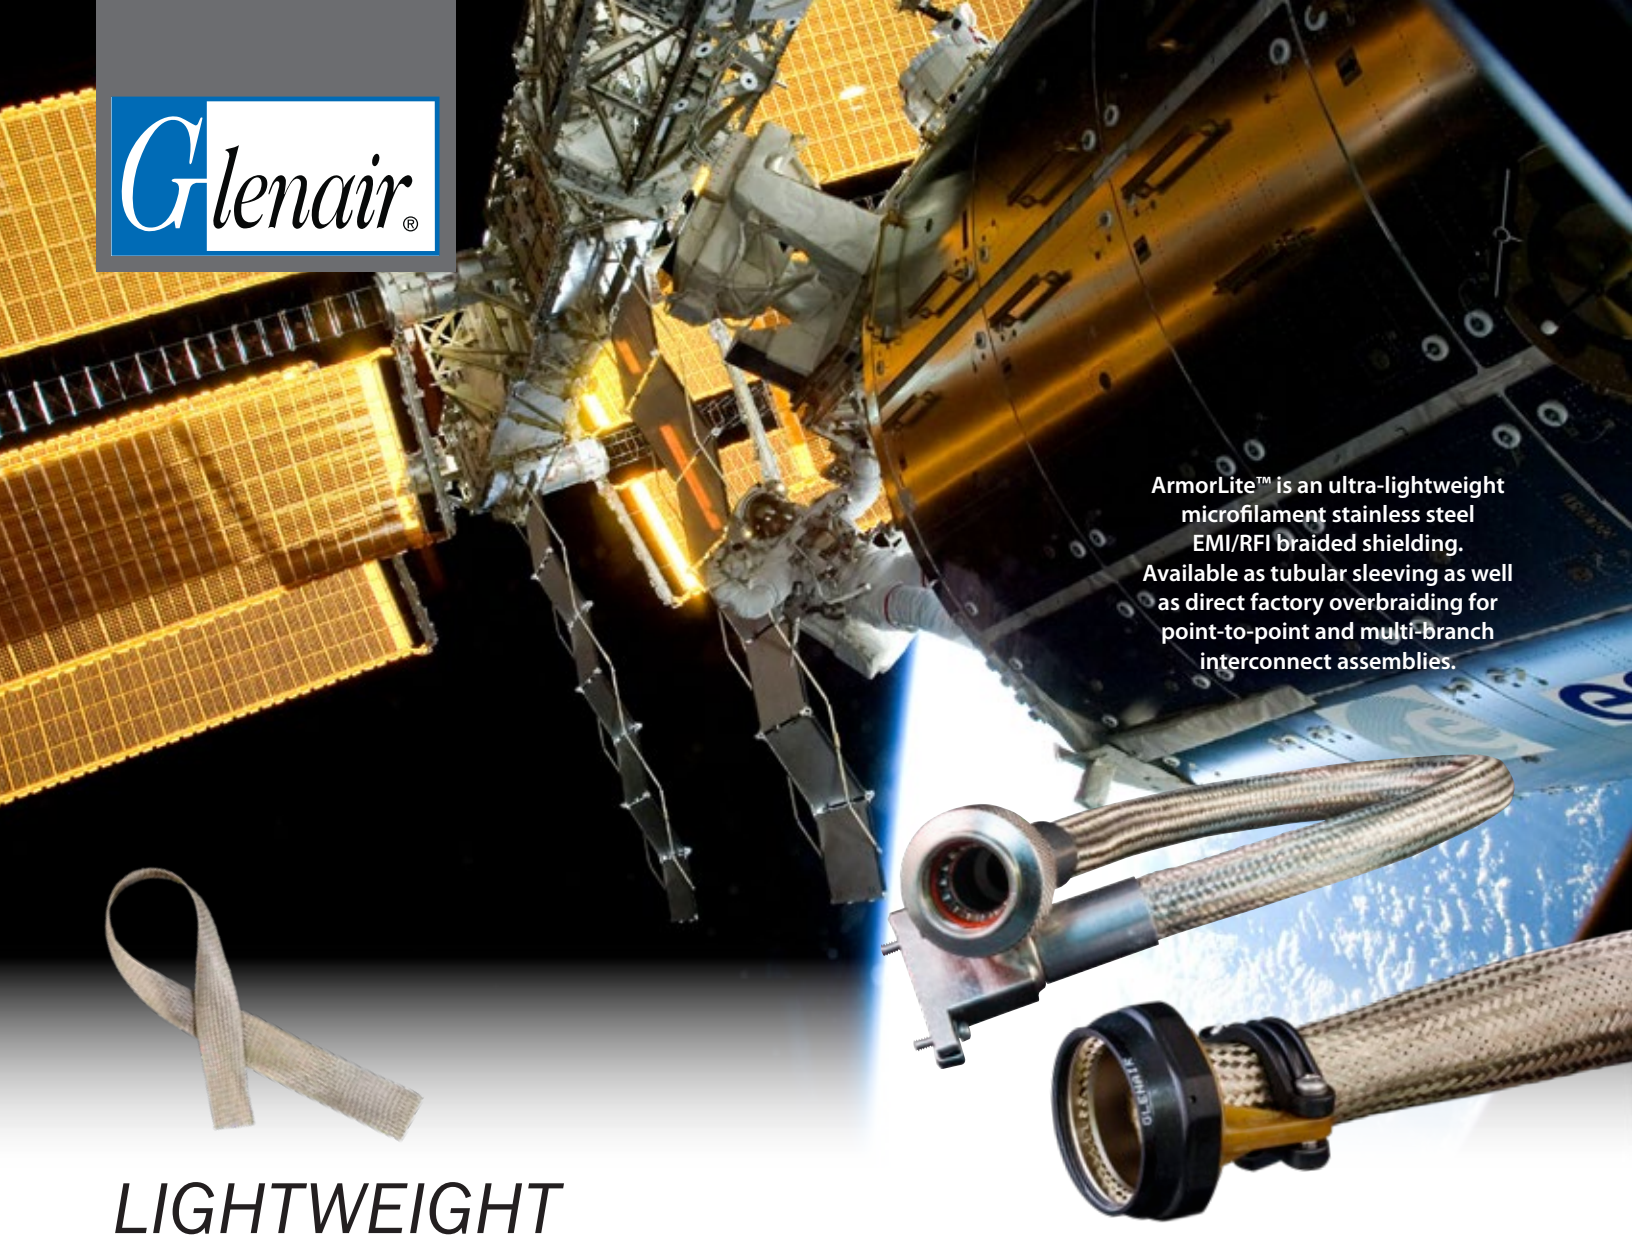
Micro Bands are precision constructed of 300 Series SST passivate IAW AMS 2700. Medium Micro Bands are 8.125 inches (206.4) in length and designed for use with the Band-Master ATS® 601-101 hand banding tool or the 601-107 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately .88 inches (22.4).



Long Flat 601-064
Long Precoiled 601-065

Micro Bands are precision constructed of 300 Series SST passivate IAW AMS 2700. Long Micro Bands are 14.25 inches (362.0) in length and designed for use with the Band-Master ATS® 601-101 hand banding tool or the 601-107 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 1.88 inches (47.8).





ArmorLite™ is an ultra-lightweight microfilament stainless steel EMI/RFI braided shielding. Available as tubular sleeving as well as direct factory overbraiding for point-to-point and multi-branch interconnect assemblies.

LIGHTWEIGHT

ARMORLITE™

Microfilament nickel-clad expandable stainless steel EMI/RFI braided shielding

Save weight and money every time you fly! All-Up-Weight (AUW) has met its match: ArmorLite™ microfilament stainless steel braid saves pounds compared to standard QQ-B-575/A-A-59569 EMI/RFI shielding. ArmorLite™ is an expandable, flexible, high-strength, conductive stainless steel microfilament braid material designed for use as EMI/RFI shielding in high-performance wire interconnect systems. The principal benefit of ArmorLite™ is its extreme light weight compared to conventional nickel/copper shielding. By way of comparison, 100 feet of 5/8 inch ArmorLite™ is more than four pounds lighter than standard 575 A-A-59569 shielding. Plus, ArmorLite™ offers superior temperature tolerance compared to other lightweight tubular braided shielding including microfilament composite technologies.

- **Ultra-lightweight EMI/RFI braided sleeving for high-temperature applications -80°C to +260°C**
- **Microfilament stainless steel: *70% lighter* than NiCu A-A-59569/QQB575**
- **Outstanding EMI/RFI shielding and conductivity**
- **Aerospace environment qualified**
- **Superior flexibility and "windowing" resistance: 90 to 95% optical coverage**
- **70,000 psi (min.) tensile strength**
- **Best performing metallic braid during lightning tests (IAW ANSI/EIA-364-75-1997 Waveform 5B)**

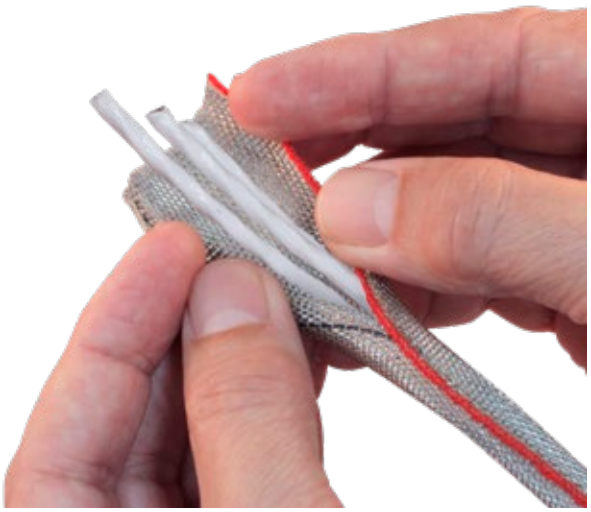
WITH ARMORLITE™ TECHNOLOGY

MasterWrap™ flexible, lightweight wraparound EMI/RFI shielding and abrasion protection

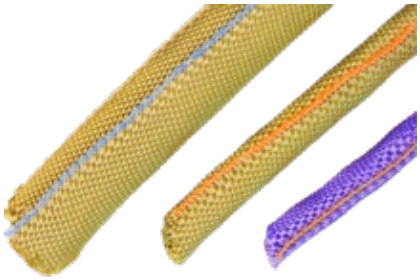
for spot EMI/RFI shielding coverage and repair of wire harnesses

MasterWrap™



- **Up to 70% weight reduction compared to standard metallic EMI shielding**
- **Replaces harder-to-install tubular EMI/RFI sleeving**
- **Fast and easy side-entry installation and removal**
- **Reduces windowing and coverage gaps**
- **Superior flexibility, durability and repairability**
- **Temperature tolerant from -65°C to 200°C**
- **High-frequency EMI shielding performance comparable to standard metallic and lightweight tubular braid**
- **Outstanding abrasion and mechanical protection**
- **Halogen-free and RoHS compliant**
- **500 hour salt spray corrosion resistance**
- **50,000 cycle 90°–120° bend flex tested**
- **Outstanding caustic chemical and corrosive fluid resistance**

Tubular braided sleeving meets the broad range of EMC shielding and mechanical protection requirements of aircraft harness assemblies. But the need to apply conductive shielding materials over installed aircraft wire and cable bundles requires new technology. Legacy self-wrapping cable braid has long been available for EMI/RFI applications and abrasion protection, albeit with poor performance due to its heavy weight, inflexibility, and "windowing," which results in poor shielding performance. MasterWrap™, a lightweight, easy-to-install, side-entry, self-wrapping shielding solution —incorporating Glenair microfilament ArmorLite™ and composite thermoplastic PEEK fibers—solves these problems and more. MasterWrap™ is ideally suited for both long-run wire harness protection as well as spot coverage and maintenance of EMC cable applications—all with outstanding weight reduction and ease-of-assembly. MasterWrap™ is qualified for use at major aircraft manufacturers for both long cable runs and spot coverage and repairs.



MATERIAL CONSTRUCTION AND HANDLING PERFORMANCE

Flexible material eliminates kinking and windowing · Spring members ensure shielding stays tight to wire bundle

Ultra-lightweight microfilament stainless steel core, plated with conductive nickel for outstanding shielding performance

Interwoven with high-temperature PEEK composite thermoplastic spring members that ensure up to 95% optical coverage

- Material design provides uniform surface with limited interference to structures and clamps
- Provides optimum surface coverage and adherence to wire bundle without buckling during both straight and angled routing
- MasterWrap delivers increased abrasion protection with additional axial edge strength members compared to standard tubular braided shielding
- Reduces kinking and windowing compared to full metal braid solutions for excellent shielding performance

WITH ARMORLITE™ TECHNOLOGY

MasterWrap™ flexible, lightweight wraparound EMI/RFI shielding and abrasion protection

for spot EMI/RFI shielding coverage and repair of wire harnesses

SPACE GRADE NASA ESA, JAXA SCREENED

HERE'S WHAT YOU NEED TO KNOW ABOUT WEIGHT

Weight of standard metallic tubular braided cable shielding		
EMI Braided Shielding Type (measured samples all 1/2" diameter)	Weight g/ft	Weight g/m
Glenair nickel-clad copper braid	21.6	70.9
Raychem RAY-103-12.5 nickel-clad copper braid	21.9	72.0

Mechanical and Environmental Performance Summary		
Vibration	No evidence of wear or visible defect	DO-160G Cat S and H
Abrasion	No evidence of wear, visible defect or electrical degradation	EN-3475-511:2002
High Temperature Exposure	168 hours at 200°C; no visual or electrical degradation	EN 6059-302 part 302
Rapid Change of Temperature	10 hour hot and cold cycling; no evidence of wear or visible defect	EN 6059-308 part 308
Vertical Flammability	Pass	14 CFR part 25.853
Fluid Immersion Testing	No visual or electrical degradation	DO-160G
Bending Properties	25000 cycles; no breakage, no plating delamination	EN 6059-402
Salt Fog 500 Hours	No evidence of base metal on braid	ASTM B117-03 Sodium Chloride 5%

MasterWrap is compatible with most aerospace industry fluids. Consult factory for specifics.

WHAT YOU NEED TO KNOW ABOUT EMI/RFI SHIELDING PERFORMANCE

	NiCu	ArmorLite™	Amberstrand®	MasterWrap™
TRANSFER IMPEDANCE (Per IEC 62153-4) (Max values for 1/2 inch diameter shields)				
FREQUENCY				
10 KHz	5 mΩ/m	50 mΩ/m	60 mΩ/m	40 mΩ/m
100 KHz	5 mΩ/m	50 mΩ/m	60 mΩ/m	40 mΩ/m
1 MHz	12 mΩ/m	50 mΩ/m	60 mΩ/m	40 mΩ/m
10 MHz	80 mΩ/m	50 mΩ/m	80 mΩ/m	40 mΩ/m
100 MHz	130 mΩ/m	30 mΩ/m	110 mΩ/m	80 mΩ/m
SHIELDING ATTENUATION (Per IEC 62153-4) (Min values for 1/2 inch diameter shields)				
FREQUENCY				
1 GHz	38 dB	55 dB	48 dB	40 dB
3 GHz	40 dB	60 dB	55 dB	35 dB
5 GHz	44 dB	60 dB	60 dB	45 dB
8 GHz	40 dB	50 dB	60 dB	40 dB
WEIGHT	**70.9 g/m**	**14.4 g/m**	**12.1 g/m**	**20.3 g/m**

The table at left is a useful summary of MasterWrap™ shielding performance compared to NiCu and lightweight braid. Transfer impedance and shielding attenuation data is supplied for 1/2" diameter test samples. At high frequencies, both LWB and MasterWrap™ provide comparable and even superior performance to nickel-copper due to reduced windowing and superior optical coverage with significant reduction in weight. Further improvements in high-frequency shielding attenuation can be achieved using conductive tape wraps and/or via hybrid blends of LWB and NiCu.

MasterWrap™ ArmorLite: flexible, lightweight wraparound EMI/RFI shielding

for long runs and spot coverage

Glenair®

SPACE-GRADE

Complex Cable Assemblies

Commander Ed White on the first American spacewalk, 1965 with Glenair-manufactured "Golden Umbilical" cable

We like to begin our presentation of Glenair's proven-performance space-grade products with the golden umbilical life support cable used by Commander Ed White in the first American space walk in 1965. This was a complex cable assembly with an exacting set of performance requirements. Even though this application is now over 50 years old, it still reflects Glenair's design and fabrication expertise and that we have been a go-to supplier for the space industry for almost 5 decades. Today we continue to fabricate high-performance cables for space, from rugged Viton® overmolded designs to ultra-lightweight SpaceWire jumpers for the high-speed space data transmission protocol. Other notable space cable applications include:

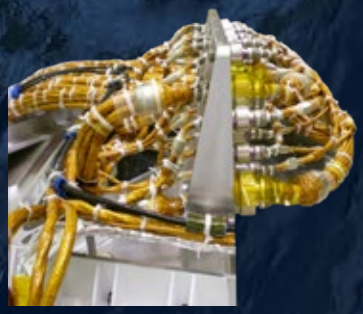
- Dozens of robotic spacecraft, including orbiters, landers, and rovers, have been launched to Mars since the 1960s. Glenair cables have ridden along on several, helping to fulfill navigation, data and communication requirements.
- Complex interconnect cable assemblies made by Glenair have also traveled to and from orbit dozens of times on the Space Shuttle, as well as numerous space-launch vehicles. Glenair-made interconnect harnesses also served on all twelve manned Gemini capsules.

PROVEN PERFORMANCE IN SPACE

- The "Golden Umbilical" life-support cable
- JPL Mars probes (orbiters, landers, and the Curiosity rover)
- AIRS satellite
- Gravity Probe mission
- Space Shuttle
- Titan II launch vehicles
- SpaceWire (MIL-DTL-83513)

COMPLEX MULTIBRANCH AND OVERMOLDED CABLE ASSEMBLIES

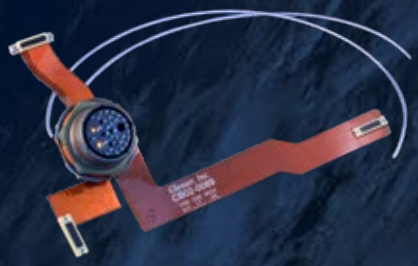
Multibranch wire harness for a space lab application



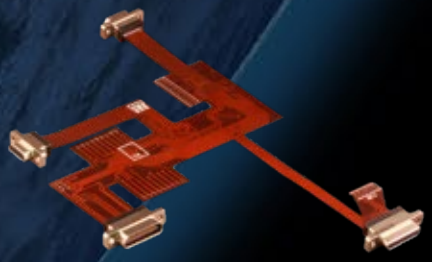
Complex Mighty Mouse cable harness for a Mars rover application

ESA and NASA screened Micro-D/Nano cable assembly

Space-grade Micro-D flex assemby with NASA EEE-INST-002 screening



Hybrid flex/rigid flex multibranch Micro-D flex assembly with discrete RF circuits



Micro-D subminiature multibranch flex assembly

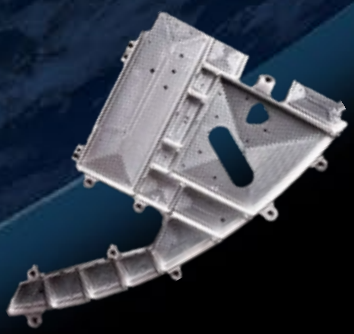
TURNKEY FACTORY-TERMINATED CONDUIT ASSEMBLIES

Complex multibranch high altitude electrical wire conduit assembly

Lightweight, halogen-free wire conduit assembly

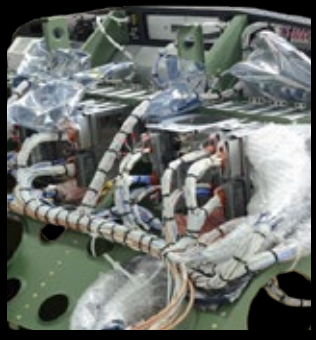
Crush-resistant aerospace metal-core conduit assembly

AEROSPACE-GRADE INTEGRATED SYSTEMS



Precision-machined, injection molded or stamped-and-formed boxes and structural members

Military-aerospace and space-grade multibranch interconnect cable assembly staff and facilities



Turnkey integrated system assemblies

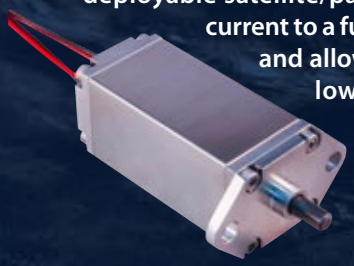
SERIES 06 HDRM

Pyrotechnic-Free Space Mechanisms

Glenair pyrotechnic-free release mechanisms offer quick release time, low shock, relatively low power input, and virtually no temperature sensitivity. Series includes separation nuts, HDRMs, pin pushers, and pin pullers—direct wired or connectorized—with higher preload carrying capacity compared to competitor solutions.

High-reliability, non-explosive (split-spool) HDRMs, separation nuts, and pin pullers/ pushers for dependable stowage and release of deployable space systems

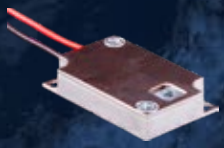
Glenair HDRM space mechanisms are optimized for foolproof release reliability with built-in mechanical and electrical redundancy. The planned release of the deployable satellite/payload is activated by a pre-determined value of electrical current to a fuse-wire system which causes the wire to break under tension and allows a pre-loaded mechanical bolt to actuate. Glenair's line of low-shock, redundant and non-redundant space mechanims includes both HDRM devices as well as a family of pin pushers and pin pullers. Customer-defined housing and mounting configurations are available. Consult factory for specific device TR level and qualification test reports.



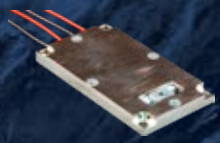
- **Pyrotechnic-free alternative (low-shock fuse-wire) for single-event release of deployable space systems—electrical initiation up to 5 amps**
- **User-serviceable and refurbishable units**
- **Redundant or non-redundant actuation circuit**
- **Not susceptible to transient and noise (EMI/ EMP/ESD/RFI) inputs**
- **Extended temperature ranges: -150°C to +150°C**

HDRM CATALOG PRODUCT SELECTION GUIDE

Note: Preloading assembly, release actuator, and load-carrying structure may also be custom-packaged per customer requirements



061-002
Light-Duty HDRM
Non-redundant circuit,
5 or 20 lb release preload



061-003
Light-Duty HDRM
Redundant circuit,
30 lb release preload

061-014
Light-Duty HDRM
Non-redundant circuit,
75 lb release preload,
Side load bearing

061-007
Medium-Duty HDRM
Redundant circuit,
300 lb release

061-006
Medium-Duty HDRM
Redundant circuit,
1000 lb release preload

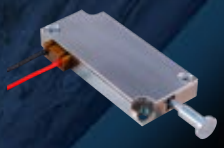
061-005
Medium-Duty HDRM
Redundant circuit,
2500 lb release preload

062-002
Heavy-Duty HDRM
Redundant circuit,
5000 lb release preload

063-001
Heavy-Duty HDRM
Redundant circuit,
8750 lb release preload

064-001
Heavy-Duty HDRM
Non-redundant circuit,
20,000 lb release preload

061-010
Light-Duty Pin Pusher
Non-redundant circuit
6 lb push force



061-009
Light-Duty Pin Puller
Non-redundant circuit
18 lb pull force

061-011
Light-Duty Pin Puller
Non-redundant circuit
18 lb pull force

061-013
Medium-Duty Pin Puller
Redundant circuit
50 lb pull force

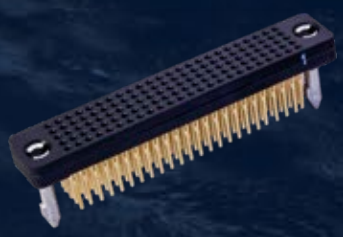
HD STACKER™

High-density, solder-free, PCIe-ready board-to-board stackable connectors

Mission-critical board-to-board connector applications demand fail-safe signal integrity as well as rugged and reliable harsh-environment performance. The HD Stacker™ brings Glenair innovation to stacking board-to-board connectors with several significant design improvements: Ultra high-density .0625" Chevron Contact System provides 55% more contacts per connector size, or a 31% size reduction for the same number of contacts as compared to current industry solutions. Polarized connector bodies and available polarized guide pins prevent accidental mismating. The solder-free press-fit compliant pin contacts are removable, repairable, and available in custom lengths. HD Stacker™ connectors may also be ordered with pre-wired cable or flex jumper terminations. High-speed signal integrity test reports are available upon request. Choose HD Stacker™ for the ultimate in high-density, rugged board-to-board stackable connector performance.

- High-density .0625" pitch Chevron Contact System
- PCIe Rev 3 capable
- Signal integrity to 10.5Gb/sec.
- Polarized insulator and hardware options
- Solder free "eye of the needle" compliant tail for press fit installation
- High-temp PPS insulator meets NASA outgassing requirements
- Available wired / flex jumpers
- Available between-board spacers up to 1 inch

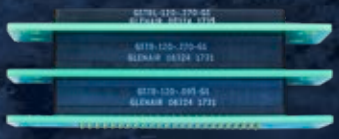
HD STACKER™ FOR MISSION-CRITICAL BOARD-TO-BOARD APPLICATIONS



Solder-free press-fit (compliant pin) board mounting

.0625" pitch contact spacing: highest available density

Polarized shells and keyed guide pin hardware prevent mis-mating



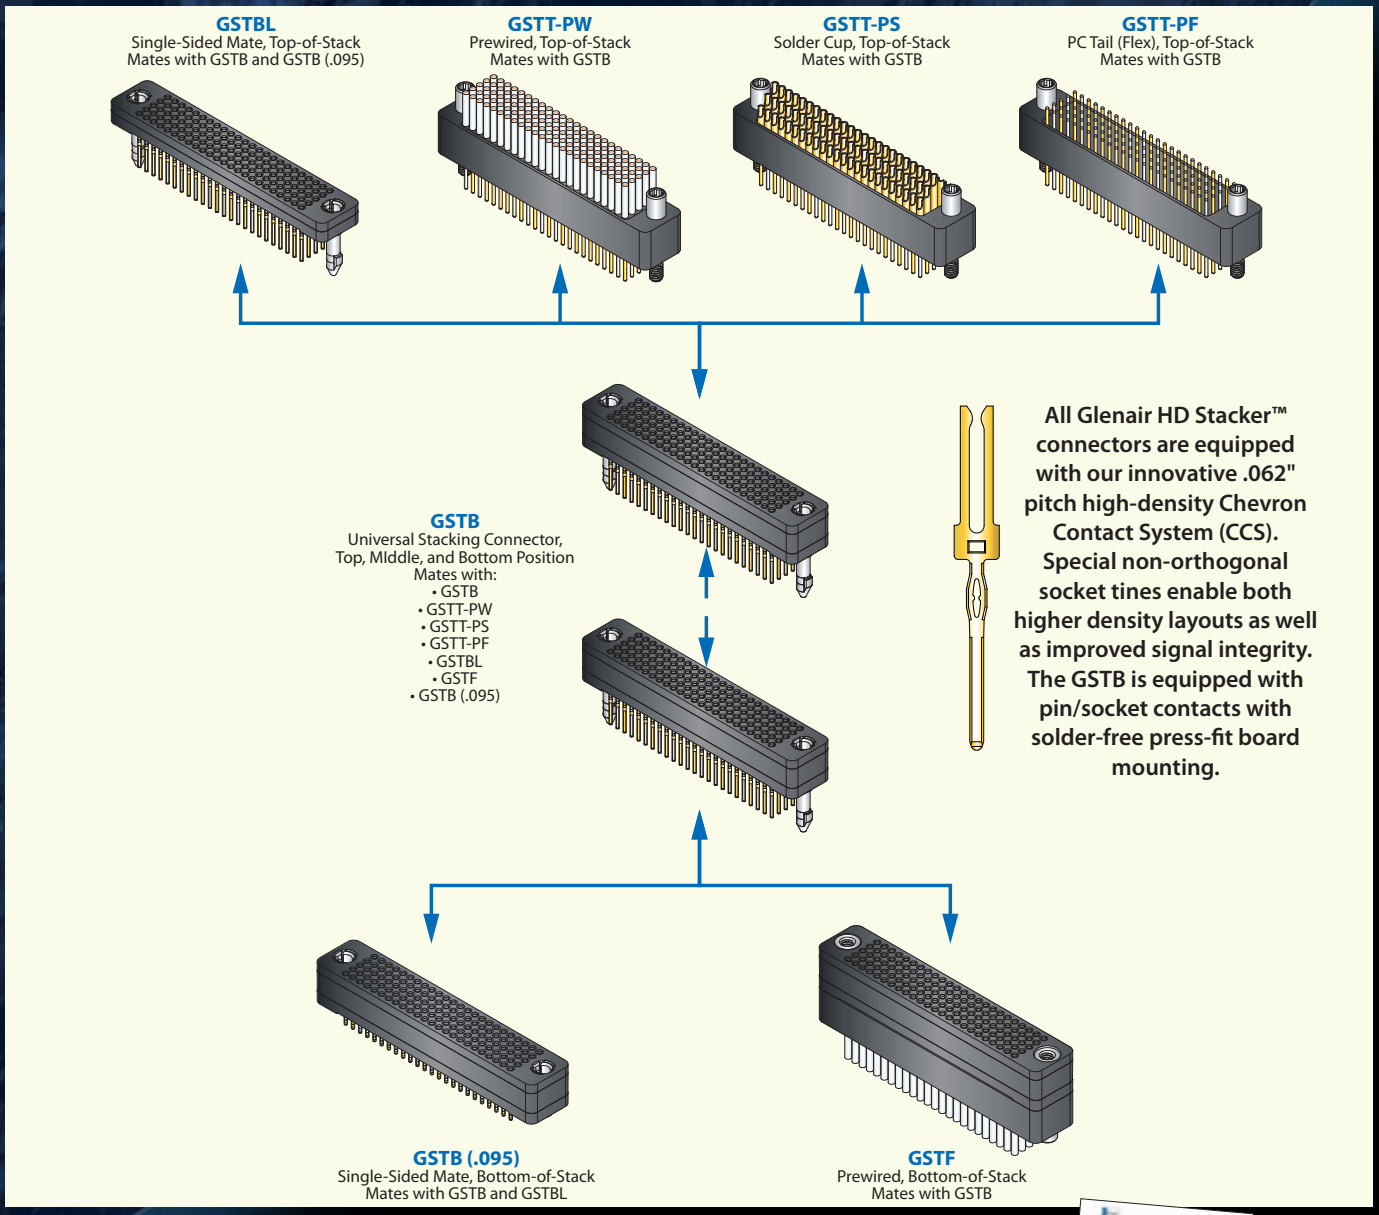
Controlled signal integrity for differential applications (PCIe Rev 3 capable)

.0625” PITCH COMPLIANT PIN

High-Density Stacker™

Rugged board-to-board stackable connectors

HD STACKER™ POSITION AND MATING COMPATIBILITY GUIDE



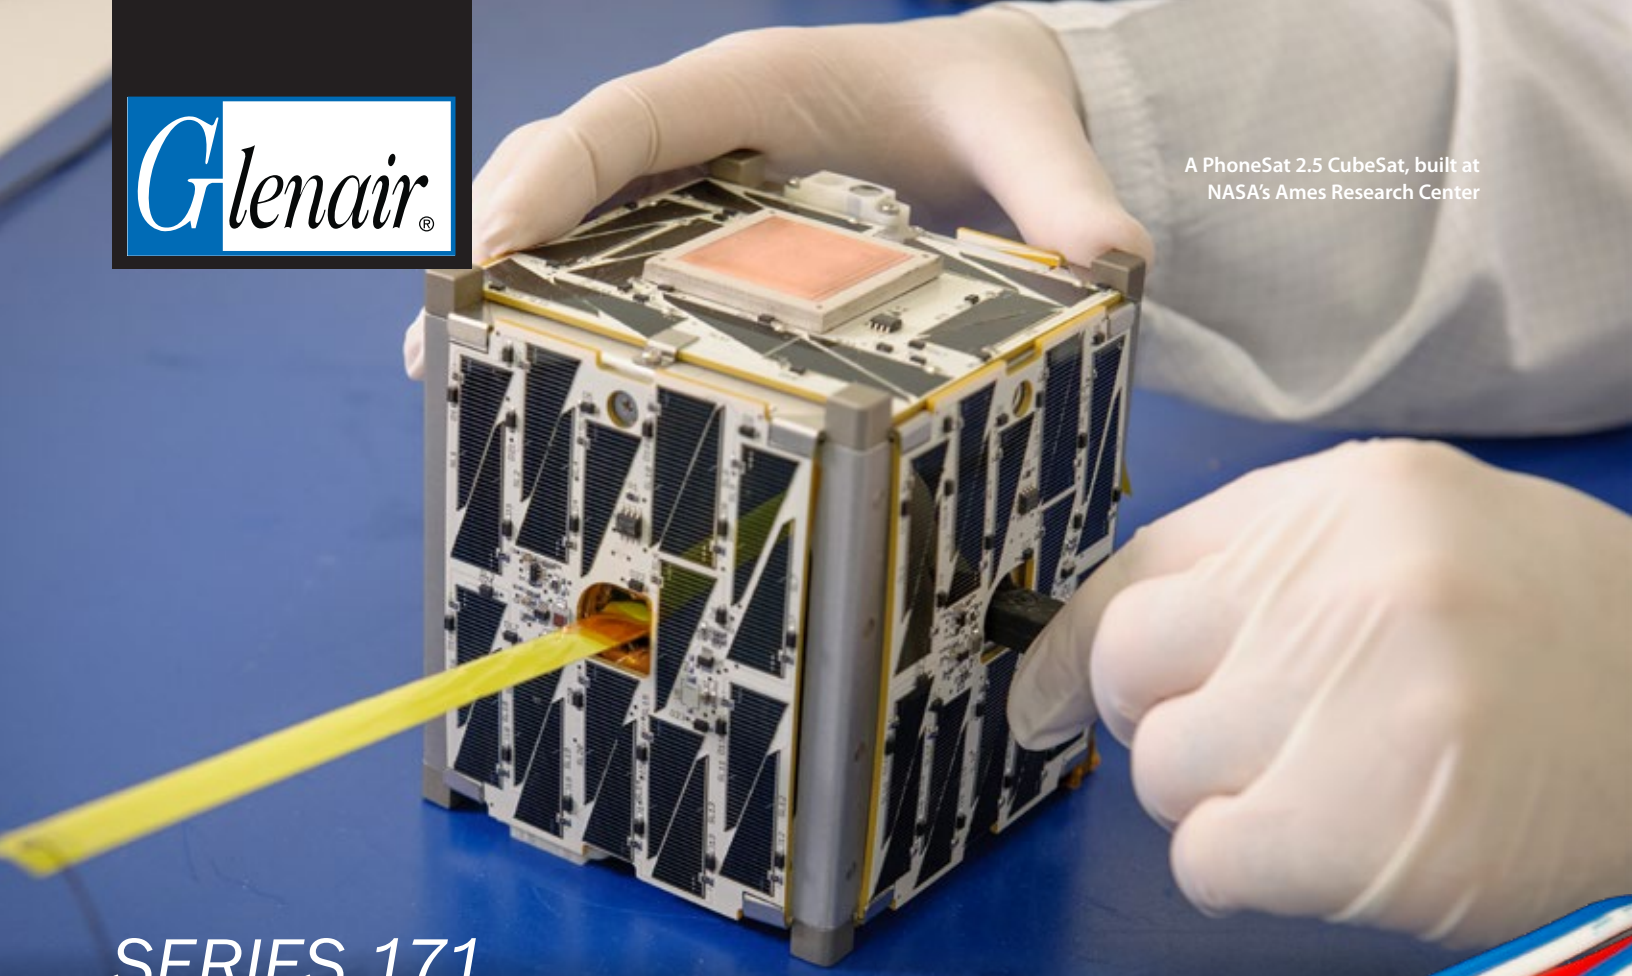
All Glenair HD Stacker™ connectors are equipped with our innovative .062" pitch high-density Chevron Contact System (CCS). Special non-orthogonal socket tines enable both higher density layouts as well as improved signal integrity. The GSTB is equipped with pin/socket contacts with solder-free press-fit board mounting.

QUALIFICATION TESTING / HIGH-SPEED PERFORMANCE

Stacker connectors were qualified in accordance with MIL-DTL-55302G testing for:

- Contact engagement/separation
- Contact retention
- DWV
- Electrical resistance
- Mechanical vibration and shock
- Insulation resistance
- Thermal shock
- Contact resistance
- Humidity

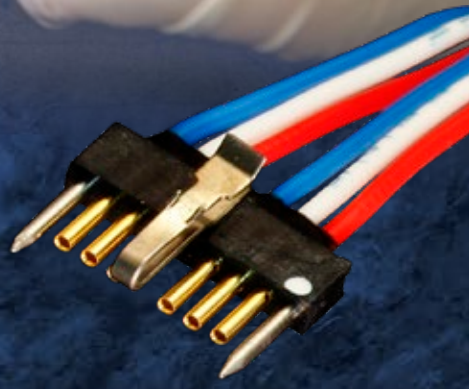
High-frequency electrical performace tests were performed for: Insertion loss, return loss, crosstalk, and time domain performance metrics including impedance and eye pattern. Complete test reports are available at **www.glenair.com/technical_information_test_reports**



A PhoneSat 2.5 CubeSat, built at NASA's Ames Research Center

SERIES 171

Latching MicroStrips™

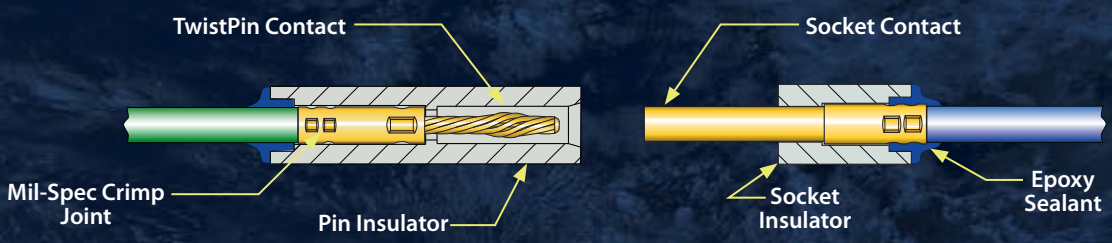


TwistPin performance and durability in an economical, space-saving single row package

Series 171 MicroStrips™ are made for high-reliability wire-to-board and wire-to-wire applications. These high-density strip connectors are typically used in ruggedized 3 Amp signal applications, where higher-performance contacts, precision machined shells and space-grade dielectrics offer significant advantages compared to commercial-grade headers and jumpers. Glenair's rugged, high force TwistPin contact accepts up to #24 gage wire, the current rating is 3 Amps, the voltage rating is 600 Vac, and the temperature rating is -55C to +150C. The Series 171 Latching MicroStrip connector meets all applicable requirements of MIL-DTL-83513. Choose solder cup, pre-wired, or printed circuit board versions. A stainless steel latch provides secure coupling.

- High-reliability TwistPin contact system
- #24-30 AWG wire size
- .050" pitch contact spacing
- Solder cup, pre-wired or PCB header terminations
- 3 Amps, +150C, 600 Vac

LATCHING MICROSTRIP™ CROSS-SECTIONAL VIEW



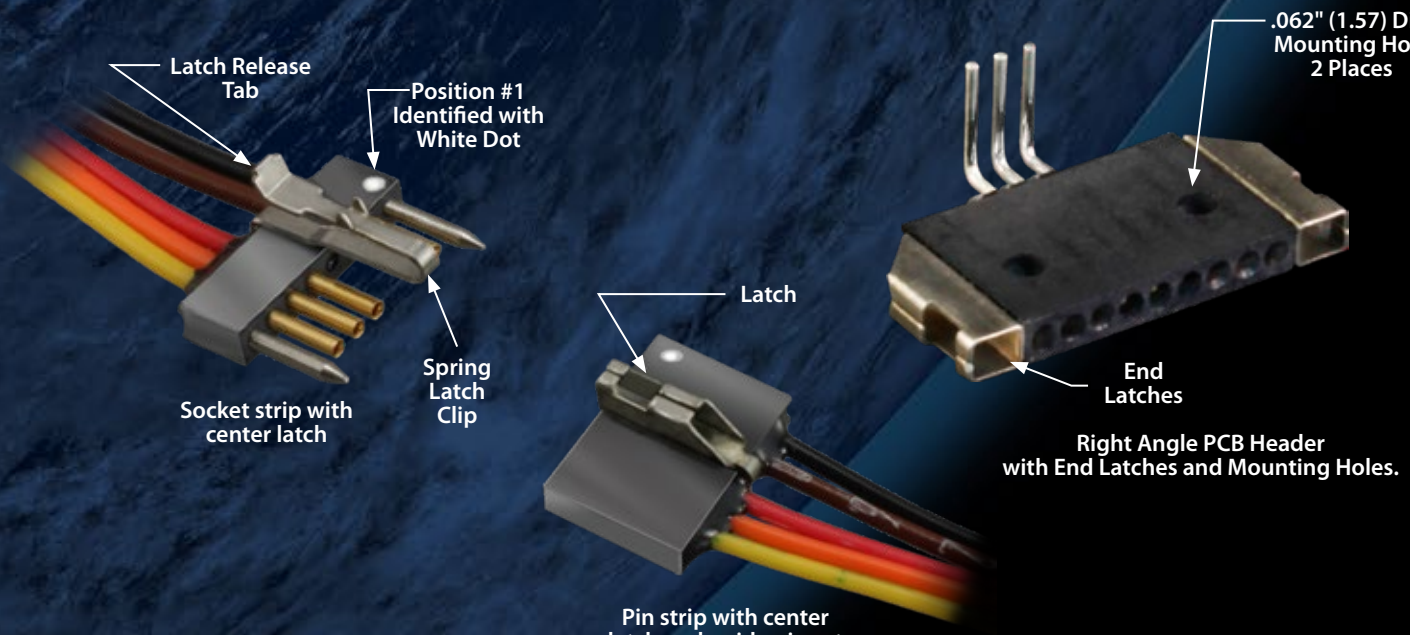
SERIES 171

Latching MicroStrips™

Superior TwistPin contact performance

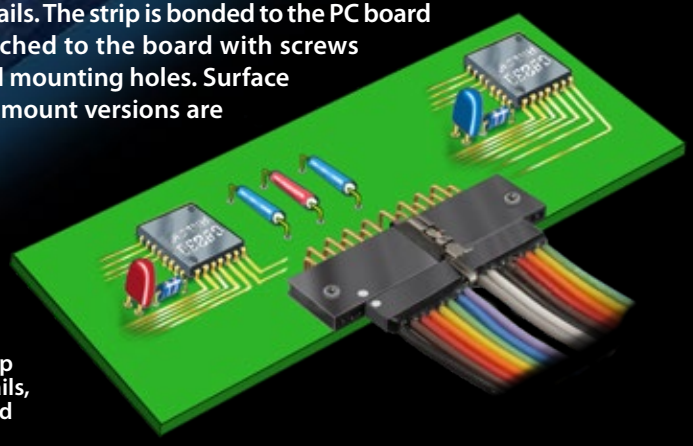
ABOUT SPRING LATCHES, GUIDE PINS AND MOUNTING HOLES

Optional stainless steel latch clips provide secure mating when subjected to shock and vibration. A single center latch is suitable for most applications. Dual end latches are also available. The spring latch is always installed on the socket strip. The latch receiver is installed on the pin strip. To unmate the connectors, simply press the release tab while pulling the connectors apart. MicroStrips™ are available with stainless steel guide pins. A single guide pin provides circuit polarization. A guide pin on each end helps to align connectors when mating and prevents damage to contacts. For most applications the preferred configuration is a single center latch with no guide pins. Mounting holes are now available. Attach strips to circuit boards with size 0-80 screws (customer-supplied).



ABOUT BOARD MOUNT STRIPS

Space customers typically use MicroStrips™ for high reliability board-to-wire I/O applications. The pin strip is usually configured with right angle thru-hole PC tails. The strip is bonded to the PC board with epoxy, or attached to the board with screws installed in optional mounting holes. Surface mount and vertical mount versions are also available.



Right angle pin strip with staggered PC tails, mounting holes and center latch

SINGLE ROW BACK-TO-BACK MICROSTRIPS

Physical layer SpaceWire router aboard the James Webb Space Telescope (NASA)

SpaceWire Cable Assemblies

Flight- and lab-grade SpaceWire qualified cable assemblies for IEEE 1355 space network node interconnection of routers, switches, recorders, transceivers, and other physical layer devices

The success of any space mission begins with reliable data transmission and Glenair Spacewire cables, built to meet the strict standards set forth by ECSS-E-ST-50-12C make this a reality. Our Spacewire cables offer bidirectional, high speed data transmission rates up to 400 Mbits/s while significantly reducing cross talk, skew, and signal attenuation. By incorporating a serial, point-to-point cable, with low voltage differential signaling (LVDS) reduced costs are realized through an easily integrated data transmission cable. These features allow Spacewire cables to be incorporated across various satellite data transmission programs without the expense of costly design customization.

Glenair Spacewire assemblies begin with a high performance cable built with expanded polytetraflouroethylene (ePTFE) insulation. This material allows for low-loss transmission of LVDS signals, maximizing data-rates while allowing for the implementation of standard hardware protocols, thus eliminating the need for design customization and long lead time cable projects.

TYPICAL USES INCLUDE

- EGSE applications
- Radar sensor systems
- Hi-resolution camera equipment
- Sensor, mass-memory unit, and telemetry subsystem interconnections

APPROVED FOR USE BY:

- ESA
- NASA
- JAXA
- RKA

CONNECTOR/CABLE

- **Laboratory and space-grade versions available**
- **Qualified MIL-DTL-83513 Micro-D connectors**
- **Gold-plated copper alloy TwistPin contacts**
- **Basic cable, 4 twisted pair cables and a ground**
- **Epoxy resin potting**
- **EMI banding backshell**

PERFORMANCE

- **3 Amps**
- **Temperature tolerance -200° to 180° C**
- **100 Ω impedance shielded signal pair**
- **Very low skew, signal attenuation and crosstalk**
- **65dB minimum attenuation shielding effectiveness**
- **Low magnetic permeability IAW EIA-364-54**

POINT-TO-POINT AND SINGLE-ENDED

SpaceWire cable assemblies

Technical specifications / how-to-order

NOTES:

1. Flight grade (cable Type F) assemblies to be screened IAW NASA EEE-INST-002, Table 2. Level 1 with 100% thermal vacuum outgassing (24 hours/+125°C/10^{-6} torr). Reference Glenair Mod Code 429C.
2. Operating temperature - 200°C to +180°C. Reference Glenair Mod Code 428.
3. Electrical performance:
   Dielectric withstanding voltage: 600 VAC.
   Insulation resistance: 5000 megohms @500 VDC.
4. Assembly to be identified with Glenair's name, Part Number, Cage Code and Date Code or ESCC Component Part Marking Standards.

MATERIALS/FINISH:

- Shells/backshells - aluminum alloy/electroless nickel.
- Insulators - high grade rigid dielectric/N.A.
- Contacts - copper alloy, gold plated.
- Hardware - stainless steel/passivated.

ADVANCED-PERFORMANCE

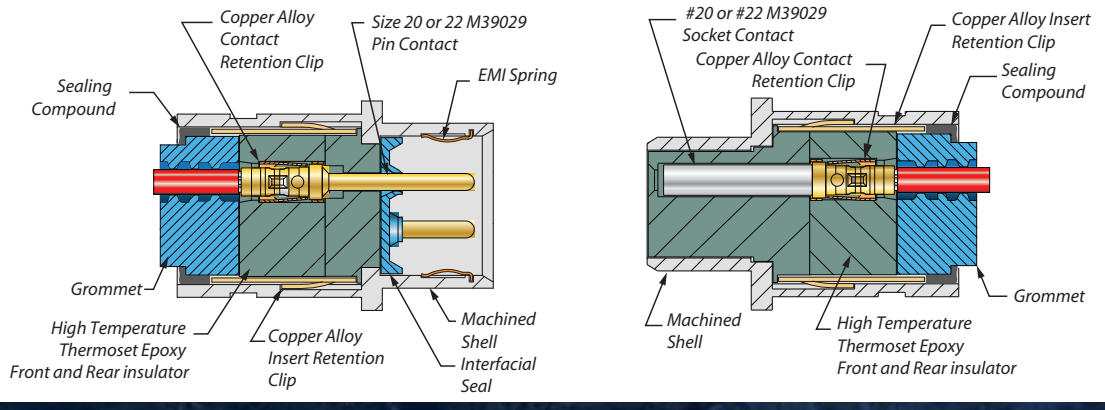
HiPer-D Connectors

Space-grade M24308 intermateable

The HiPer-D connector is a M24308-type D-Subminiature connector with superior design features. Unlike standard M24308 connectors with stamped steel shells, the HiPer-D connector features a one-piece machined shell, 200°C continuous operating temperature rating and enhanced, mated shell EMI/RFI protection via an integrated ground spring. Aerospace grade fluorosilicone grommets and face seals (JAXA / NASA outgassing available) provide environmental protection. The HiPer-D is intermateable, intermountable and interchangeable with standard M24308 D-Sub connectors.

- **Advanced temperature, vibration and EMC/ electrical performance**
- **11 standard and 20 combo insert arrangements**
- **High temperature epoxy insulators**
- **Watertight sealing**
- **Rugged machined one-piece shell**

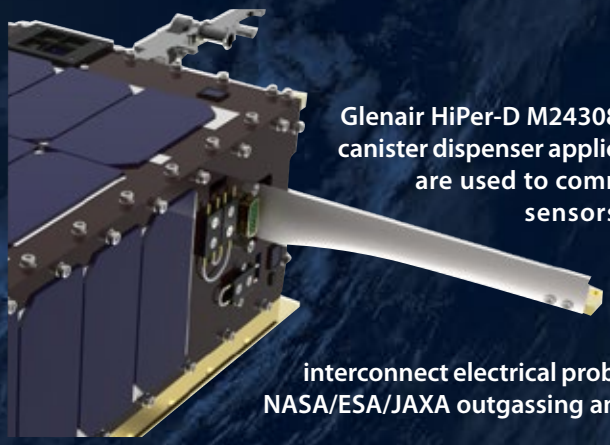
STANDARD AND HIGH DENSITY HiPer-D® - CUTAWAY



SERIES 28

HiPer-D Space Grade Connectors

Product features and specifications



Glenair HiPer-D M24308 D-sub connectors are ideally suited for CubeSat or NanoSat canister dispenser applications where rack and panel or connectorized wire assemblies are used to communicate with HDRMs, pin pullers, pin pushers, door status sensors, as well as system communications and testing prior to deployment of satellite equipment. Standardized usage of M24308 connectors on hardware interfaces simplifies interconnection and communication. Glenair HiPer-D space grade M24308 D-sub connectors eliminate potential interconnect electrical problems on mission critical systems. Connectors are supplied with NASA/ESA/JAXA outgassing and screening in accordance with NASA EEE-INST-0002.

Series 806 Mighty Mouse Mil-Aero Connectors

SPACE GRADE
NASA
ESA, JAXA
SCREENED

Advanced electrical, mechanical and environmental performance *plus reduced size and weight* compared to D38999

Series 806 offers significant size and weight savings while meeting key performance benchmarks for a broad range of applications such as commercial and military aerospace, industrial robotics, transportation systems and more. Designed for general use in harsh vibration, shock and environmental settings—as well as high-altitude, unpressurized aircraft zones with aggressive voltage ratings and altitude immersion standards—the Series 806 Mil-Aero features numerous mechanical design innovations including durable mechanical insert retention, radial seals and triple-ripple grommet seals. Its reduced thread pitch and re-engineered ratchet prevent decoupling problems, particularly in small shell sizes, solving one of the major problems of shell size 9 and 11 MIL-DTL-38999 Series III connectors.

- **Next-generation small form factor aerospace-grade circular connector**
- **Designed for general use in harsh application environments such as aircraft, industrial robotics and more**
- **Upgraded environmental, electrical and mechanical performance**
- **Integrated anti-decoupling technology**
- **Higher density 20HD and 22HD contact arrangements**
- **Glass hermetic, lightweight aluminum hermetic, and filtered versions**
- **+200° C temperature rating**

Product Features

KEY FEATURES

- Next-generation high performance ultraminiature aerospace connector
- Reduced pitch triple-start 60° modified anti-decoupling stub ACME thread
- Higher density 20HD and 22HD contact arrangements
- +200°C operating temperature
- High strength 7075 alloy plug barrel
- "Triple ripple" wire sealing grommet (75,000 ft. rated)
- Snap in, rear release crimp contacts
- Metal contact retention clips
- Integral Nano-Band shield termination platform
- EMI shielding effectiveness per MIL-DTL-38999M para. 4.5.28 (65 dB min. leakage attenuation @ 10GHz)
- 10,000 amp indirect lightning strike
- 300g. shock
- MIL-S-901 Grade A high impact shock
- Aluminum and stainless steel versions
- Environmental crimp contact, glass-to-metal seal PC tail and solder cup hermetics, and EMI filter versions
- RoHS compliant nickel, nickel-PTFE, black zinc and stainless steel plus mil-grade cadmium finish options
- Printed circuit board versions with threaded flange

HIGH PERFORMANCE

Series 791

The next-generation ultraminiature rectangular connector for demanding aerospace applications

Polarized / keyed shells prevent mis-mating and allow designers to specify identical layouts side-by-side without risk of circuit damage

Sometimes the simplest ideas are the best ideas. The Series 791 is a simple idea. Let's create a brand new class of connector – the ultraminiature rectangular. Let's combine the versatility of the Series 790 Micro-D type connector with the rugged features of our popular HiPer-D M24308 type connector. Let's add a unique dual lobe shell and let's recess the pins to eliminate the possibility of scooping damage. Let's add high speed datalink capability.

Originally designed for NASA's Orion project, the 791 is qualified for manned space flight. The 791's small size and blind mate capability make it a perfect choice for 2U and 3U electronics modules. Applications include radars, weapons systems, comms gear, satellites, exoatmospheric vehicles, avionics, power distribution units, instrumentation, and everywhere else in need of a smaller, higher performance interconnect system.

- **Next-generation small form factor aerospace-grade rectangular connector**
- **Scoop-proof recessed pin contacts**
- **37 arrangements, 12 shell sizes for the ultimate in versatility**
- **Rugged aluminum alloy dual lobe shell**
- **Environmental**
- **EMI shielded**
- **Blind mating**

Save Size and Weight with Series 791 Connectors

The Next Generation Ultraminiature Rectangular Connector for Demanding Aerospace and Defense Applications

About The Series 791

The Series 791 is an aerospace-grade ultraminiature rectangular connector with EMI protection and environmental sealing. Originally developed for NASA's Orion capsule, The 791 is qualified for manned space flight and is ideal for radars, weapons systems and avionics gear.

The Series 791 is available either with crimp pins or with printed circuit terminals. Machined aluminum alloy shells feature dual lobes for polarization. Contact sizes range from size 8 to size 23 in 37 arrangements. Pin contacts are recessed to prevent scooping damage while mating. Crimp contacts conform to M39029 requirements and are rear release.

An optional ground spring reduces susceptibility to EMI problems. Fluorosilicone face seals and wire grommets prevent moisture and contamination. Panel mount versions are available with an O-ring, or for improved panel bonding, a metal spring.

Board mount versions include straight or right angle terminals. Right angle PCB connectors feature an aluminum shroud covering the terminals.

Hardware options include screwlocks, jackscrews or guide pins for blind mate applications.

M-17P17 with size 16 contacts

- **Two to 102 contacts**
- **Coax, twinax, quadrax and Ochito octaxial contacts**
- **Rugged aluminum shell with dual polarizing lobes**

Shell size A – the smallest 791

- **Integral band platform for direct attachment of cable braid**
- **-65°C to +150°C**
- **Panel mount versions with O-ring or EMI spring**

- **37 contact arrangements**
- **Crimp-and-poke or epoxy-sealed board mount versions**
- **Scoop-proof recessed pins**
- **Size 23, 16, 12 and 8 contacts**

- **Straight and right angle printed circuit board mounting**
- **12 shell sizes**
- **Guide pins for blind mate modules**

- **Contacts meet SAE AS39029 requirements**
- **Internal ground spring for EMI protection**
- **Approved for manned space flight**

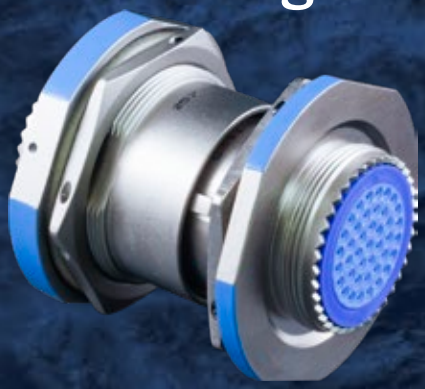
Blind-Mate Connectors

Rack and Panel Sealed, Assisted Kick-off and Feed-Through Blind-Mate to D38999



Application: Glenair Series 253 connectors are designed to meet applicable environmental, electrical and mechanical performance characteristics of D38999 Series III. The technology is well suited for use in commercial blind-mate instrumentation panels, satellite deployment, scientific research and development payloads, as well as interstage, UAV, and munitions release applications.

- **Blind-mate, float mount interconnects for non-ITAR commercial as well as military/defense applications**
- **Optional assisted release (spring force) solutions to overcome pin/socket engagement force**
- **Panel-mount versions feature self-aligning float-mount technology for repeatable mating and de-mating**
- **Available in most symmetrical MIL-STD-1560 insert arrangements with contacts sizes from #23 to #12**
- **Selected materials offer low outgassing properties and high resistance to both corrosion and stress corrosion cracking**
- **Optional outgassing bake-out process available**
- **Designed to withstand the rigors of launch and flight—including shock, vibration, thermal vacuum, acceleration, and temperature extremes**
- **Standard accessory threads and teeth per MIL-DTL-38999 accommodate a wide range of backshell accessories**

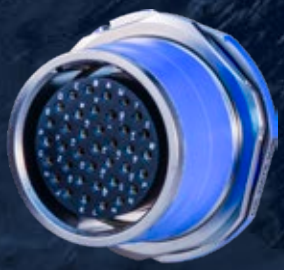
CRITICAL MECHANICAL FEATURES OF BLIND-MATE CONNECTORS WITH ASSISTED SEPARATION FORCE (ASF) AND MISALIGNMENT ACCOMMODATION

Roll-off nose: allows for the smooth disconnection of a blind mate connector. Without this feature, connectors can catch or hang during mate and demate.

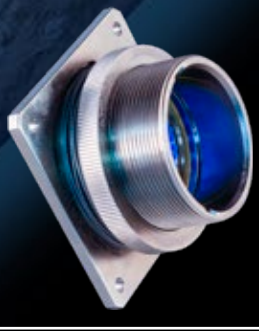
Misalignment accommodation: Radial, axial, and angular misalignment in blind-mate applications is resolved in the receptacle design with mechanical float mounting and integral wave form springs.



Sealing: Integrated misalignment accommodation makes environmental sealing difficult in blind mate circulars. Glenair SuperNine® blind-mate and assisted release connectors are available with auxiliary exterior seals.

EMI shielding: Glenair blind-mate circulars are available with auxiliary ground springs on receptacles, and ground fingers on plugs (shown), to optimize 360° shell-to-shell continuity.

Assisted separation: Spring-loaded kick-off posts are designed to overcome contact separation force (normal force) with adjustable flange-mounted springs. Separation force may be calibrated IAW application requirements and insert arrangement.



Assisted separation: Adjustment ring on receptacle shells provides reliable and repeatable calibration of assisted separation force. The adjustment ring interfaces directly with the spring-loaded kick-off posts on the plug. A set screw fitting locks the ring in place after adjustments have been made.

PRODUCT SELECTION GUIDE

SPACE-RATED

Lanyard-Release Quick-Disconnect Connectors

AS81703 space-grade lanyard release push pull mated pair with special order band and boot platform

For mission-critical disengagement and release of launch and payload systems

Mil-standard 1760 lanyard-release connectors were originally developed for carriage stores management applications including weapons, pods, and drop tanks. Incorporating a common electrical interface as well as interfacing signals and pin and circuit assignments, lanyard-release connectors of this type are broadly employed for reliable, jam-free mating and disengagement. Space-rated versions of 1760 class cylindrical connectors take advantage of the technology's legacy in harsh-duty aircraft applications to ensure reliable and predictable performance in space. From fail-safe application in space station and space telescope deployment to rack-and-panel research equipment interconnection, these rugged axial-pull lanyard connectors deliver proven performance in accordance with all applicable NASA, ESA, and JAXA standards. Available in a wide range of connector packaging, from MIL-DTL-38999 SuperNine® to AS81703* and special small form-factor designs, these proven-performance interconnection devices may be equipped with standard signal or power contacts as well as shielded high-speed coax, twinax, and quadrax.

- **Jam-free, push on/pull off technology**
- **Reliable fail-safe axial pull lanyard equipped coupling**
- **Instant disengagement for critical quick-release systems**
- **Manufactured IAW MIL-STD-1760**
- **Special umbilical buffers and go-betweens also available**
- **Blind-mate rack-and-panel versions available**
- **Qualified for military and space application**
- **Outgas processing IAW NASA, ESA and JAXA**

CIRCULAR AND RECTANGULAR

Backshells and Connector Accessories

Corrosion resistance, weight reduction, environmental durability and design innovation

Nowhere in the world does anyone manufacture and supply such a complete selection of backshell connector accessories—for space as well as all other mission-critical applications. In addition to traditional metal materials, Glenair also manufactures an extensive line of lightweight, corrosion-free composite thermoplastic interconnect components ideally suited for systems requiring electromagnetic compatibility, long-term durability and weight reduction.

The Glenair Qwik-Clamp connector accessory shown here is used on the International Space Station. This gold plated part is extremely resistant to space corrosion and radiation and is designed with all smooth surfaces to eliminate potential damage to space suits.

QPL qualified

- **High-performance connector accessories for every environmental, mechanical and electromagnetic shielding requirements**
- **Qualified to AS85049, SSQ 21635, 21636, 22698 and 22681 and other standards and specs**
- **EMI shield termination, cable strain relief, connector protective covers and more**
- **Lightweight composite versions**
- **QPL'd AS85049 backshells**
- **Tens of thousands of popular part numbers in inventory ready for same-day shipment**

Reference Applications

Brief history of Glenair space-grade design-ins

Atmospheric Infrared Sounder (AIRS)

Glenair-built cables provide signal and power interconnection on a broad range of space applications including The **Atmospheric Infrared Sounder (AIRS)** instrument aboard the Aqua Earth-observing satellite, JPL Mars Probes, the Space Shuttle, and the AIRS satellite. Several notable space applications include:

The **Gravity Probe**, confirmed two key predictions of Einstein's general theory of relativity in 2011 by monitoring the orientations of ultra-sensitive gyroscopes relative to a distant guide star. Glenair-built cables are on board.

Gravity Probe

Titan II space-launch vehicles, with Glenair-made interconnect harnesses, propelled all twelve manned Gemini capsules.

Hermetic connectors are ideal for high-pressure/low-leakage applications in air, sea and space environments. Made of stainless steel (CRES) with glass insulators fused to the connector shell, and suitable contacts meeting a leak rate of 1 X 10^{-6} cubic centimeters of Helium per second, these mounted receptacle connectors and bulkhead feed thrus prevent gases from travelling through apertures or penetrations created for the routing of interconnect cabling. Glenair hermetics have protected a range of space programs including:

The **X-38** program implemented to design and build a spacecraft capable of flying itself and the Space Station crew back to Earth in an orbital emergency.

The X-38

Pegasus rockets, the winged space booster vehicles used in an expendable launch system developed by private industry.

MetOp-A, Europe's polar-orbiting satellite dedicated to operational meteorology.

A well designed interconnect system will include a complement of grounding and shielding technologies to insure EMC. ***EMI filter connectors*** are an effective method to achieve electro-magnetic compatibility. Glenair is extremely well versed in supplying filter connector products optimized for use in space-grade applications, providing products compliant to EEE-INST-002, Table 2G, the recognized standard for space grade filters. Glenair MIL-DTL-38999, Series 80 Mighty Mouse, Series 28 HiPer-D, and Series 79 Micro-Crimp filter connectors are currently qualified and used by Ball Aerospace, Boeing Space, NASA/JPL, Orbital Sciences, Sierra Nevada Corp., and others. Notable Glenair Filtered connector space applications include:

MetOp-A

Skynet, for the United Kingdom Ministry of Defence, to provide strategic communication services to the three branches of the British Armed Forces and to NATO forces engaged on coalition tasks.

JWST

The **James Webb Space Telescope (JWST)** is a large, infrared-optimized space telescope. JWST is designed to find the first galaxies that formed in the early Universe, connecting the Big Bang to our own Milky Way Galaxy.

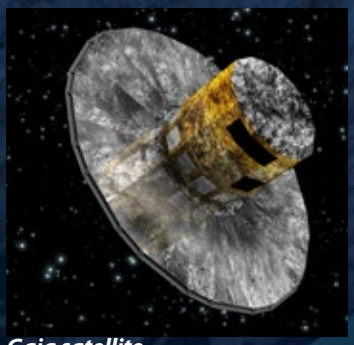
Micro-D connectors, including environmentals, hermetics, filters, and flex assemblies are commonly used in space applications for their high-performance and small size. The precision-machined shell of the Micro-D, with its robust mating retention forces, makes for an ideal connector for rocket and space vehicle applications that are subject to high levels of vibration and shock. The Micro-D is easily customized with package and mounting modification to fit virtually any integration challenge. A short list of Glenair Micro-D space applications would include the James Webb Space Telescope, SkyNet 5 military satellite, ALMA space telescope, JPL Mars Probe, Mars Curiosity Rover, AIRS satellite, and others. Several notable space applications that use Glenair Micro-D connectors include:

Skynet

The **Herschel Space Observatory**, from the European Space Agency, made several scientific discoveries in its operational phase from 2009 – 2013, including a previously unknown and unexpected step in the star formation process, and the presence of molecular oxygen in space.

Herschel Space Observatory

The European Space Agency also developed and built the **Gaia** satellite. Launched in 2013, its mission is to construct the largest and most precise map to date of the Milky Way. Its 2016 data release included positions and magnitudes for 1.1 billion stars

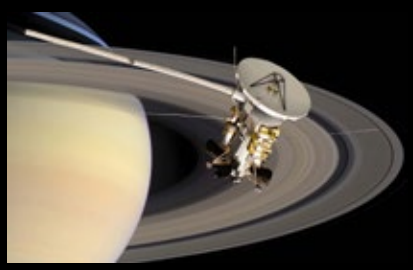


Gaia satellite

Cassini–Huygens was a joint NASA/ESA/ASI robotic spacecraft mission studying Saturn and its moons. Cassini executed several risky passes through Saturn's inner rings before completing its mission by burning up in atmospheric entry—but the data it returned will be analyzed for years to come.

CrIS is an advanced atmospheric sounding instrument aboard the United States Suomi National Polar Partnership (NPP) Polar-orbiting Operational Environmental Satellite. It produces high-resolution pressure, temperature, and moisture profiles from space, enabling more accurate predictions of severe weather events.

***Glenair M32139 Class S Nanominiature* connectors are DSCC approved for space programs. Glenair Nanominiature connectors, cable assemblies and flex circuit assemblies are currently in use on the several space-based telescopes,**



Cassini-Huygens

CrIS NPOESS Satellite

including the **Large Synoptic Survey Telescope (LSST)**, **James Webb Space Telescope**, and others.

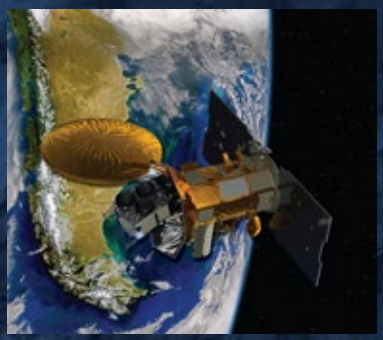
The ***Series 79*** connector is a Glenair original design. It features crimp, rear-release size #23 contacts on 0.075" spacing, as well as size #12 and #16 power and coaxial crimp contacts available in 29 insert arrangements for data and power transmission. The Series 79 Micro-Crimp is ideally suited for blind-mate rack and panel and/or module-to-chassis applications; and is currently qualified for use by Orion, Ball Aerospace, Honeywell Space, and LMCO Denver.

Glenair ***Series 80 Mighty Mouse*** connector and cable assemblies were developed as a smaller and lighter alternative to MIL-DTL-38999, offering virtually equal performance with up to 71% (weight) and 52% (size) savings for similar contact layouts. Mighty Mouse is well established in hundreds of safety-critical military, medical, industrial and geo-physical and space applications. Some space applications for this reduced form factor connector include:

NASA's **Mars Exploration Rover (MER)** Mission, an ongoing robotic mission to explore the Martian surface and geology. The Opportunity rover is continuing her winter exploration of "Perseverance Valley" on the west rim of Endeavour Crater.

A Mars Curiosity Rover "selfie"

The Mars Science Laboratory **Curiosity** landed in Mars' Gale Crater in 2012. This rover is over five times as heavy and carries over ten times the weight in scientific instruments as previous rovers. Within weeks, Curiosity discovered an ancient steambed where water once flowed, and evidence of a lake that could have supported microbial life in the distant past. Curiosity's original 2-year mission has been extended indefinitely, and it's still returning valuable data more than 5 years after landing.

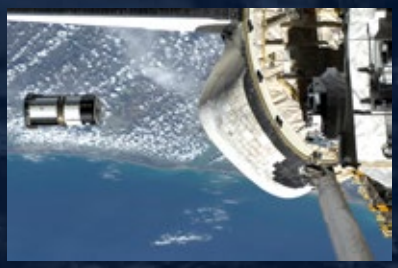


Aquarius Satellite

Aquarius was a satellite mission to measure global Sea Surface Salinity. It provided the global view of salinity variability needed for climate studies.

Glenair ***Sav-Con® Connector Savers*** protect deliverable connectors subject to repeated mating and unmating cycles, especially from repetitive qualification test cycles. Sav-Con® Connector Savers prevent costly repair or replacement of cable plugs and receptacle connectors by absorbing connect and disconnect abuse and by reducing mating cycles during testing to the absolute minimum.

A virtual "Who's Who" of space programs use Glenair Sav-Cons including Boeing Satellite Systems, the Delta IV launch vehicle, Voyager, Galileo, Magellan, Cassini, and others—both during fabrication testing and in operation.



A NASA LEO (Low Earth Orbit) Satellite

One of the most dramatic applications of our Sav-Con connectors is on the **Space Shuttle Orbiter** where they provided protection for the umbilical connectors from liftoff to touchdown on every mission.

For many space applications, the cable shield is the most important element in controlling EMI and radiation damage. Unfortunately, metal shielding—especially when applied in multiple layers—can be extremely

heavy. ***AmberStrand*** composite thermoplastic braid, and ***ArmorLite*** microfilament stainless steel braid provide robust EMI shielding at a fraction of the weight of conventional shielding. Glenair lightweight braid technologies are currently qualified for use by EADS Astrium, Honeywell Space, Orbital Sciences, and Ball Aerospace. These unique products notably served on:

The **Cassini-Huygens** Program, an international science mission to the Saturnian system.

Ariane 5

Mars Pathfinder, which delivered an instrumented lander and a free-ranging robotic rover to the surface of the red planet.

The Glenair ***Qwik-Clamp backshell*** is used on the **International Space Station.** This gold plated part is extremely resistant to space corrosion and radiation and is designed with all smooth surfaces to eliminate potential damage to space suits.

Other circular backshell and connector accessory space applications include:

The European Space Agency's **Ariane 5,** which launches satellites and other craft into geostationary transfer orbit (GTO), medium and low Earth orbits, Sun-synchronous orbits (SSO) and Earth-escape trajectories

SEA Launch was a spacecraft launch service using a mobile sea platform for equatorial launches of commercial payloads.

As with circular backshells and accessories, Glenair has the rectangular interconnect world well covered. We supply everything from miniaturized backshells for Micro-D connectors to larger rack-and-panel connector accessories. Glenair rectangular accessories are used on dozens of space programs including the International Space Station, MetOps, Herschel Space Observatory, James Webb telescope, and others.

Recent / Notable Space-Grade Application Wins for Glenair

Glenair is the exclusive interconnect connector and cable supplier to the Sierra Nevada Dream Chaser reusable crewed suborbital and orbital space plane. The Dream Chaser electrical wire interconnect system incorporates Glenair Micro-D subminiature connectors, EMI filter connectors, flex circuitry, lightweight microfilament braid, metal and composite backshells, and other technologies.

The Glenair Series 28 HiPer-D High-Performance MIL-24308 Intermateable

Glenair's qualified MIL-DTL-24308 Class K space-grade hermetic, and our recently-introduced Series 28 HiPer-D connector series have become the go-to standard for mission-critical space applications and are now qualified for use by Ball Aerospace, LMCO Denver, Orbital Sciences, and others.

SCREENED

Glenair's family of space mechanisms are manufactured in certified cleanrooms. Full qualification test reports are available for every device type. NASA/ESA outgas processing and screening completed on-site. All operations are managed under a single certified quality system with unprecedented levels of performance.

But don't take it from us... take it from NASA

December 5, 2016

Good afternoon Mr. Christopher J. Toomey…and to the Glenair Family

On behalf of the NASA Launch Services Program (LSP) and the Safety and Mission Assurance Division (SMA), I would like to express sincere appreciation for the hospitality afforded our NASA team… last week. It is obvious that your company takes pride and recognizes the value in meeting and even exceeding the intents of the Aerospace Standard AS9100. We came away with a positive sense in the partnership… . You have a remarkable campus facility and a remarkable employee team there in Glendale, and I am sure, throughout your vast network of offices and facilities around the world as well. The Quality leadership has done an outstanding job implementing a working Quality Management System around your successful business model. Thank you for recognizing the importance of this particular supplier audit to NASA… , as we seek crucial information relative to the NASA Certification… .

…I would like to express some of the other very positive comments that our team came away with regarding this audit. All of your employee team should take pride in the quality of your finished product line for your customers. To that end, here is a listing of but a few of our team's observations during the audit process:

1. Welcoming hospitality to customers
2. Informative Corporate Overview Presentation
3. Positive Employee Attitudes about the workplace
4. Informative and thorough process walk-downs
5. Informative and thorough production facility walk-downs
6. Processing area cleanliness and 5S organization
7. Timely Corrective Action and effective Preventive Action plans
8. Top Management involvement and participation in the QMS – AS9100 processes
9. Expertise of the employee team members
10. …and the ability of a randomly selected employee to express the Quality Policy and what it means to him in his position with the company

A formal compilation report is in work, and should reflect the over arching positive note, which recognizes that the audit at Glenair had no Major and no Minor findings whatsoever. Please forward to any appropriate team members who have contributed to this successful audit.

Respectfully,
Paul Cloues, NASA Quality Engineer
NASA Launch Services Program

Glenair Factory Tour

Glenair's Complex Cable Group (CCG) has delivered creative engineering, high-quality workmanship, fast response, and on-time delivery to countless cable harness and ruggedized interconnect assembly customers customers for over 60 years—including countless space-grade and space flight applications. The operation—from cable design through fabrication, test, and delivery—is fully integrated into Glenair's Glendale campus, ISO 9001:2008 and AS9100 quality system, and high-availability business model.

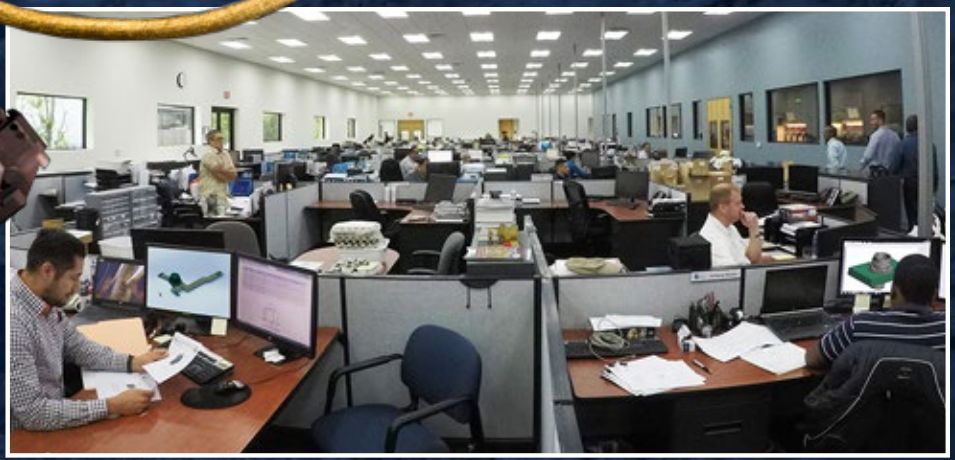
High-speed production overmolding

Multibranch assembly with lightweight ArmorLite™ microfilament EMI/RFI overbraid

Continuity testing standard on all cable circuits

Commander Ed White's "Golden Umbilical," with space-grade radiation shielding

Reliable Band-Master ATS® EMI/RFI shield termination technology used extensively throughout the shop



Glenair's engineering team in Glendale is augmented by regional teams worldwide, and we love to travel. Our place or yours? We work at our customers' convenience.

The Glenair Culture

COMMITTED TO QUALITY AND CUSTOMER SERVICE SINCE 1956

Glenair is proud of the quality and reliability we build into our broad range of mission-critical interconnect solutions—from discrete connectors to complex cable assemblies and embedded systems. Glenair is the biggest "made in the USA" interconnect supplier in the high-reliability industry, but we also operate factories in the UK, Italy, and Germany to serve the unique requirements of those markets. Glenair's Worldwide Quality System is ISO 9001 and AS9100 certified and registered. We also hold many discrete product and operations certifications for specialty, high-performance markets including space, nuclear power, and rail. In addition to world-class quality, we are laser-focused on customer service and committed to being the easiest manufacturer in our industry to do business with. Here are just some of our key customer service principles:

Lightning-fast turnarounds on quotes and special orders

Huge same-day shipment inventory

Worldwide sales and technical support in every major market

Full-spectrum, "no gap" product lines

Generous NRE, RMA, and sample request policies

Abundant engineering and technical support

No dollar or quantity minimums

No attitudinal constraints when it comes to customer convenience and service

FACTORY TOUR

SPACE-GRADE

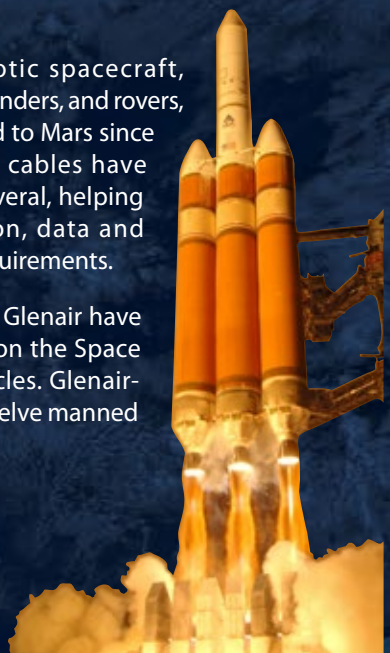
Complex Cable Assemblies

Commander Ed White on the first American spacewalk, 1965 with Glenair-manufactured "Golden Umbilical" cable

We like to begin our presentation of Glenair's proven-performance space-grade products with the golden umbilical life support cable used by Commander Ed White in the first American space walk in 1965. This was a complex cable assembly with an exacting set of performance requirements. Even though this application is now over 50 years old, it still reflects Glenair's design and fabrication expertise and that we have been a go-to supplier for the space industry for almost 5 decades. Today we continue to fabricate high-performance cables for space, from rugged Viton® overmolded designs to ultra-lightweight SpaceWire jumpers for the high-speed space data transmission protocol. Other notable space cable applications include:

- Dozens of robotic spacecraft, including orbiters, landers, and rovers, have been launched to Mars since the 1960s. Glenair cables have ridden along on several, helping to fulfill navigation, data and communication requirements.
- Complex interconnect cable assemblies made by Glenair have also traveled to and from orbit dozens of times on the Space Shuttle, as well as numerous space-launch vehicles. Glenair-made interconnect harnesses also served on all twelve manned Gemini capsules.

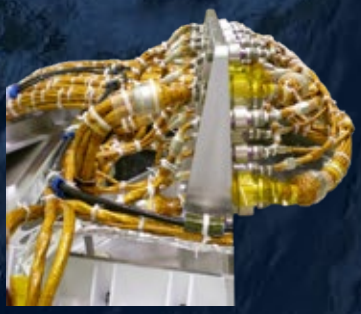


PROVEN PERFORMANCE IN SPACE

- **The "Golden Umbilical" life-support cable**
- **JPL Mars probes (orbiters, landers, and the Curiosity rover)**
- **AIRS satellite**
- **Gravity Probe mission**
- **Space Shuttle**
- **Titan II launch vehicles**
- **SpaceWire (MIL-DTL-83513)**

COMPLEX MULTIBRANCH AND OVERMOLDED CABLE ASSEMBLIES

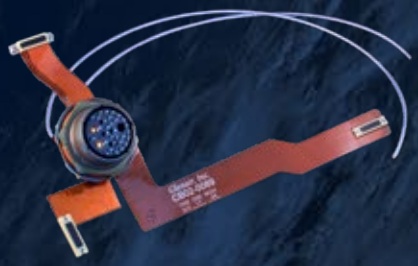
Multibranch wire harness for a space lab application



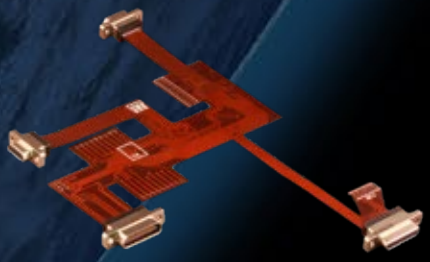
Complex Mighty Mouse cable harness for a Mars rover application

ESA and NASA screened Micro-D/Nano cable assembly

Space-grade Micro-D flex assemby with NASA EEE-INST-002 screening



Hybrid flex/rigid flex multibranch Micro-D flex assembly with discrete RF circuits



Micro-D subminiature multibranch flex assembly

TURNKEY FACTORY-TERMINATED CONDUIT ASSEMBLIES

SERIES 06 HDRM

Pyrotechnic-Free Space Mechanisms

High-reliability, non-explosive (split-spool) HDRMs, separation nuts, and pin pullers/ pushers for dependable stowage and release of deployable space systems

Glenair pyrotechnic-free release mechanisms offer quick release time, low shock, relatively low power input, and virtually no temperature sensitivity. HDRM Series includes separation nuts, pin pushers, and pin pullers—direct wired or connectorized—with a broad range of preload carrying capacity.

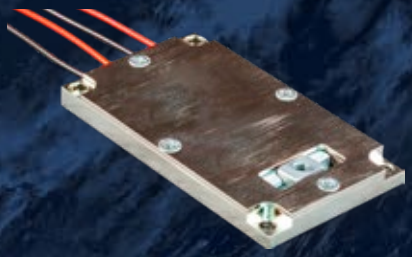
- **Pyrotechnic-free alternative (low-shock fuse-wire) for single-event release of deployable space systems—electrical initiation up to 5 amps**
- **User-serviceable and refurbishable units**
- **Redundant or non-redundant actuation circuit**
- **Not susceptible to transient and noise (EMI/ EMP/ESD/RFI) inputs**
- **Extended temperature ranges: -150°C to +150°C**

SERIES 06 HDRM

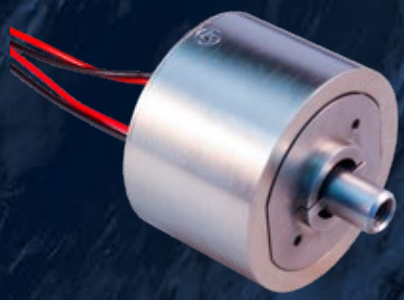
Pyrotechnic-Free Space Mechanisms

Product selection guide

HDRM DUTY CLASSES



Light-Duty HDRM
Redundant circuit,
5 – 75 lb release preload



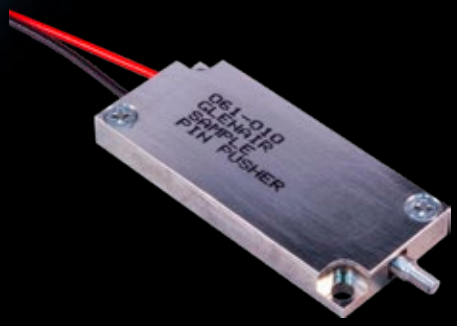
Medium-Duty HDRM
Redundant circuit,
300 – 2500 lb release preload

Heavy-Duty HDRM
Redundant circuit,
5000 – 20,000 lb release preload

HDRM RELEASE TYPES

Separation nut

Pin puller



Pin pusher

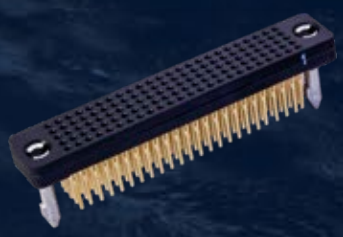
HD STACKER™

High-density, solder-free, PCIe-ready board-to-board stackable connectors

Mission-critical board-to-board connector applications demand fail-safe signal integrity as well as rugged and reliable harsh-environment performance. The HD Stacker™ brings Glenair innovation to stacking board-to-board connectors with several significant design improvements: Ultra high-density .0625" Chevron Contact System provides 55% more contacts per connector size, or a 31% size reduction for the same number of contacts as compared to current industry solutions. Polarized connector bodies and available polarized guide pins prevent accidental mismating. The solder-free press-fit compliant pin contacts are removable, repairable, and available in custom lengths. HD Stacker™ connectors may also be ordered with pre-wired cable or flex jumper terminations. High-speed signal integrity test reports are available upon request. Choose HD Stacker™ for the ultimate in high-density, rugged board-to-board stackable connector performance.

- **High-density .0625" pitch Chevron Contact System**
- **PCIe Rev 3 capable**
- **Signal integrity to 10.5Gb/sec.**
- **Polarized insulator and hardware options**
- **Solder free "eye of the needle" compliant tail for press fit installation**
- **High-temp PPS insulator meets NASA outgassing requirements**
- **Available wired / flex jumpers**
- **Available between-board spacers up to 1 inch**

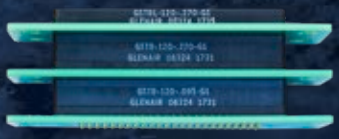
HD STACKER™ FOR MISSION-CRITICAL BOARD-TO-BOARD APPLICATIONS



Solder-free press-fit (compliant pin) board mounting

.0625" pitch contact spacing: highest available density

Polarized shells and keyed guide pin hardware prevent mis-mating



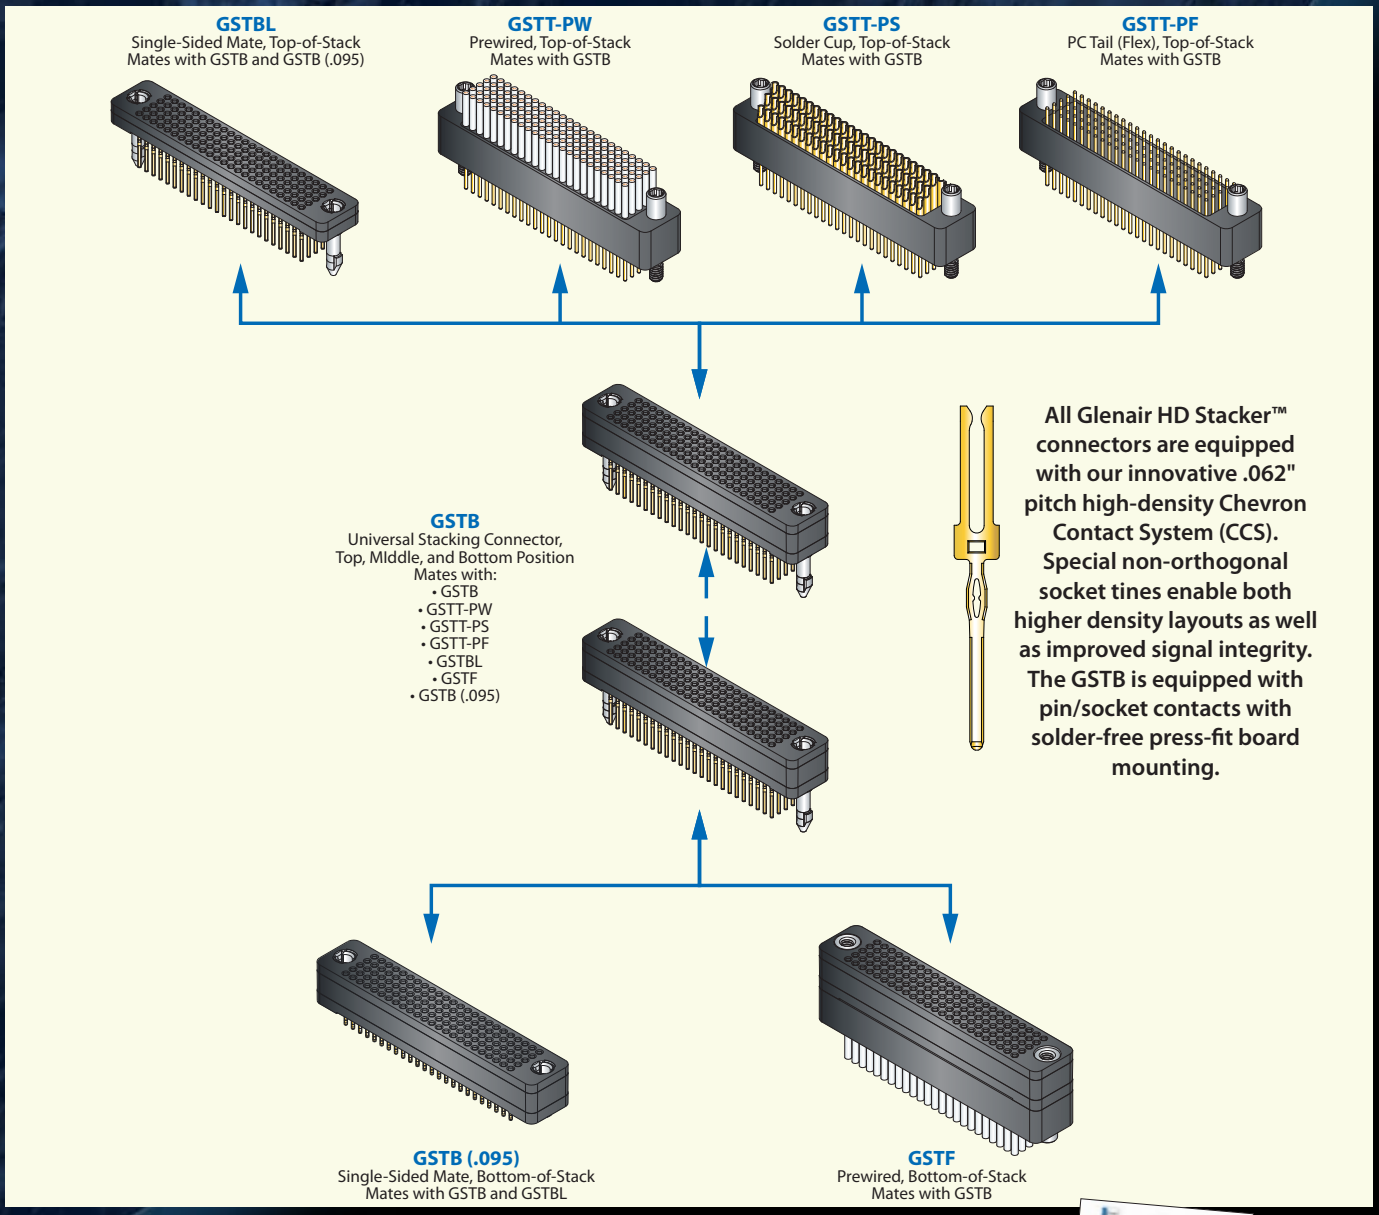
Controlled signal integrity for differential applications (PCIe Rev 3 capable)

.0625” PITCH COMPLIANT PIN

High-Density Stacker™

Rugged board-to-board stackable connectors

HD STACKER™ POSITION AND MATING COMPATIBILITY GUIDE



QUALIFICATION TESTING / HIGH-SPEED PERFORMANCE

Stacker connectors were qualified in accordance with MIL-DTL-55302G testing for:

- Contact engagement/separation
- Contact retention
- DWV
- Electrical resistance
- Mechanical vibration and shock
- Insulation resistance
- Thermal shock
- Contact resistance
- Humidity

High-frequency electrical performace tests were performed for: Insertion loss, return loss, crosstalk, and time domain performance metrics including impedance and eye pattern. Complete test reports are available at **www.Glenair.com/technical_information_test_reports**

Glenair®

SERIES 171

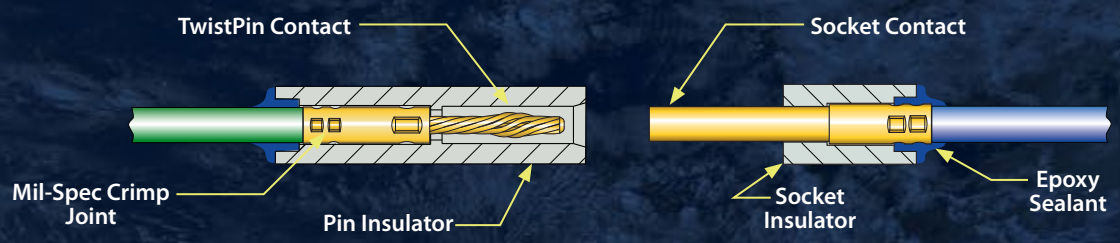
Latching MicroStrips™

TwistPin performance and durability in an economical, space-saving single row package

Series 171 MicroStrips™ are made for high-reliability wire-to-board and wire-to-wire applications. These high-density strip connectors are typically used in ruggedized 3 Amp signal applications, where higher-performance contacts, precision machined shells and space-grade dielectrics offer significant advantages compared to commercial-grade headers and jumpers. Glenair's rugged, high force TwistPin contact accepts up to #24 gage wire, the current rating is 3 Amps, the voltage rating is 600 Vac, and the temperature rating is -55C to +150C. The Series 171 Latching MicroStrip connector meets all applicable requirements of MIL-DTL-83513. Choose solder cup, pre-wired, or printed circuit board versions. A stainless steel latch provides secure coupling.

- **High-reliability TwistPin contact system**
- **#24-30 AWG wire size**
- **.050" pitch contact spacing**
- **Solder cup, pre-wired or PCB header terminations**
- **3 Amps, +150C, 600 Vac**

LATCHING MICROSTRIP™ CROSS-SECTIONAL VIEW



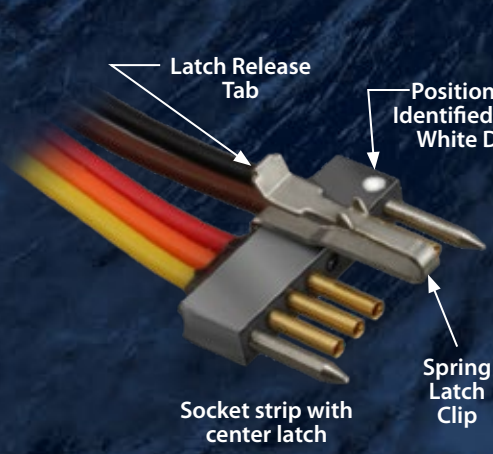
SERIES 171

Latching MicroStrips™

Superior TwistPin contact performance

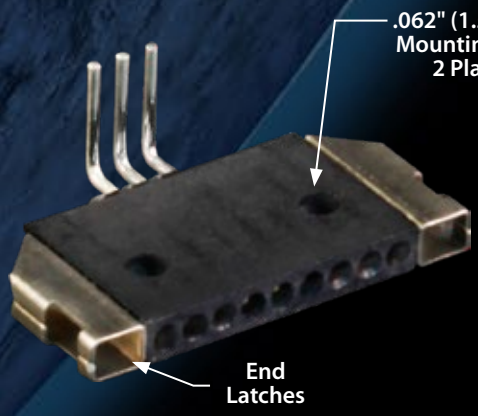
ABOUT SPRING LATCHES, GUIDE PINS AND MOUNTING HOLES

Optional stainless steel latch clips provide secure mating when subjected to shock and vibration. A single center latch is suitable for most applications. Dual end latches are also available. The spring latch is always installed on the socket strip. The latch receiver is installed on the pin strip. To unmate the connectors, simply press the release tab while pulling the connectors apart. MicroStrips™ are available with stainless steel guide pins. A single guide pin provides circuit polarization. A guide pin on each end helps to align connectors when mating and prevents damage to contacts. For most applications the preferred configuration is a single center latch with no guide pins. Mounting holes are now available. Attach strips to circuit boards with size 0-80 screws (customer-supplied).



Socket strip with center latch

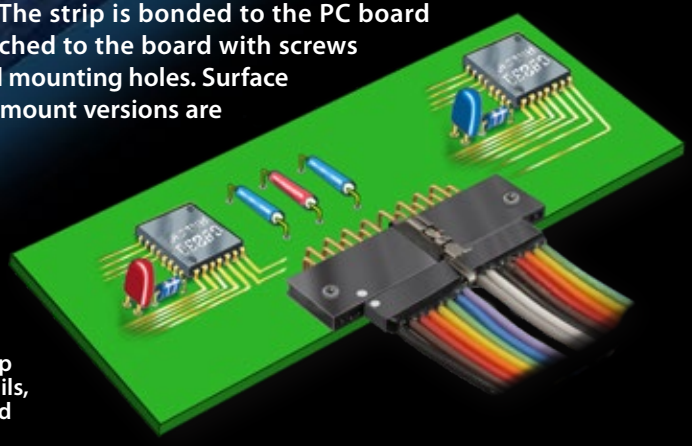
Pin strip with center latch and guide pins at both ends



Right Angle PCB Header with End Latches and Mounting Holes.

ABOUT BOARD MOUNT STRIPS

Space customers typically use MicroStrips™ for high reliability board-to-wire I/O applications. The pin strip is usually configured with right angle thru-hole PC tails. The strip is bonded to the PC board with epoxy, or attached to the board with screws installed in optional mounting holes. Surface mount and vertical mount versions are also available.



Right angle pin strip with staggered PC tails, mounting holes and center latch

SINGLE ROW BACK-TO-BACK MICROSTRIPS

.050" pitch single row surface mount back-to-back microstrip

Physical layer SpaceWire router aboard the James Webb Space Telescope (NASA)

SpaceWire Cable Assemblies

Flight- and lab-grade SpaceWire qualified cable assemblies for IEEE 1355 space network node interconnection of routers, switches, recorders, transceivers, and other physical layer devices

The success of any space mission begins with reliable data transmission and Glenair Spacewire cables, built to meet the strict standards set forth by ECSS-E-ST-50-12C make this a reality. Our Spacewire cables offer bidirectional, high speed data transmission rates up to 400 Mbits/s while significantly reducing cross talk, skew, and signal attenuation. By incorporating a serial, point-to-point cable, with low voltage differential signaling (LVDS) reduced costs are realized through an easily integrated data transmission cable. These features allow Spacewire cables to be incorporated across various satellite data transmission programs without the expense of costly design customization.

Glenair Spacewire assemblies begin with a high performance cable built with expanded polytetraflouroethylene (ePTFE) insulation. This material allows for low-loss transmission of LVDS signals, maximizing data-rates while allowing for the implementation of standard hardware protocols, thus eliminating the need for design customization and long lead time cable projects.

TYPICAL USES INCLUDE

- EGSE applications
- Radar sensor systems
- Hi-resolution camera equipment
- Sensor, mass-memory unit, and telemetry subsystem interconnections

APPROVED FOR USE BY:

- ESA
- NASA
- JAXA
- RKA

CONNECTOR/CABLE

- **Laboratory and space-grade versions available**
- **Qualified MIL-DTL-83513 Micro-D connectors**
- **Gold-plated copper alloy TwistPin contacts**
- **Basic cable, 4 twisted pair cables and a ground**
- **Epoxy resin potting**
- **EMI banding backshell**

PERFORMANCE

- **3 Amps**
- **Temperature tolerance -200° to 180° C**
- **100 Ω impedance shielded signal pair**
- **Very low skew, signal attenuation and crosstalk**
- **65dB minimum attenuation shielding effectiveness**
- **Low magnetic permeability IAW EIA-364-54**

POINT-TO-POINT AND SINGLE-ENDED

SpaceWire cable assemblies

Technical specifications / how-to-order

NOTES:

1. Flight grade (cable Type F) assemblies to be screened IAW NASA EEE-INST-002, Table 2. Level 1 with 100% thermal vacuum outgassing (24 hours/+125°C/10^{-6} torr). Reference Glenair Mod Code 429C.
2. Operating temperature - 200°C to +180°C. Reference Glenair Mod Code 428.
3. Electrical performance:
   Dielectric withstanding voltage: 600 VAC.
   Insulation resistance: 5000 megohms @500 VDC.
4. Assembly to be identified with Glenair's name, Part Number, Cage Code and Date Code or ESCC Component Part Marking Standards.

MATERIALS/FINISH:

- Shells/backshells - aluminum alloy/electroless nickel.
- Insulators - high grade rigid dielectric/N.A.
- Contacts - copper alloy, gold plated.
- Hardware - stainless steel/passivated.

RUGGEDIZED

Photonic Interconnect Solutions

Unlock the huge bandwidth of optical fiber and dramatically reduce the size and weight of transceiver hardware

Glenair leverages its extensive portfolio of military and aerospace interconnect products to bring you ruggedized Photonic solutions, converting signals between the electrical domain and the fiber domain. These Photonic products are designed for harsh military/aerospace system and subsystem environments and will operate reliably over very wide temperature ranges and high shock and vibration conditions; they have been optimized to minimize size, weight and power and offer electrical-to-fiber conversion for Ethernet, video, signal aggregation and high-speed digital signals. Glenair also offers integration of electronics or Photonics into rugged connector packages and cable assemblies per specific customer requirements. We offer rapid response in-house electrical/PCB design, and mechanical connector/backshell engineering from our vertically intergrated factory.

Signal aggregation media converter

7-port Ethernet switch

DVI video media converter

ADVANTAGES OF GLENAIR PHOTONICS

- **Reduced size, weight, and power consumption**
- **Leverages the virtues of fiber optics: EMI immunity, network security, increased transmission distance and high bandwidth**
- **High shock and vibration to support mil/aero applications**
- **Wide operating temperature range: -40°C to +85°C and beyond**
- **Designed IAW military and aviation requirements: ARINC 818, MIL-STD-883, MIL-STD-461, DO-160 and others**
- **Install Photonics in a fiber optic backbone for future requirement expandability without re-cabling**

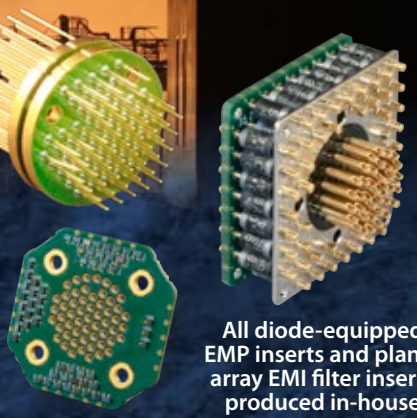
EMI/EMP Filter Connectors



All diode-equipped EMP inserts and planar array EMI filter inserts produced in-house

Glenair manufactures a full range of filter connectors for use in EMC/EMP management of electronic systems and interconnect cabling. All connectors are designed in accordance with applicable connector specifications, and are designed to mate with plugs with the same insert configuration and opposite contact gender. Planar filter arrays and TVS diodes may be integrated into both standard catalog as well as build-to-order configurations. Glenair's state-of-the-art diode burn-in process tests leaded and surface mount diodes with leakage current monitored throughout the entire test procedure ensuring field reliability.

Table I: Capacitor Array Code / Capacitance Range

Class	Pi - Circuit (pF)	C - Circuit (pF)
X	160,000 - 240,000	80,000 - 120,000
Y	80,000 - 120,000	40,000 - 60,000
Z	60,000 - 90,000	30,000 - 45,000
A	38,000 - 56,000	19,000 - 28,000
B	32,000 - 45,000	16,000 - 22,500
C	18,000 - 33,000	9,000 - 16,500
D	8,000 - 12,000	4,000 - 6,000

ADVANCED-PERFORMANCE

HiPer-D Connectors

Space-grade M24308 intermateable

The HiPer-D connector is a M24308-type D-Subminiature connector with superior design features. Unlike standard M24308 connectors with stamped steel shells, the HiPer-D connector features a one-piece machined shell, 200°C continuous operating temperature rating and enhanced, mated shell EMI/RFI protection via an integrated ground spring. Aerospace grade fluorosilicone grommets and face seals (JAXA / NASA outgassing available) provide environmental protection. The HiPer-D is intermateable, intermountable and interchangeable with standard M24308 D-Sub connectors.

- **Advanced temperature, vibration and EMC/ electrical performance**
- **11 standard and 20 combo insert arrangements**
- **High temperature epoxy insulators**
- **Watertight sealing**
- **Rugged machined one-piece shell**

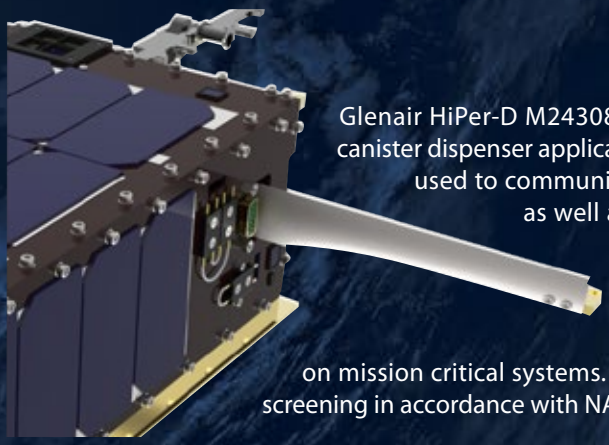
SERIES 28

HiPer-D Space Grade Connectors

Product features and specifications



Glenair HiPer-D M24308 D-sub connectors are ideally suited for CubeSat or NanoSat canister dispenser applications where rack and panel or connectorized wire assemblies are used to communicate with HDRMs, pin pullers, pin pushers, door status sensors, as well as system communications and testing prior to deployment of satellite equipment. Standardized usage of M24308 connectors on hardware interfaces simplifies interconnection and communication. Glenair HiPer-D space grade M24308 D-sub connectors eliminate potential interconnect electrical problems on mission critical systems. Connectors are supplied with NASA/ESA/JAXA outgassing and screening in accordance with NASA EEE-INST-0002.

HiPer-D High-Performance D-Sub vs. MIL-STD-24308

HIGH PERFORMANCE

Series 791

The next-generation ultraminiature rectangular connector for demanding aerospace applications

Polarized / keyed shells prevent mis-mating and allow designers to specify identical layouts side-by-side without risk of circuit damage

Sometimes the simplest ideas are the best ideas. The Series 791 is a simple idea. Let's create a brand new class of connector – the ultraminiature rectangular. Let's combine the versatility of the Series 790 Micro-D type connector with the rugged features of our popular HiPer-D M24308 type connector. Let's add a unique dual lobe shell and let's recess the pins to eliminate the possibility of scooping damage. Let's add high speed datalink capability.

Originally designed for NASA's Orion project, the 791 is qualified for manned space flight. The 791's small size and blind mate capability make it a perfect choice for 2U and 3U electronics modules. Applications include radars, weapons systems, comms gear, satellites, exoatmospheric vehicles, avionics, power distribution units, instrumentation, and everywhere else in need of a smaller, higher performance interconnect system.

- **Next-generation small form factor aerospace-grade rectangular connector**
- **Scoop-proof recessed pin contacts**
- **37 arrangements, 12 shell sizes for the ultimate in versatility**
- **Rugged aluminum alloy dual lobe shell**
- **Environmental**
- **EMI shielded**
- **Blind mating**

SERIES
791
SEVEN
NINETY-ONE

About The Series 791

The Series 791 is an aerospace-grade ultraminiature rectangular connector with EMI protection and environmental sealing. Originally developed for NASA's Orion capsule, The 791 is qualified for manned space flight and is ideal for radars, weapons systems and avionics gear.

The Series 791 is available either with crimp pins or with printed circuit terminals. Machined aluminum alloy shells feature dual lobes for polarization. Contact sizes range from size 8 to size 23 in 37 arrangements. Pin contacts are recessed to prevent scooping damage while mating. Crimp contacts conform to M39029 requirements and are rear release.

An optional ground spring reduces susceptibility to EMI problems. Fluorosilicone face seals and wire grommets prevent moisture and contamination. Panel mount versions are available with an O-ring, or for improved panel bonding, a metal spring.

Board mount versions include straight or right angle terminals. Right angle PCB connectors feature an aluminum shroud covering the terminals.

Hardware options include screwlocks, jackscrews or guide pins for blind mate applications.

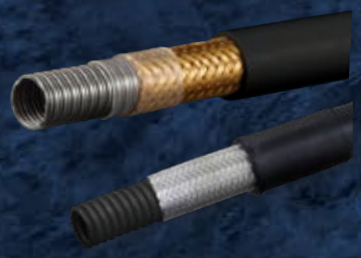
Liftoff: a Delta II Launch Vehicle

POLYMER AND METAL-CORE

Conduit Systems

The flexible, lightweight alternative to standard jacketed cables



Conduit wire protection systems for space applications must be able to withstand extreme environments—from immersion in harsh chemicals, to temperature extremes and numerous flex cycles—without breakdown or failure. Glenair conduit systems are rigorously engineered to meet the exacting specifications of NASA, ESA and JAXA space programs, and have been successfully implemented in numerous space programs—from launch vehicles to the International Space Station and the Gravity Probe mission.

Lightweight, flexible polymer-core materials are available in a wide variety of materials to suit any application: Annular material choices include: Kynar, PVDF and G-FLEX Siltem, helical choices include ETFE, FEP, PFA, PTFE, and PEEK plus AS81914 /1 – 11 qualified materials and configurations.

Metal-core versions are specified for extreme crush resistance and optimal EMI shielding. The helically-wound metal conduit provides extremely high levels of EMI protection across all radiation fields and frequencies. Stainless steel versions are often specified for environments subject to the temperature extremes of space.

- **Hermetically sealed, flexible metal-core conduit for interconnect applications**
- **Lightweight, flexible helical and annular polymer-core materials and easy to install fittings, transitions and adapters**
- **Turnkey, factory-terminated assemblies for landing gear and other rugged aerospace applications**

AmberStrand® is ultra-lightweight microfilament metal clad EMI/RFI composite braiding.
Glenair offers AmberStrand® users direct factory overbraiding services for point-to-point and multi-branch interconnect assemblies.

LIGHTWEIGHT

AmberStrand®

Composite metal-clad EMI/RFI expandable braided shielding

The smart way to reduce launch and flight weights in aerospace systems

For many applications, the cable shield is the most important element in controlling EMI. Unfortunately, metal shielding—especially when applied in multiple layers—can be extremely heavy. The opportunity to provide robust EMI shielding at a fraction of the weight is the principal advantage of composite thermoplastic EMI/RFI braid made from AmberStrand® material. Transfer impedance test reports demonstrate the effectiveness of the material compared to conventional metal solutions. So get smart! Reduce weight and save money with AmberStrand®

- **Metal-clad EMI/RFI Shielding with a lightweight composite thermoplastic base material**
- **Highly conductive surface plating**
- **Reduce shielding weight up to 80% and more**
- **Reduce operation costs by permanently reducing launch and aircraft all-up weights**
- **Superior high frequency shielding compared to tinned and/or nickel plated copper**
- **Tensile strength: 590,000 psi (min)**

ArmorLite™ is an ultra-lightweight microfilament stainless steel EMI/RFI braided shielding. Available as tubular sleeving as well as direct factory overbraiding for point-to-point and multi-branch interconnect assemblies.

LIGHTWEIGHT

ARMORLITE™

Microfilament nickel-clad expandable stainless steel EMI/RFI braided shielding

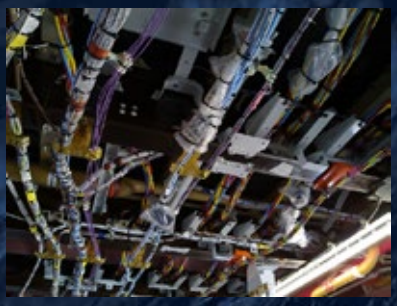
Save weight and money every time you fly! All-Up-Weight (AUW) has met its match: ArmorLite™ microfilament stainless steel braid saves pounds compared to standard QQ-B-575/A-A-59569 EMI/RFI shielding. ArmorLite™ is an expandable, flexible, high-strength, conductive stainless steel microfilament braid material designed for use as EMI/RFI shielding in high-performance wire interconnect systems. The principal benefit of ArmorLite™ is its extreme light weight compared to conventional nickel/copper shielding. By way of comparison, 100 feet of 5/8 inch ArmorLite™ is more than four pounds lighter than standard 575 A-A-59569 shielding. Plus, ArmorLite™ offers superior temperature tolerance compared to other lightweight tubular braided shielding including microfilament composite technologies.

- **Ultra-lightweight EMI/RFI braided sleeving for high-temperature applications -80°C to +260°C**
- **Microfilament stainless steel: *70% lighter* than NiCu A-A-59569/QQB575**
- **Outstanding EMI/RFI shielding and conductivity**
- **Aerospace environment qualified**
- **Superior flexibility and "windowing" resistance: 90 to 95% optical coverage**
- **70,000 psi (min.) tensile strength**
- **Best performing metallic braid during lightning tests (IAW ANSI/EIA-364-75-1997 Waveform 5B)**

LIGHTWEIGHT, FLEXIBLE

ArmorLite™ Microfilament Braid for EMI/RFI Shielding Applications

ARMORLITE™ AIRCRAFT UTILIZATION ANALYSIS COMPARED TO STANDARD A-A-59569 Ni/Cu BRAID



ArmorLite™ lightweight EMI/RFI braided shielding is ideally suited for weight reduction efforts in Electrical Wire Interconnect Systems

SuperNine®

Blind-Mate Connectors

Rack and Panel Sealed, Assisted Kick-off and Feed-Through Blind-Mate to D38999

Blind-mate, fixed and float-mount interconnects for non-ITAR commercial as well as military/defense applications

Application: Glenair Series 253 blind-mate connectors are designed for use in commercial rack-and-panel instrumentation applications, satellite deployment, scientific payloads, interstage, UAV, and munitions release, and more.

- **Available in most symmetrical MIL-STD-1560 insert arrangements with contacts sizes from #23 to #8**
- **Selected materials offer low outgassing properties and high resistance to both corrosion and stress corrosion cracking**
- **NASA outgassing bake-out process available**
- **Designed to withstand the rigors of launch and flight—including shock, vibration, thermal vacuum, acceleration, and temperature extremes**
- **Standard accessory threads and teeth per MIL-DTL-38999 accommodate a wide range of backshell accessories**
- **Crimp-removable contacts standard. PC tails, dual-flange standoffs, hermetically sealed, and custom blind-mate configurations available**

SPACE-GRADE BLIND MATE

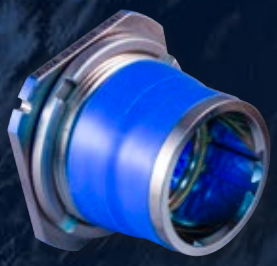
SuperNine®

Float-mount and adjustable separation force connectors

MIL-DTL-38999 Series III type, environmental, crimp contact

CRITICAL MECHANICAL FEATURES OF BLIND-MATE AND ADJUSTABLE SEPARATION FORCE (ZEF) CONNECTORS

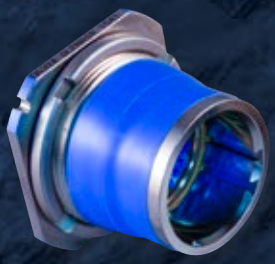
Roll-off nose: allows for the smooth disconnection of blind mate plugs and receptacles.



Float mounting: allows for coplanar movement of the receptacle during mating, preventing contact and shell damage.

Misalignment accommodation: Radial, axial, and angular misalignment during mating is accounted for with integral wave springs.

Sealing: Misalignment accommodation makes environmental sealing difficult. The problem is solved with auxiliary external seals.



EMI shielding: Glenair incorporates ground springs in receptacle connectors and grounding fingers in special coupling nut-equipped plugs to optimize 360° shell-to-shell continuity.

Assisted separation force: Adjustable kick-off style with spring-loaded posts and an adjustment ring to calibrate separation force. A second style uses **wave springs** on the shell body.

Available non-ITAR environmental blind-mate and adjustable separation force solutions		
Basic Part No.	**Description**	**Mates With**
253-014	Fixed jam-nut mount plug with roll-on/roll-off nose and Accessory threads	253-015

253-019	Floating jam-nut mount receptacle with misalignment accommodation and optional sealing	253-018
253-031	Blind-mate jam-nut mount plug with kick-off spring and accessory threads	253-032
253-032	Floating jam-nut mount receptacle with misalignment accommodation	253-031
253-033	Float mount feed-thru, jam nut mount receptacle to 38999 type Series III plug mating interface	253-019
253-025	Locking circuit and test mate connector	253-016

Launch of a Japanese H-IIA rocket with the Global Precipitation Measurement (GPM) Core Observatory onboard, from the Tanegashima Space Center

SPACE-RATED

Lanyard-Release Quick-Disconnect Connectors

For mission-critical disengagement and release of launch and payload systems

AS81703 space-grade lanyard release push pull mated pair with special order band and boot platform

- **Jam-free, push on/pull off technology**
- **Reliable fail-safe axial pull lanyard equipped coupling**
- **Instant disengagement for critical quick-release systems**
- **Manufactured IAW MIL-STD-1760**
- **Special umbilical buffers and go-betweens also available**
- **Blind-mate rack-and-panel versions available**
- **Qualified for military and space application**
- **Outgas processing IAW NASA, ESA and JAXA**

Mil-standard 1760 lanyard-release connectors were originally developed for carriage stores management applications including weapons, pods, and drop tanks. Incorporating a common electrical interface as well as interfacing signals and pin and circuit assignments, lanyard-release connectors of this type are broadly employed for reliable, jam-free mating and disengagement. Space-rated versions of 1760 class cylindrical connectors take advantage of the technology's legacy in harsh-duty aircraft applications to ensure reliable and predictable performance in space. From fail-safe application in space station and space telescope deployment to rack-and-panel research equipment interconnection, these rugged axial-pull lanyard connectors deliver proven performance in accordance with all applicable NASA, ESA, and JAXA standards. Available in a wide range of connector packaging, from MIL-DTL-38999 SuperNine® to AS81703* and special small form-factor designs, these proven-performance interconnection devices may be equipped with standard signal or power contacts as well as shielded high-speed coax, twinax, and quadrax.

Best-of-Class Hermetic Connector Design Capabilities

Resolve gas, moisture and particle ingress problems with advanced-performance glass- and encapsulant-sealed hermetic connectors

- Superior pressure resistance to 32,000+ PSI
- Higher resistance to extreme operating temperatures to 260°+ C
- Superior mechanical strength
- No material breakdown or aging over time
- Helium leak rate <1X10^{-7} cc/sec to 1X10^{-10}

CODE RED

LIGHTWEIGHT HERMETIC SEALING

Lightweight hermetic encapsulant sealing solution with 1X10-7 leak rate performance. Available today in Mighty Mouse 806 Mil-Aero, M24308/9 D-Sub and D38999/23

Aluminum shell CODE RED hermetic connectors and copper contacts reduce weight and improve electrical performance compared to heavier-duty glass-to-metal seal hermetic solutions

LIGHTWEIGHT, LOW RESISTANCE

CODE RED

"Mission-Critical" hermetic sealing with better than 1X10^{-7} leak-rate performance

Hermetically-sealed interconnects used in vacuum or high-altitude applications prevent moisture and other contaminants from damaging sensitive electronic equipment. Glass-to-metal hermetic sealing has been the gold standard in the aerospace and petrochemical industries for decades due to the strength and long-term durability of the materials used. But glass-to-metal seal hermetics come with a big price tag in both weight and electrical resistance.

CODE RED is an innovative sealing encapsulant and application process—invented by Glenair—that provides durable hermetic sealing in a lightweight aluminum package. CODE RED allows for the use of conventional gold-plated copper alloy contacts, significantly improving electrical performance. CODE RED hermetic connectors are available now in Glenair SuperNine® (D38999 Series III type metal and composite), Series 80 Mighty Mouse, and M24308 D-Sub; and deliver reliable, life-of-system 1X10^{-7} max leak-rate hermetic sealing. Special non-magnetic (zero residual magnetism) versions are also available, consult factory.

- **Full hermetic sealing, better than 1X10^{-7} in a lightweight aluminum shell with low electrical resistance gold-plated copper contacts**
- **Meets NASA outgassing requirements, as well as aerospace temperature and corrosion resistance standards**
- **Operating temperature -65°C to +200°C**
- **Available today in Mighty Mouse 806 Mil-Aero, M24308/9 D-Sub and D38999/23 glass-to-metal seal hermetics**
- **Significant weight savings—up to +50%**
- **Order-of-magnitude improvement in current carrying capacity and electrical resistance compared to Kovar/ Inconel solutions**

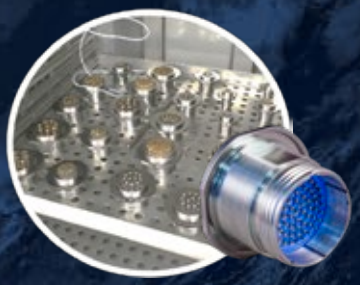
CODE RED LIGHTWEIGHT HERMETIC CONNECTOR TESTING AND VALIDATION



Connectors utilizing CODE RED hermetic encapsulant sealing went through a grueling qualification test and validation process to prove material durability and hermeticity. Validation testing including 100 cycles of thermal shock IAW EIA-364-32 Test Condition A -65°C to +200°C while maintaining hermeticity followed by 1000 hours of thermal aging at 200°C. Additional tests included:

- DWV, DWV at altitude
- IR, IR at temperature
- Highly Accelerated Life Testing (HALT)
- Insert and contact retention
- Mating durability
- Random vibration at temperature IAW MIL-DTL-38999
- Hermetic seal at 30 psi

The entire qualification test cycle was repeated successfully a second time with new parts to validate complete reliability.

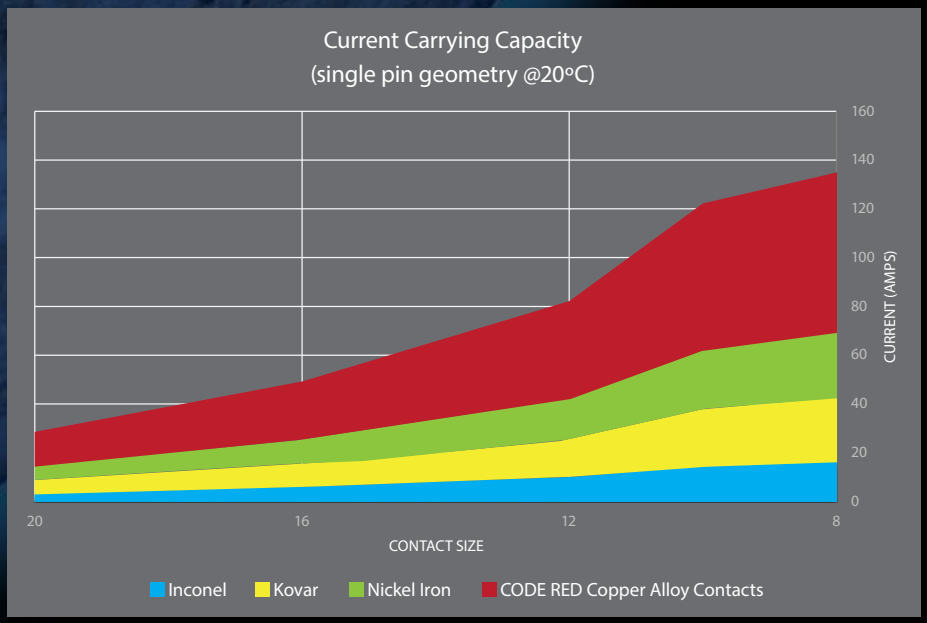
CODE RED USES PROVEN-PERFORMANCE CONNECTOR AND CONTACT MATERIALS

CODE RED Materials / Finish	
Sealing Adhesive	Proprietary Glenair compound
Contacts*	Gold-plated beryllium copper alloy per ASTM B 197 or equivalent
Insulator	Rigid plastic
Seals	Blended fluorosilicone/ silicone elastomer
Receptacle Shell and Jam Nut*	Aluminum alloy 6061-T6 per ASTM B 221
Finish*	Electroless nickel per ASTM B 733

*zero residual magnetism materials also available

Percentage Weight Savings CODE RED vs. Glass-to-Metal MIL-DTL-38999 Sr. III	
Shell Size/Insert Arr.	Weight Reduction
9-35	52%
11-98	47%
13-35	47%
15-97	42%
19-32	40%
21-11	32%
23-21	28%
25-08	43%

Graph illustrates Current Carrying Capacity of CODE RED copper alloy contacts compared to the Inconel, Kovar, and nickel iron contacts used in conventional glass-to-metal seal hermetics.



APPLICATION NOTES: CODE RED is a viable drop-in solution for conventional glass-to-metal seal hermetic connectors with the following exceptions:

1. Fuel Cells: Although CODE RED exhibits outstanding resistance to caustic chemicals and fuels, its use in fuel tanks/fuel cell applications is not recommended.

2. Cryogenics: CODE RED has been tested and qualified to -65°C IAW MIL-DTL-38999

3. Sustained High-Operating Temperatures: CODE RED has been tested and qualified to +200°C IAW MIL-DTL-38999

4. High Radiation: Exposure to no more than 6 Megarads of radiation

5. Deep Subsea: CODE RED is ideally suited for aerospace and downhole applications that do not exceed 3 BAR (50 psi) atmospheric pressure differential.

6. Space Life Support Systems: Requires additional qualification testing not yet performed by Glenair.

Dimensions in Inches (millimeters) are subject to change without notice.

CIRCULAR AND RECTANGULAR

Backshells and Connector Accessories

Corrosion resistance, weight reduction, environmental durability and design innovation

Nowhere in the world does anyone manufacture and supply such a complete selection of backshell connector accessories—for space as well as all other mission-critical applications. In addition to traditional metal materials, Glenair also manufactures an extensive line of lightweight, corrosion-free composite thermoplastic interconnect components ideally suited for systems requiring electromagnetic compatibility, long-term durability and weight reduction.

The Glenair Qwik-Clamp connector accessory shown here is used on the International Space Station. This gold plated part is extremely resistant to space corrosion and radiation and is designed with all smooth surfaces to eliminate potential damage to space suits.

- **High-performance connector accessories for every environmental, mechanical and electromagnetic shielding requirements**
- **Qualified to AS85049, SSQ 21635, 21636, 22698 and 22681 and other standards and specs**
- **EMI shield termination, cable strain relief, connector protective covers and more**
- **Lightweight composite versions**
- **QPL AS85049 backshells**
- **Tens of thousands of popular part numbers in inventory ready for same-day shipment**

Reference Applications

Brief history of Glenair space-grade design-ins

Atmospheric Infrared Sounder (AIRS)

Glenair-built cables provide signal and power interconnection on a broad range of space applications including The **Atmospheric Infrared Sounder (AIRS)** instrument aboard the Aqua Earth-observing satellite, JPL Mars Probes, the Space Shuttle, and the AIRS satellite. Several notable space applications include:

The **Gravity Probe**, confirmed two key predictions of Einstein's general theory of relativity in 2011 by monitoring the orientations of ultra-sensitive gyroscopes relative to a distant guide star. Glenair-built cables are on board.

Gravity Probe

Titan II space-launch vehicles, with Glenair-made interconnect harnesses, propelled all twelve manned Gemini capsules.

Hermetic connectors are ideal for high-pressure/low-leakage applications in air, sea and space environments. Made of stainless steel (CRES) with glass insulators fused to the connector shell, and suitable contacts meeting a leak rate of 1 X 10^{-6} cubic centimeters of Helium per second, these mounted receptacle connectors and bulkhead feed thrus prevent gases from travelling through apertures or penetrations created for the routing of interconnect cabling. Glenair hermetics have protected a range of space programs including:

The **X-38** program implemented to design and build a spacecraft capable of flying itself and the Space Station crew back to Earth in an orbital emergency.

The X-38

Pegasus rockets, the winged space booster vehicles used in an expendable launch system developed by private industry.

MetOp-A, Europe's polar-orbiting satellite dedicated to operational meteorology.

A well designed interconnect system will include a complement of grounding and shielding technologies to insure EMC. ***EMI filter connectors*** are an effective method to achieve electro-magnetic compatibility. Glenair is extremely well versed in supplying filter connector products optimized for use in space-grade applications, providing products compliant to EEE-INST-002, Table 2G, the recognized standard for space grade filters. Glenair MIL-DTL-38999, Series 80 Mighty Mouse, Series 28 HiPer-D, and Series 79 Micro-Crimp filter connectors are currently qualified and used by Ball Aerospace, Boeing Space, NASA/JPL, Orbital Sciences, Sierra Nevada Corp., and others. Notable Glenair Filtered connector space applications include:

MetOp-A

Skynet, for the United Kingdom Ministry of Defence, to provide strategic communication services to the three branches of the British Armed Forces and to NATO forces engaged on coalition tasks.

JWST

The **James Webb Space Telescope (JWST)** is a large, infrared-optimized space telescope. JWST is designed to find the first galaxies that formed in the early Universe, connecting the Big Bang to our own Milky Way Galaxy.

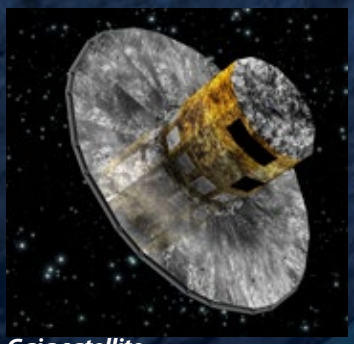
Micro-D connectors, including environmentals, hermetics, filters, and flex assemblies are commonly used in space applications for their high-performance and small size. The precision-machined shell of the Micro-D, with its robust mating retention forces, makes for an ideal connector for rocket and space vehicle applications that are subject to high levels of vibration and shock. The Micro-D is easily customized with package and mounting modification to fit virtually any integration challenge. A short list of Glenair Micro-D space applications would include the James Webb Space Telescope, SkyNet 5 military satellite, ALMA space telescope, JPL Mars Probe, Mars Curiosity Rover, AIRS satellite, and others. Several notable space applications that use Glenair Micro-D connectors include:

Skynet

The **Herschel Space Observatory**, from the European Space Agency, made several scientific discoveries in its operational phase from 2009 – 2013, including a previously unknown and unexpected step in the star formation process, and the presence of molecular oxygen in space.

Herschel Space Observatory

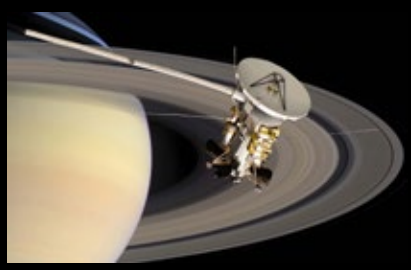
The European Space Agency also developed and built the **Gaia** satellite. Launched in 2013, its mission is to construct the largest and most precise map to date of the Milky Way. Its 2016 data release included positions and magnitudes for 1.1 billion stars



Gaia satellite

Cassini–Huygens was a joint NASA/ESA/ASI robotic spacecraft mission studying Saturn and its moons. Cassini executed several risky passes through Saturn's inner rings before completing its mission by burning up in atmospheric entry—but the data it returned will be analyzed for years to come.

CrIS is an advanced atmospheric sounding instrument aboard the United States Suomi National Polar Partnership (NPP) Polar-orbiting Operational Environmental Satellite. It produces high-resolution pressure, temperature, and moisture profiles from space, enabling more accurate predictions of severe weather events.



Cassini-Huygens

Glenair M32139 Class S Nanominiature connectors are DSCC approved for space programs. Glenair Nanominiature connectors, cable assemblies and flex circuit assemblies are currently in use on the several space-based telescopes,

CrIS NPOESS Satellite

including the **Large Synoptic Survey Telescope (LSST)**, **James Webb Space Telescope**, and others.

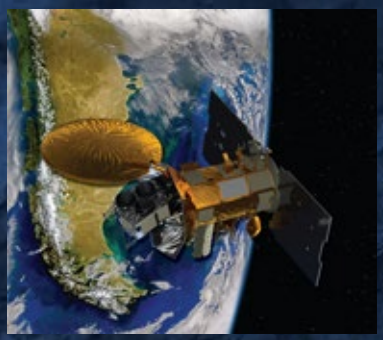
The ***Series 79*** connector is a Glenair original design. It features crimp, rear-release size #23 contacts on 0.075" spacing, as well as size #12 and #16 power and coaxial crimp contacts available in 29 insert arrangements for data and power transmission. The Series 79 Micro-Crimp is ideally suited for blind-mate rack and panel and/or module-to-chassis applications; and is currently qualified for use by Orion, Ball Aerospace, Honeywell Space, and LMCO Denver.

Glenair ***Series 80 Mighty Mouse*** connector and cable assemblies were developed as a smaller and lighter alternative to MIL-DTL-38999, offering virtually equal performance with up to 71% (weight) and 52% (size) savings for similar contact layouts. Mighty Mouse is well established in hundreds of safety-critical military, medical, industrial and geo-physical and space applications. Some space applications for this reduced form factor connector include:

NASA's **Mars Exploration Rover (MER)** Mission, an ongoing robotic mission to explore the Martian surface and geology. The Opportunity rover is continuing her winter exploration of "Perseverance Valley" on the west rim of Endeavour Crater.

Mars Curiosity Rover's latest selfie, January 2019

The Mars Science Laboratory **Curiosity** landed in Mars' Gale Crater in 2012. This rover is over five times as heavy and carries over ten times the weight in scientific instruments as previous rovers. Within weeks, Curiosity discovered an ancient steambed where water once flowed, and evidence of a lake that could have supported microbial life in the distant past. Curiosity's original 2-year mission has been extended indefinitely, and it's still returning valuable data more than 5 years after landing.

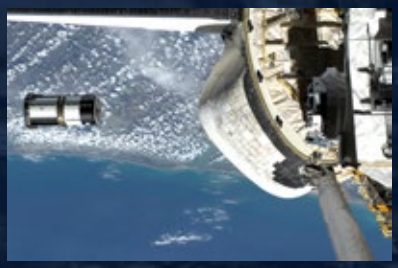


Aquarius Satellite

Aquarius was a satellite mission to measure global Sea Surface Salinity. It provided the global view of salinity variability needed for climate studies.

Glenair ***Sav-Con® Connector Savers*** protect deliverable connectors subject to repeated mating and unmating cycles, especially from repetitive qualification test cycles. Sav-Con® Connector Savers prevent costly repair or replacement of cable plugs and receptacle connectors by absorbing connect and disconnect abuse and by reducing mating cycles during testing to the absolute minimum.

A virtual "Who's Who" of space programs use Glenair Sav-Cons including Boeing Satellite Systems, the Delta IV launch vehicle, Voyager, Galileo, Magellan, Cassini, and others—both during fabrication testing and in operation.



A NASA LEO (Low Earth Orbit) Satellite

One of the most dramatic applications of our Sav-Con connectors is on the **Space Shuttle Orbiter** where they provided protection for the umbilical connectors from liftoff to touchdown on every mission.

For many space applications, the cable shield is the most important element in controlling EMI and radiation damage. Unfortunately, metal shielding—especially when applied in multiple layers—can be extremely heavy. ***AmberStrand*** composite thermoplastic braid, and ***ArmorLite*** microfilament stainless steel braid provide robust EMI shielding at a fraction of the weight of

conventional shielding. Glenair lightweight braid technologies are currently qualified for use by EADS Astrium, Honeywell Space, Orbital Sciences, and Ball Aerospace. These unique products notably served on:

The **Cassini-Huygens** Program, an international science mission to the Saturnian system.

Mars Pathfinder, which delivered an instrumented lander and a free-ranging robotic rover to the surface of the red planet.

Ariane 5

The Glenair ***Qwik-Clamp backshell*** is used on the **International Space Station**. This gold plated part is extremely resistant to space corrosion and radiation and is designed with all smooth surfaces to eliminate potential damage to space suits.

Other circular backshell and connector accessory space applications include:

The European Space Agency's **Ariane 5**, which launches satellites and other craft into geostationary transfer orbit (GTO), medium and low Earth orbits, Sun-synchronous orbits (SSO) and Earth-escape trajectories

SEA Launch was a spacecraft launch service using a mobile sea platform for equatorial launches of commercial payloads.

As with circular backshells and accessories, Glenair has the rectangular interconnect world well covered. We supply everything from miniaturized backshells for Micro-D connectors to larger rack-and-panel connector accessories. Glenair rectangular accessories are used on dozens of space programs including the International Space Station, MetOps, Herschel Space Observatory, James Webb telescope, and others.

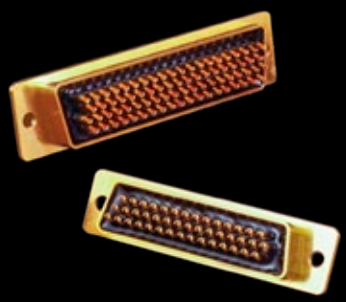
Space-grade Qwik-Clamp backshell designed for the International Space Station

Recent / Notable Space-Grade Application Wins for Glenair

Glenair is the exclusive interconnect connector and cable supplier to the Sierra Nevada Dream Chaser reusable crewed suborbital and orbital space plane. The Dream Chaser electrical wire interconnect system incorporates Glenair Micro-D subminiature connectors, EMI filter connectors, flex circuitry, lightweight microfilament braid, metal and composite backshells, and other technologies.

The Glenair Series 28 HiPer-D High-Performance MIL-24308 Intermateable

Glenair's qualified MIL-DTL-24308 Class K space-grade hermetic, and our recently-introduced Series 28 HiPer-D connector series have become the go-to standard for mission-critical space applications and are now qualified for use by Ball Aerospace, LMCO Denver, Orbital Sciences, and others.



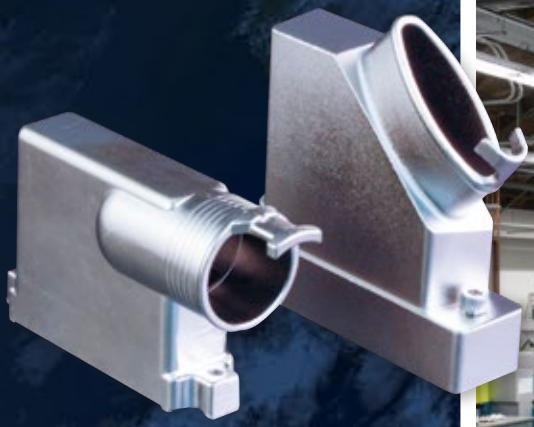
Gold-plated space-grade Series 28 HiPer-D connectors

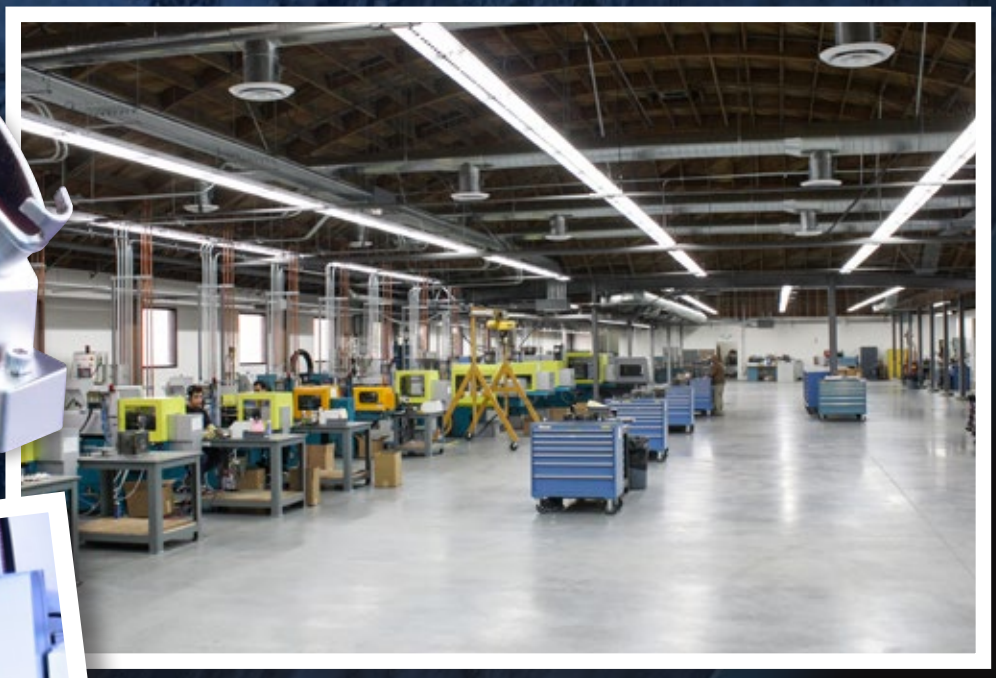
Glenair Factory Tour

GLENDALE, CALIFORNIA

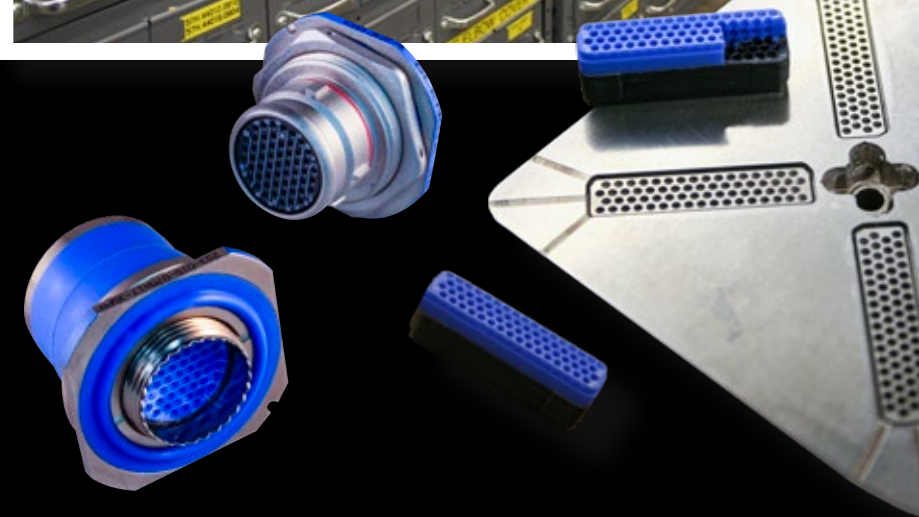
Complete vertical integration of manufacturing resources—at home in Southern California since 1956

Glenair operates the largest precision machining facility in the high-performance interconnect industry, allowing us to support both small and large-volume interconnect requirements—from one piece to 100,000





Glenair's massive investment in composite thermoplastic injection molding capabilities—the largest in the high-reliability interconnect industry—includes machinery, tooling, and most importantly, professional operators



Glenair Factory Tour

Glenair's Complex Cable Group (CCG) has delivered creative engineering, high-quality workmanship, fast response, and on-time delivery to countless cable harness and ruggedized interconnect assembly customers for over 60 years—including countless space-grade and space flight applications. The operation—from cable design through fabrication, test, and delivery—is fully integrated into Glenair's Glendale campus, ISO 9001 and AS9100 quality system, and high-availability business model.

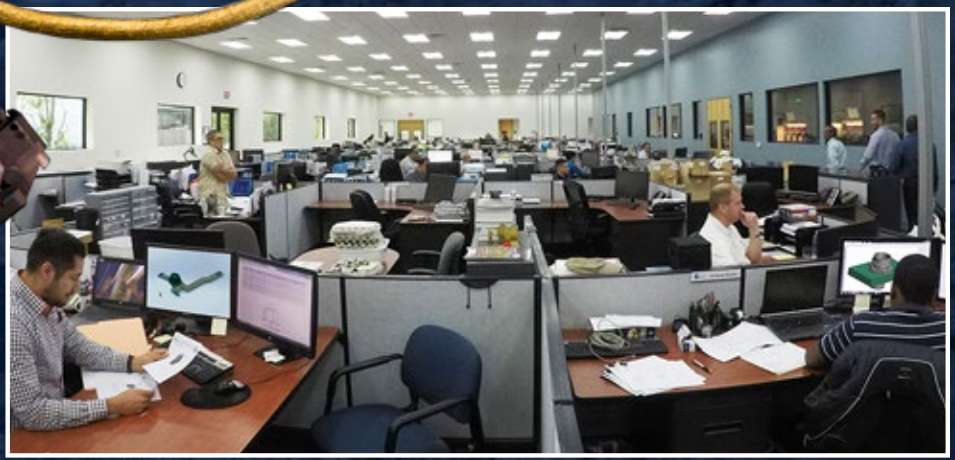
High-speed production overmolding

Multibranch assembly with lightweight ArmorLite™ microfilament EMI/RFI overbraid

Continuity testing standard on all cable circuits

Commander Ed White's "Golden Umbilical," with space-grade radiation shielding

Reliable Band-Master ATS® EMI/RFI shield termination technology used extensively throughout the shop



Glenair's engineering team in Glendale is augmented by regional teams worldwide, and we love to travel. Our place or yours? We work at our customers' convenience.

The Glenair Culture

COMMITTED TO QUALITY AND CUSTOMER SERVICE SINCE 1956

Glenair is proud of the quality and reliability we build into our broad range of mission-critical interconnect solutions—from discrete connectors to complex cable assemblies and embedded systems. Glenair is the biggest "made in the USA" interconnect supplier in the high-reliability industry, but we also operate factories in the UK, Italy, and Germany to serve the unique requirements of those markets. Glenair's Worldwide Quality System is ISO 9001 and AS9100 certified and registered. We also hold many discrete product and operations certifications for specialty, high-performance markets including space, nuclear power, and rail. In addition to world-class quality, we are laser-focused on customer service and committed to being the easiest manufacturer in our industry to do business with. Here are just some of our key customer service principles:

Lightning-fast turnarounds on quotes and special orders

Huge same-day shipment inventory

Worldwide sales and technical support in every major market

Full-spectrum, "no gap" product lines

LIBERAL NRE POLICY

Generous NRE, RMA, and sample request policies

Abundant engineering and technical support

No attitudinal constraints when it comes to customer convenience and service

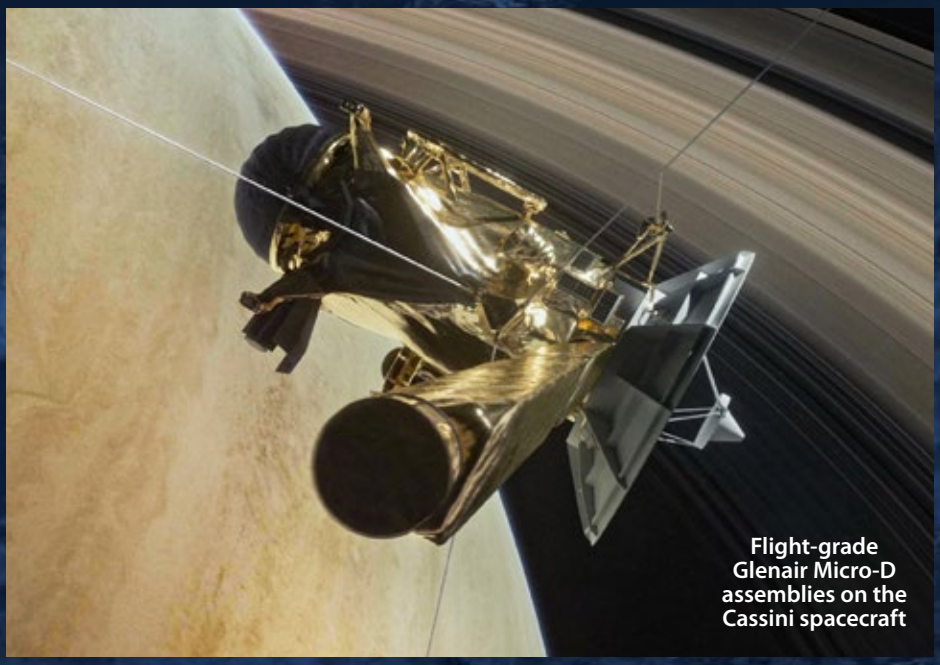
NO MINS. No Dollar or Quantity Minimum Orders

No dollar or quantity minimums

Glenair UK Factory Tour

MANSFIELD, ENGLAND

Mission-critical interconnect technologies for the UK and European markets with a special focus on micro and nanominiature flex assemblies



Flight-grade Glenair Micro-D assemblies on the Cassini spacecraft

ESCC series Micro connectors for ESA space and other UK and EU markets

Glenair UK is Glenair's Centre of Excellence for the design, build and qualification of its extensive Micro-D and Nano connector product portfolio for the European and global space market. Glenair UK have more than 30 years of experience in the manufacture of MIL-DTL-83513 Micro-D and MIL-DTL-32139 Nano compliant connectors.

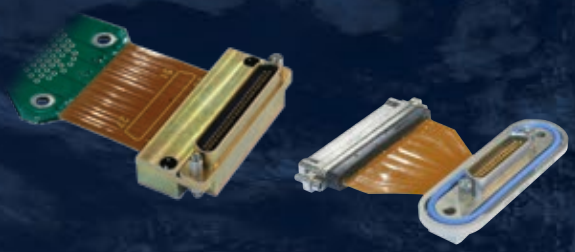
From standard flying-lead and PCB mount connectors to complex screened cable assemblies, Glenair production staff are trained and qualified to the exacting standards of IPC WHMA-A-620 and ESA soldering and crimping process standards: ECSS-Q-ST-70-08 & ECSS-Q-ST-70-26.

Certified to ISO/IEC 17025, Glenair's in-house independent test laboratory is capable of running all industry standard qualification programs for its space flight customers—from outgassing to full qualification programs (ESA and NASA).

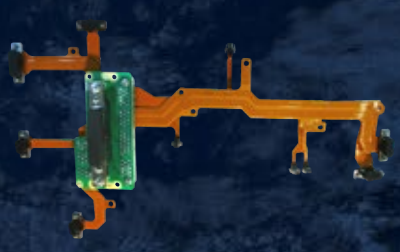
GLENAIR UK QUALITY STANDARDS AND APPROVALS

- ISO Class 8 Clean Room IAW FED STD 209E class 100,000
- Quality Management System certified according to AS9100 and ISO 9001
- Independent Test Laboratory Certified to ISO/IEC 17025 IECQ 01 and IECQ 03-6

MICRO AND NANOMINIATURE HARNESS AND FLEX ASSEMBLIES



Terminated and tested flexi and rigid flexi point-to-point assemblies with Glenair Micro and Nano interconnects



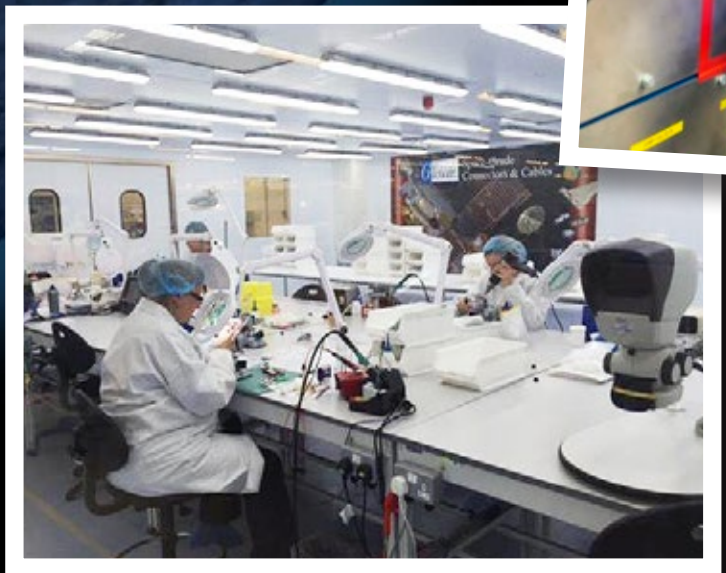
Complex multibranch flexi and rigid flexi assembly with Glenair Micro and Nano interconnects

Micro and Nano wired harnesses and pigtails

The Glenair Mansfield machine shop houses a full complement of CNC milling, turning, measurement, and mechanical inspection equipment

Micro-D and Nanominiature harnessing is completed in our AS9100 / ISO 9001 certified facility

The Glenair Mansfield clean room assembly area is used for fabrication of laser, space, and satellite assemblies IAW ISO Class 8 -100,000 PPM



Glenair UK operates an independently accredited BS9000:CECC:IECQ test lab for both internal as well as third-party product development / design verification and connector qualification

Glenair Factory Tour

BOLOGNA, ITALY

Glenair Italia serves harsh-environment military, nuclear, rail, and industrial markets with power, high-speed Ethernet, hazardous-zone interconnects and more.

SUPER ITS™ HIGH-PERFORMANCE REVERSE BAYONET

Space-grade interconnect harnesses and ESGE test rack systems for satellite applications—ESA certified

Glenair®
SPACE SYSTEMS

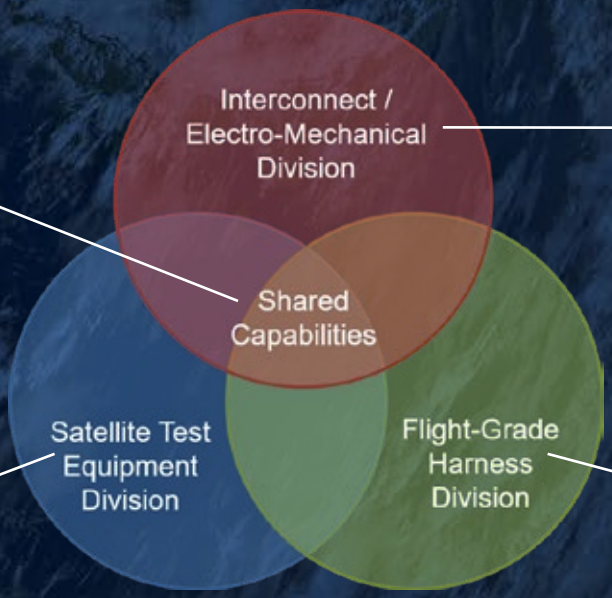
Glenair Space Systems: a mission-critical space-grade harness, test, production, and integration operation. ESA-certified assembly staff plus value-added Engineering Base and 3D SolidWorks design, prototyping, and clean-room facilities.

THE POWER OF GSS VALUE-ADDED ENGINEERING AND MANUFACTURING

A turnkey design and fabrication operation: from documentation (1), to prototype (2), to production (3), to integration (4).

GLENAIR SPACE SYSTEMS CORE CAPABILITIES AND TECHNICAL TEAMS

Customer-focused value-added engineering, integration and project management services leveraging CAD and Engineering Base



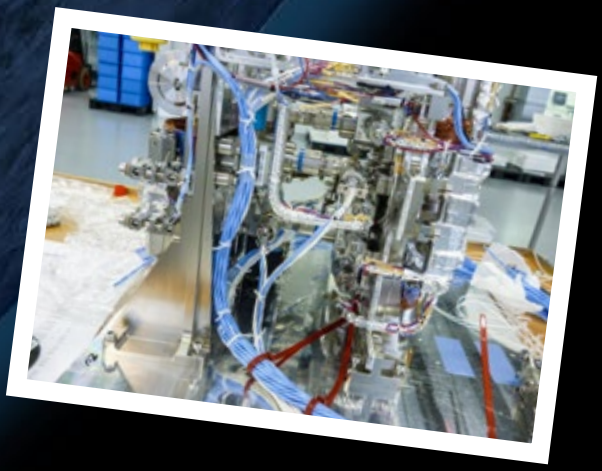
Interconnect / Electro-Mechanical Division fabricating space-grade interconnect technologies including HDRM (release nut) mechanisms

Satellite Test Division delivering turnkey Electronic Ground Support Equipment (EGSE) racks, harnesses, programming, protocols, and integration

Flight-Grade Harness division with turnkey Electrical Interface Control Document (EICD) generation, prototyping, and manufacturing

GLENAIR SPACE SYSTEMS IN-HOUSE PRODUCTION AND ASSEMBLY CAPABILITIES

Glenair Space Systems is a growing operation with an over 600 m^2 production floor. The facility also features 300 m^2 ISO 8 and ISO 6 clean rooms, ISO 5 flow chamber (certified to ESD Standard 61340-5-1), a large precision machining center, and ample clean room accommodation for large mock-up and integration projects.



Integration of production harnesses—in-house or at customer facility

ESA-certified engineering and production staff

3D mockup design, fabrication, and harness integration including in-house generation of all engineering and production files using Engineering Base

Turnkey satellite test harnesses and Electronic Ground Support Equipment racks

AUGUST 2017

Glenair®

Commander Ed White on the first American spacewalk, 1965

SPACE PROVEN

Interconnect Technologies

We like to begin every discussion of Glenair's proven-performance space-grade products with the golden umbilical life support cable used by Commander Ed White in the first American space walk in 1965. This was a complex cable assembly with an exacting set of performance requirements. Even though this application is now over 50 years old, it still reflects Glenair's design and fabrication expertise and that we have been a go-to supplier for the space industry for over 5 decades.

Today we continue to manufacture a broad range of high-performance cables and components for space—from our innovative line of non-pyrotechnic HDRMs to high-reliability assisted separation force connectors. Glenair's proven space flight heritage includes interconnect and electromechanical technology on dozens of robotic spacecraft, including orbiters, landers, and rovers.

Many customers of discrete HDRM technology look to Glenair for the turnkey supply of interconnect wire and cabling. Non-pyrotechnic separation nuts utilize EMI shielded harness assemblies to supply primary and redundant initiation energy to the split spool actuator, and to transmit telemetry data from release sensors. Glenair operates the largest and best equipped wire harness assembly shop in the mission-critical interconnect industry and has supplied countless turnkey space-grade cable assemblies of this type.

PROVEN PERFORMANCE IN SPACE

- The "Golden Umbilical" life-support cable
- JPL Mars probes (orbiters, landers, and the Curiosity rover)
- AIRS satellite
- Gravity Probe mission
- Titan II launch vehicles
- EADS Astrium
- ESA Ariane 5
- Countless others

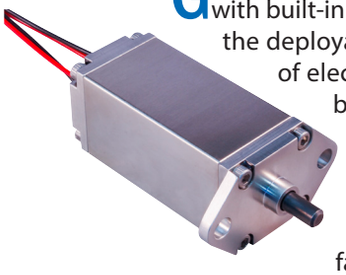
SERIES 06

Pyrotechnic-Free Space Mechanisms

High-reliability, non-explosive (split-spool) separation nuts and electromechanical release mechanisms for dependable stowage and release of deployable space systems



Glenair space mechanisms are optimized for foolproof release reliability with built-in mechanical and electrical redundancy. The planned release of the deployable satellite/payload is activated by a pre-determined value of electrical current to a fuse-wire system which causes the wire to break under tension and allows a pre-loaded mechanical bolt to actuate. Glenair's line of low-shock, redundant and non-redundant space mechanims includes both HDRM devices as well as a family of pin pushers and pin pullers. Customer-defined housing and mounting configurations are available. Consult factory for specific device TR level and qualification test reports.

Glenair pyrotechnic-free release mechanisms offer quick release time, low shock, relatively low power input, and virtually no temperature sensitivity. Glenair family of Space Mechanisms include separation nuts, HDRMs, pin pushers, and pin pullers which deliver a higher preload carrying capacity in comparison to similar devices.

- **Pyrotechnic-free alternative for single-event release of deployable space systems**
- **User-serviceable and refurbishable units**
- **Standard catalog as well as custom designs**
- **Not susceptible to transient and noise (EMI/EMP/ESD/RFI) inputs**
- **Extended temperature ranges: -150°C to +150°C**

Non-Explosive Space Mechanisms

HDRM, pin puller, and pin pusher selection guide

Pyrotechnic-Free Space Mechanisms

Technology overview

A

Glenair non-pyrotechnic space mechanism technology is based on a fusable wire-actuated separation nut design. Increasingly popular for its reliability and non-pyrotechnic action, fusable wire-actuated nut technology has the added benefit of being partially reusable and refurbishable post-deployment. Glenair HDRMs, pin pullers and pushers are immune to all forms of EMI or ESD, and capable of easily sustaining launch loads as well as defined preloads—with release deployment times comparable to conventional explosive actuators, but with low-shock and low power input.

A broad range of hold down release mechanism technologies have been historically used to hold secure and subsequently deploy satellites and other appendages (solar arrays, antenna reflectors, radiators, instruments, doors, sensors, booms, and so on) in space. Most of these technologies relied on non-reusable (explosive/pyrotechnic) designs that suffered from a broad range of deficiencies, including susceptibility to electromagnetic interference, problematic synchronization of release with mission requirements, high-shock release action, and significantly, the inability to reuse or refurbish the device during test. Historically, actuators and release devices of this type have included explosive release nuts, bolt cutters, separation nuts, and wire and pyro cable cutters

Glenair has taken a different path in the development of non-explosive HDRMs and other space mechanisms with a consumable initiator which, post-actuation, allows the device to be refurbished and reset on-site, or at the factory. Glenair fusable wire-actuated nut technology solves all of the problems associated with conventional explosive hold down and release devices.

Glenair family of pin pushers and pin pullers are low-shock mechanisms comprised of a spring-loaded pin held in place using the same fusable wire-actuated technology found in our hold down release mechanisms. Once actuated the restraining fuse wire breaks under tension causing the pin to retract under the force of the drive spring. The effects from the release of any potential energy in the loaded spring during actuation are countered by a measured delivery system to limit the effects of shock.

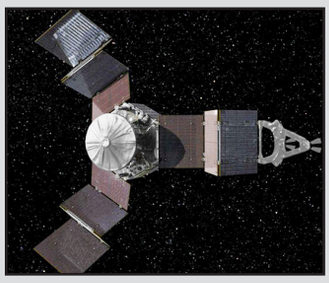
All three key components of Glenair space mechanisms (preloading assembly, release actuator, and load-carrying structure) may be packaged according to specific customer requirements including connectorization in place of wire leads. Packaging options include cylindrical or rectangular housings, lightweight materials, unique shapes and profiles, non-standard mounting dimensions and more. Consult the factory for complete information and TR Level qualification test reports.

SCALABLE DESIGNS: FROM CUBESATS TO 20,000 POUND PAYLOADS

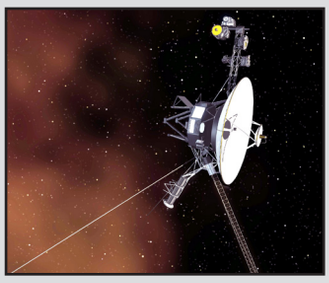
- **Fuse-wire based technology**
- **Redundant or non-redundant actuation circuit**
- **Space-rated and screened materials**
- **Electrical initiation up to 5 amps**

Build-to-spec solutions also available, including connectorized HDRMs, band porch shield termination feed-thrus and power draw resistors. Connectorized Solution above shown with Series 806 Mighty Mouse

DEPLOYMENT APPLICATIONS

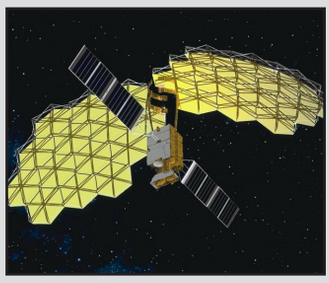


Solar Arrays



Booms and Masts

Antennas

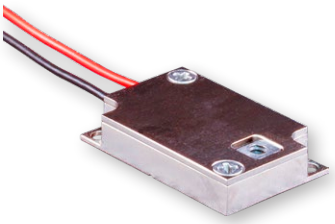


Reflectors

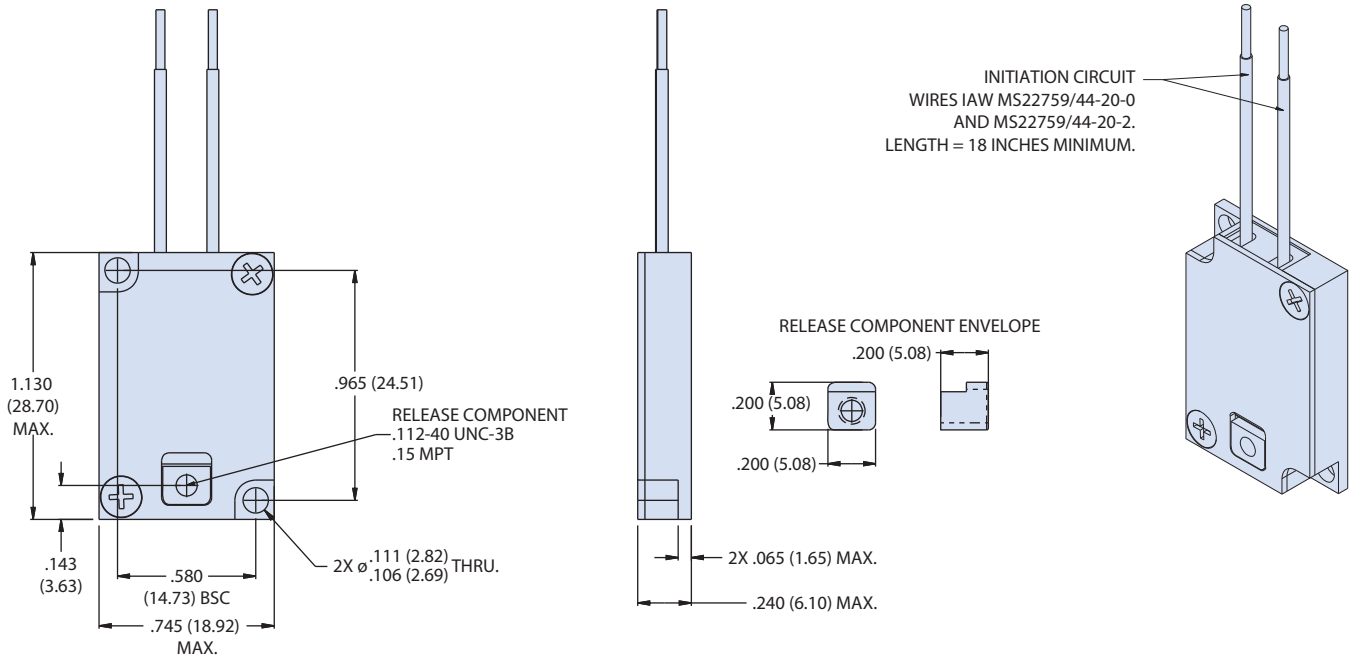
Light-duty hold-down release mechanism

5 lb. (Delrin) or 20 lb. (Stainless Steel) release preload
Non-redundant circuit

NON-REDUNDANT CIRCUIT HOLD DOWN RELEASE MECHANISM, LIGHT DUTY



How To Order			
Sample Part No.	**061**	**-002**	**-S**
Basic Part No.	Light/Medium Duty HDRM		
Dash No.	Non-Redundant Circuit		
Release Component Material	**S** - Stainless Steel **D** - Delrin		



NOTES

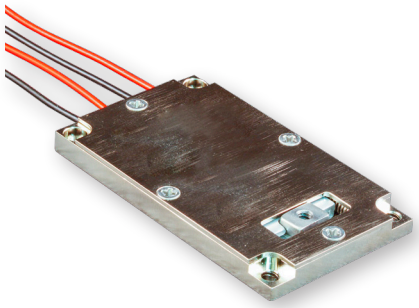
1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting.
2. Release preload:
   Stainless steel release component: max. limit 20 lbs (89 N)
   Delrin release component: max. limit 5 lbs (22 N)
3. Full qualification pending
4. Reference Glenair P/N 060-102 for refurbishment initiator
5. Metric threads available, consult factory for options

Physical characteristics	
Mass	9 grams nominal weight
Release component thread	0.112-40 UNC-3B*
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Consult factory for connectorization options
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	

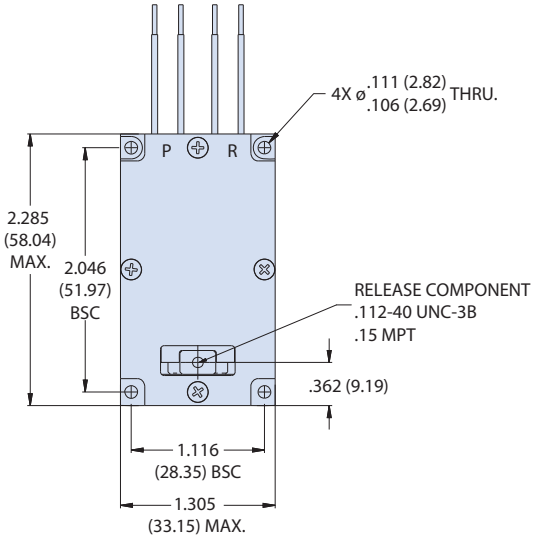
Light-duty hold-down release mechanisms

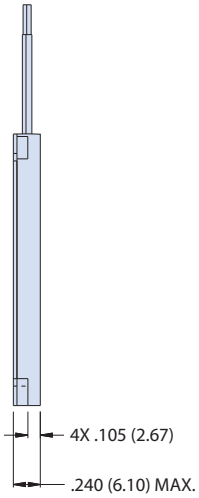
30 lb. (Stainless Steel) release preload
Electrically Redundant

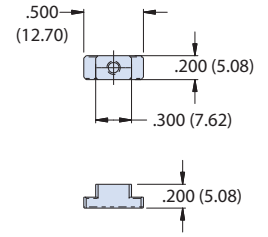
ELECTRICALLY REDUNDANT HOLD DOWN RELEASE MECHANISM, LIGHT DUTY

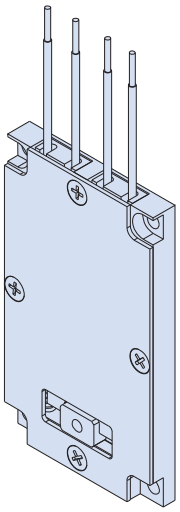


How To Order		
Sample Part No.	**061**	**-003**
Basic Part No.	Light/Medium Duty HDRM	
Dash No.	Redundant Circuit	









Physical characteristics	
Mass	27.8 grams nominal weight
Release component thread	0.112-40 UNC-3B*
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Redundant initiation	2 initiation points
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Consult factory for connectorization options
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	

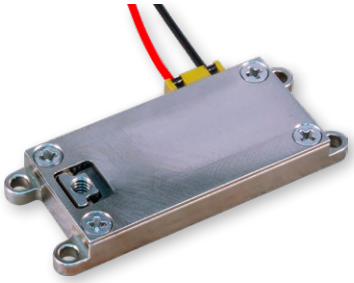
NOTES

1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Release preload 30 lbs. (133 N)
3. Full qualification pending
4. Reference Glenair P/N 060-103 for refurbishment initiator
5. Metric threads available, consult factory for options

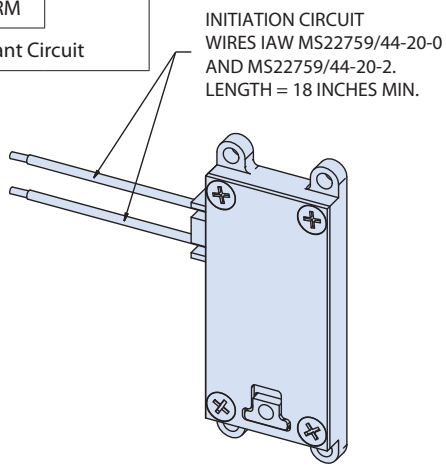
Light-duty hold-down release mechanism

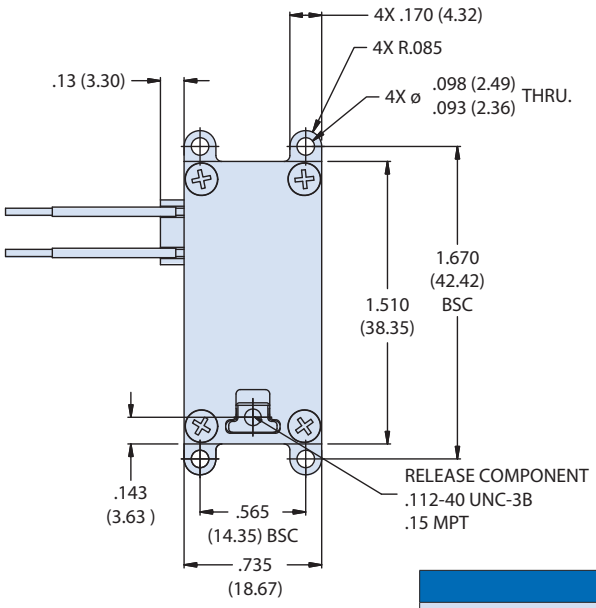
75 lb. release preload
Non-redundant circuit • side load

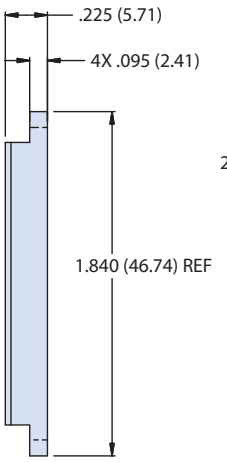
NON-REDUNDANT CIRCUIT HOLD DOWN RELEASE MECHANISM, LIGHT DUTY

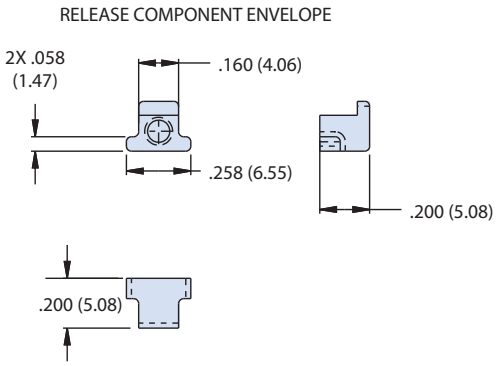


How To Order		
Sample Part No.	**061**	**-014**
Basic Part No.	Light/Medium Duty HDRM	
Dash No.	Side Load, Non-Redundant Circuit	









NOTES

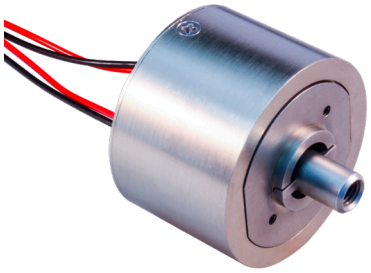
1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Release preload: 75 lbs. (334N)
3. Full qualification complete, consult factory for test report.
4. Reference Glenair P/N 060-114 for refurbishment initiator
5. Metric threads available, consult factory for options

Physical characteristics	
Mass	20.6 grams approximate weight
Release component thread	0.115-40 UNC-3B*
Material list	IAW MSFC-STD-3029
Device features	
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Consult factory for connectorization options
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	

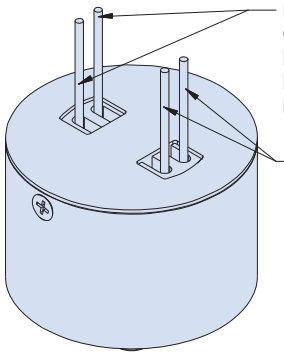
Medium-duty hold-down release mechanism

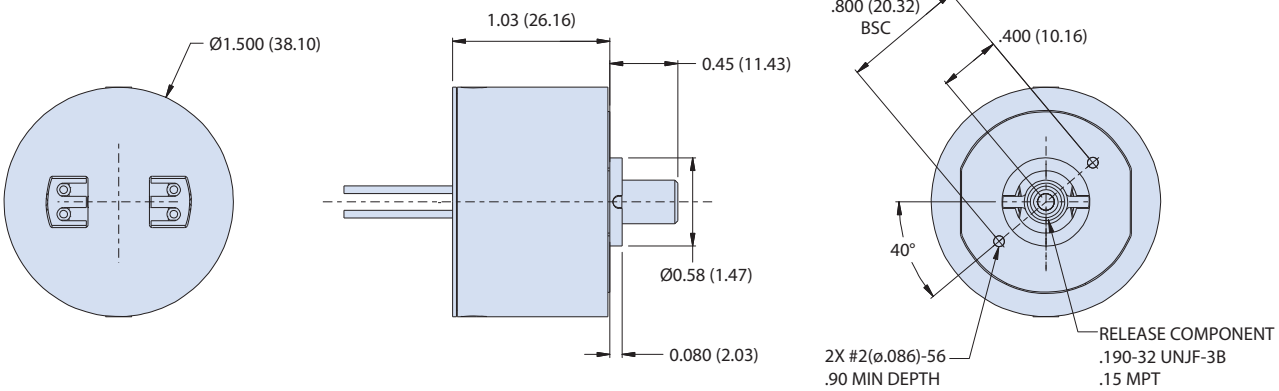
2500 lb. release preload
Electrically redundant

ELECTRICALLY REDUNDANT HOLD DOWN RELEASE MECHANISM, MEDIUM DUTY



How To Order		
Sample Part No.	**061**	**-005**
Basic Part No.	Light/Medium Duty HDRM	
Dash No.	Redundant Circuit	





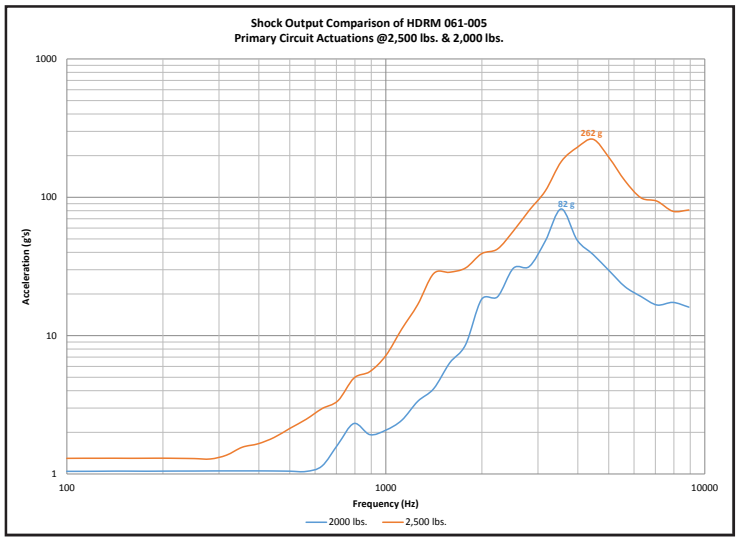
NOTES

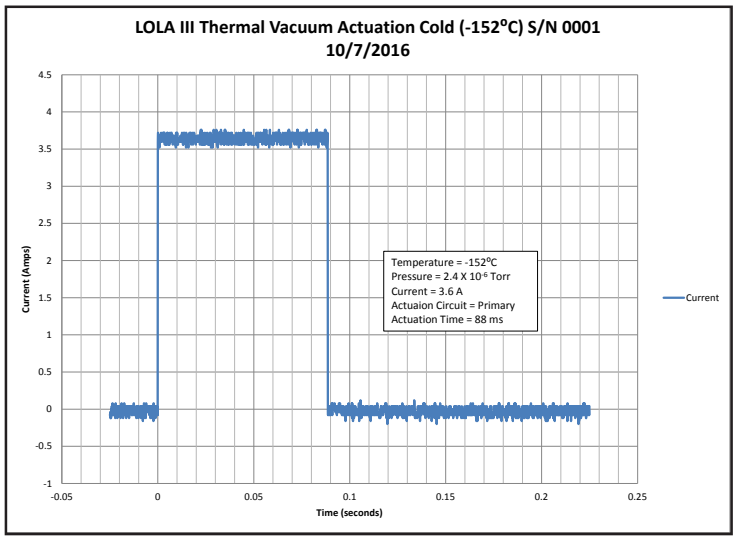
1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Release preload 2500 lbs. (11.1 kN)
3. Reference Glenair P/N 060-105 for refurbishment initiator
4. Nominal actuation current 3.5 Amps
5. Metric threads available, consult factory for options

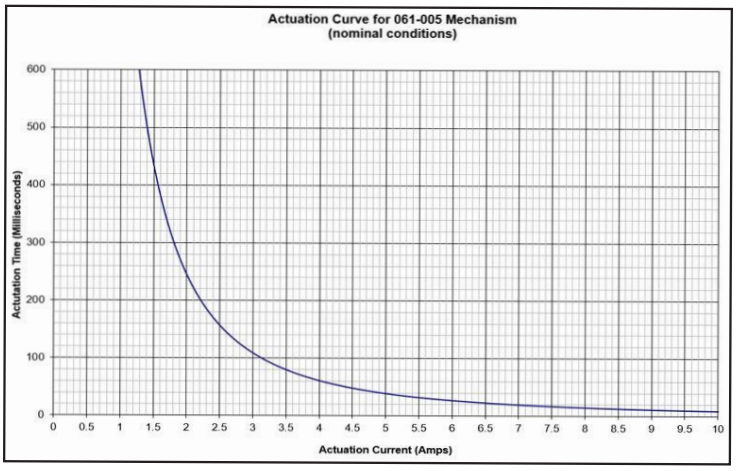
Physical characteristics	
Mass	74 grams nominal weight
Release component thread	0.190-32 UNJF-3B*
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Redundant initiation	2 initiation points
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Reliability prediction	0.9999994
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Connectorized versions available
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	

Medium-duty hold-down release mechanism

2500 lb. release preload
Summary of qualification test data





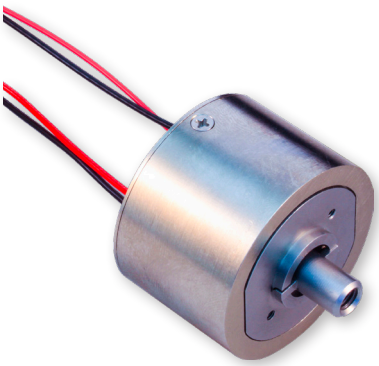


Tested Capability for 061-005	
Nominal Release Preload	2,250 pounds
Proof Preload	2,500 pounds
Ultimate Load	3,250 pounds
Electrical Resistance	1.5 ohms max
Sine Vibration 3 orthogonal axes	25 G's
Random Vibration 3 orthogonal axes	50.9 G_{rms}
Actuation Time	Under 100 ms @3.5 Amps
Shock Input	2,849 G's
Source Shock	Under 300 G's @2,500 pounds
Life Test	10 refurbishments during qualification and an expected continued usage
Temperature	-150°C to +150°C released in a vacuum (1x10-6 Torr)
Extended Preload	<4.0% loss

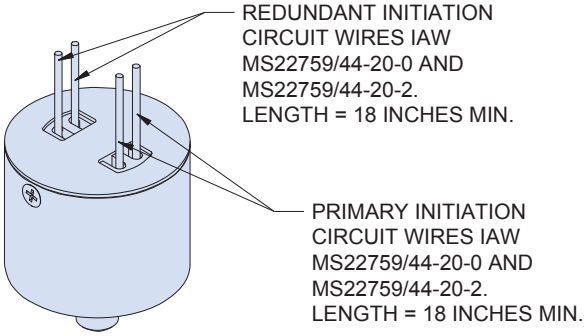
Medium-duty hold-down release mechanism

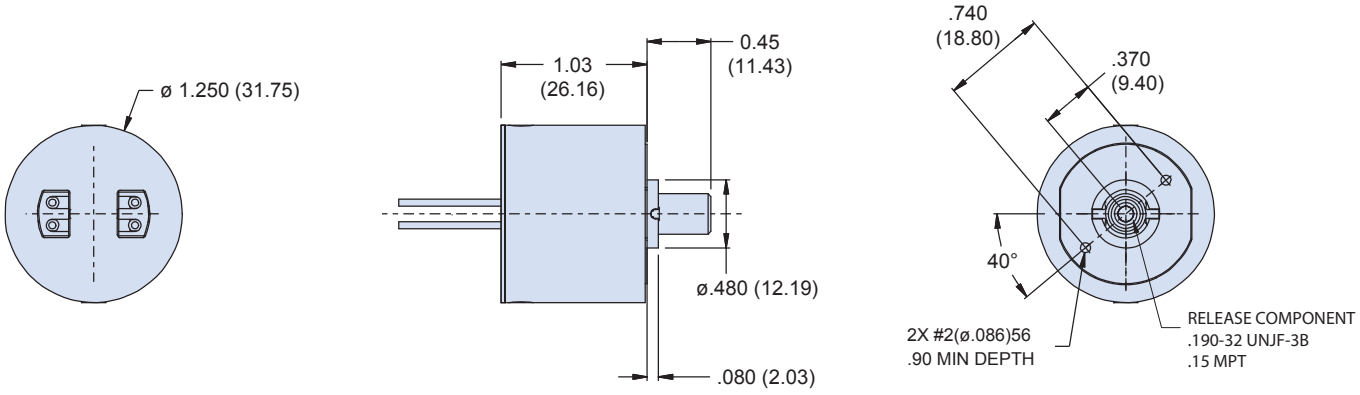
1000 lb. release preload
Electrically redundant

ELECTRICALLY REDUNDANT HOLD DOWN RELEASE MECHANISM, MEDIUM DUTY



How To Order		
Sample Part No.	**061**	**-006**
Basic Part No.	Light/Medium Duty HDRM	
Dash No.	Redundant Circuit	





NOTES

1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Release preload 1000 lbs. (4.5 kN) on similar model, contact factory
3. Qualification complete
4. Reference Glenair P/N 060-106 for refurbishment initiator
5. Metric threads available, consult factory for options

Physical characteristics	
Mass	45.2 grams approximate weight
Release component thread	0.190-32 UNJF-3B*
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Redundant initiation	2 initiation points
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Reliability prediction	0.9999994 (based off scaled design)
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Connectorized versions available
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.

Actuation curve

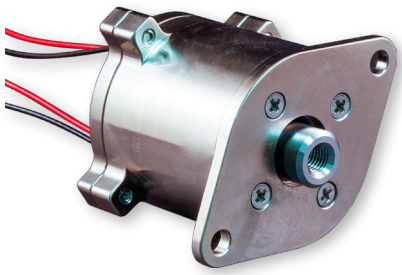
Heavy-duty hold-down release mechanism

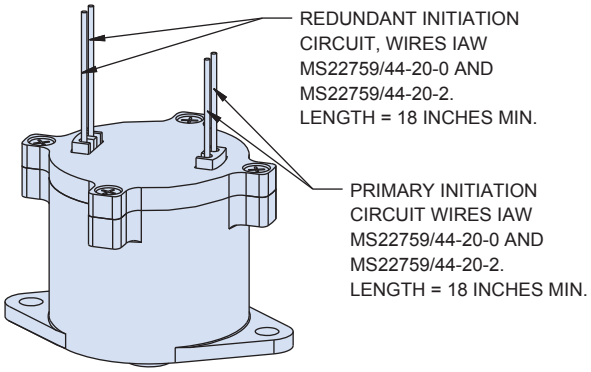
5000 lb. release preload
Electrically redundant

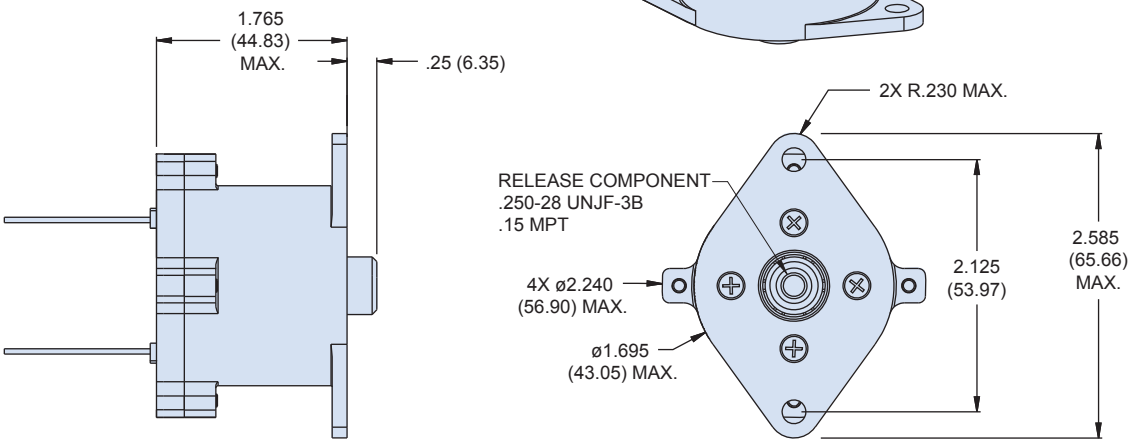
A

ELECTRICALLY REDUNDANT HOLD DOWN RELEASE MECHANISM, HEAVY DUTY



How To Order		
Sample Part No.	**062**	**-002**
Basic Part No.	Heavy Duty HDRM	
Dash No.	Redundant Circuit	



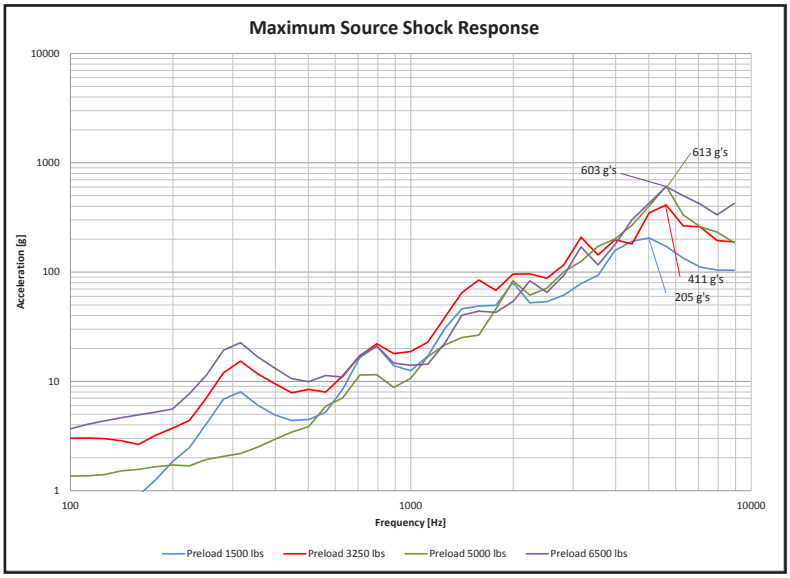


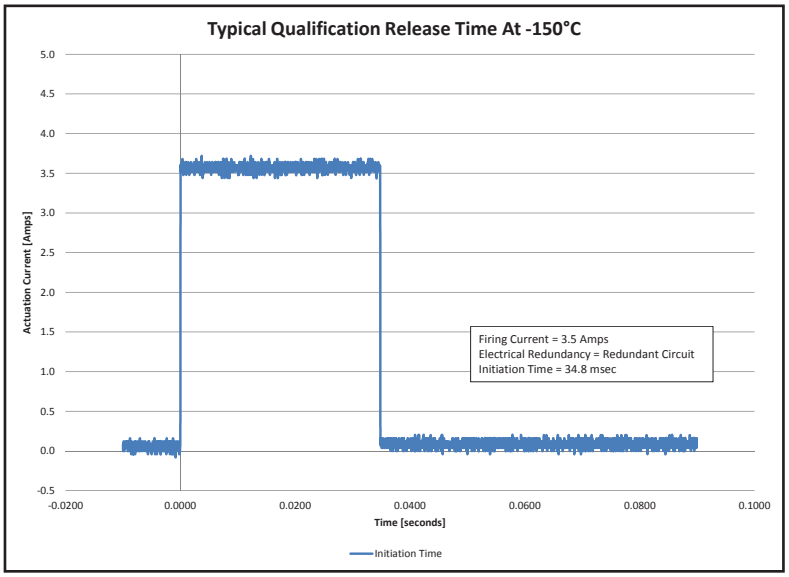
Available 069-201 mechanical release for use in place of refurbishment initiator. Consult factory for application notes.

Physical characteristics	
Mass	241 grams nominal weight with 18 inch lead wire included
Release component thread	0.250-28 UNJF-3B*
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Redundant initiation	2 initiation points
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Reliability prediction	0.9999995
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Connectorized versions available
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Complete test report available upon request	

Heavy-duty hold-down release mechanism

5000 lb. release preload
Summary of qualification test data





NOTES

1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Release preload 5000 lbs. (22.4 kN)
3. Reference Glenair P/N 060-202 for refurbishment initiator
4. Qualification test complete
5. Metric threads available, consult factory for options

Tested capability for ¼ inch unit*	
Nominal Release Preload	5,000 pounds
Proof Preload	6,500 pounds
Ultimate Load	8,000 pounds
Electrical resistance	1.50 ohms Max
Random vibration: 3 orthogonal axes	50.9 G_{rms}
Sine vibration: 3 orthogonal axes	25 G's
Actuation time	Under 45 ms @ 3.5 Amps
Source shock	Under 625 G's @ 5,000 pounds
Life test	10 refurbishments during qualification and an expected continued usage
Temperature	-150°C to +150°C released in a vacuum ($1x10^{-6}$ Torr)
*The size callout is based off the bolt size that is to be used. Metric thread can also be called out. Complete test report available upon request	

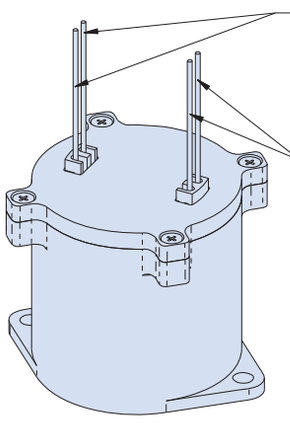
Heavy-duty hold-down release mechanisms

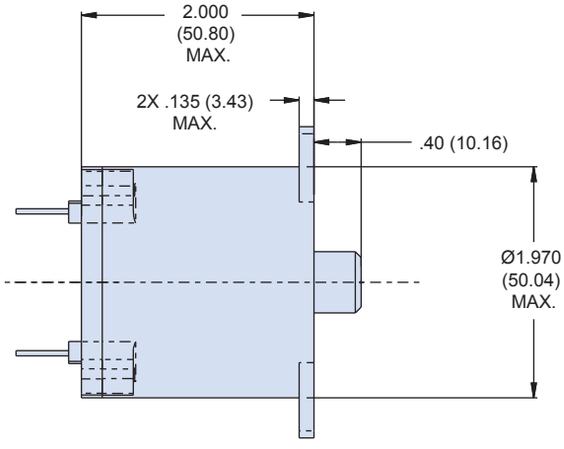
8750 lb. release preload
Redundant circuit

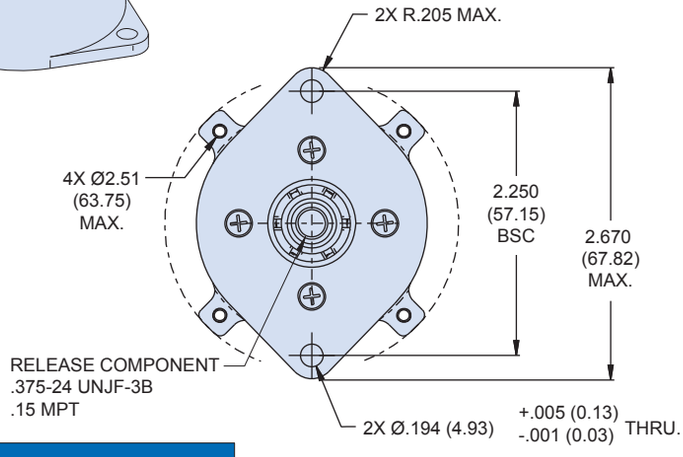
A

REDUNDANT CIRCUIT HOLD DOWN RELEASE MECHANISM, HEAVY DUTY

How To Order		
Sample Part No.	**063**	**-001**
Basic Part No.	Heavy Duty HDRM	
Dash No.	Redundant Circuit	







Physical characteristics	
Mass	335 grams approximate weight
Bolt	0.375-24 UNJF-3B*
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Redundant initiation	2 initiation points
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Reliability prediction	0.9999995 (based off scaled design)
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Connectorized versions available
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	

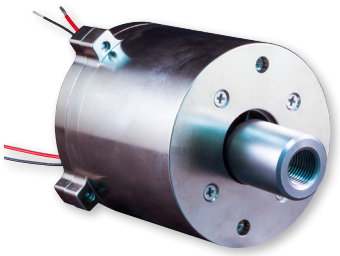
NOTES

1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Release preload: 8,750 lbs. (38.9 kN) Proof load: 12500 lbs. (55.6 kN) Ultimate preload: 16500 lbs. (73.4 kN) min.
3. Full qualification pending
4. Reference Glenair P/N 060-301 for refurbishment initiator
5. Metric threads available, consult factory for options

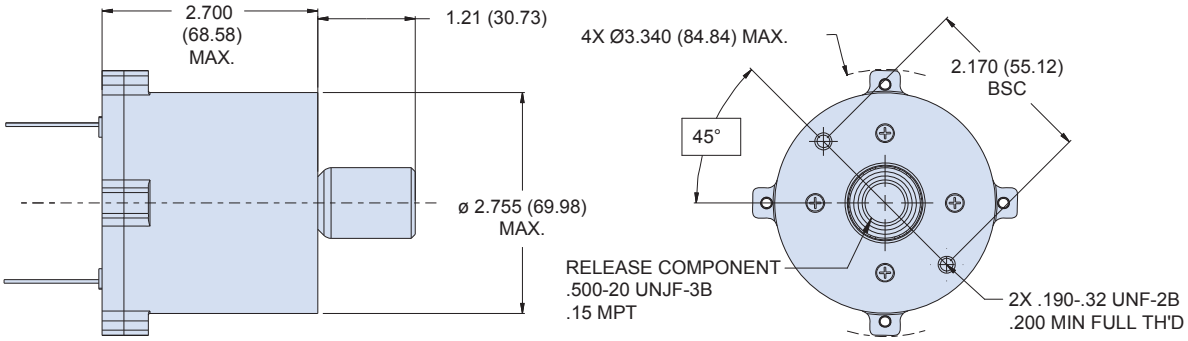
Heavy-duty hold-down release mechanisms

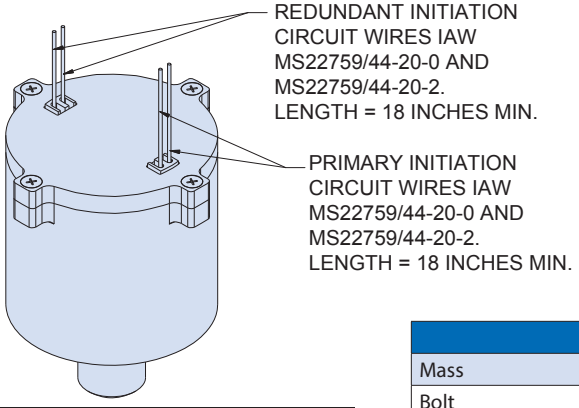
20,000 lb. release preload
Electrically redundant

ELECTRICALLY REDUNDANT HOLD DOWN RELEASE MECHANISM, HEAVY DUTY



How To Order		
Sample Part No.	**064**	**-001**
Basic Part No.	Heavy Duty HDRM	
Dash No.	Redundant Circuit	





Available 069-401 mechanical release for use in place of refurbishment initiator. Consult factory for application notes.

NOTES

1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Release preload 20,000 lbs. (88.9 kN)
3. Full qualification pending
4. Reference Glenair P/N 060-401 for refurbishment initiator
5. Metric threads available, consult factory for options

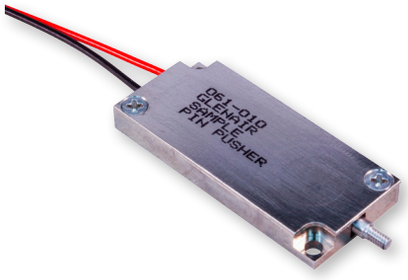
Physical characteristics	
Mass	870.4 grams nominal weight
Bolt	.500-20 UNJF-3B*
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Redundant initiation	2 initiation points
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Reliability prediction	0.9999995 (based off scaled design)
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Connectorized versions available
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for complete test report	

Light-duty pin pushers and pullers

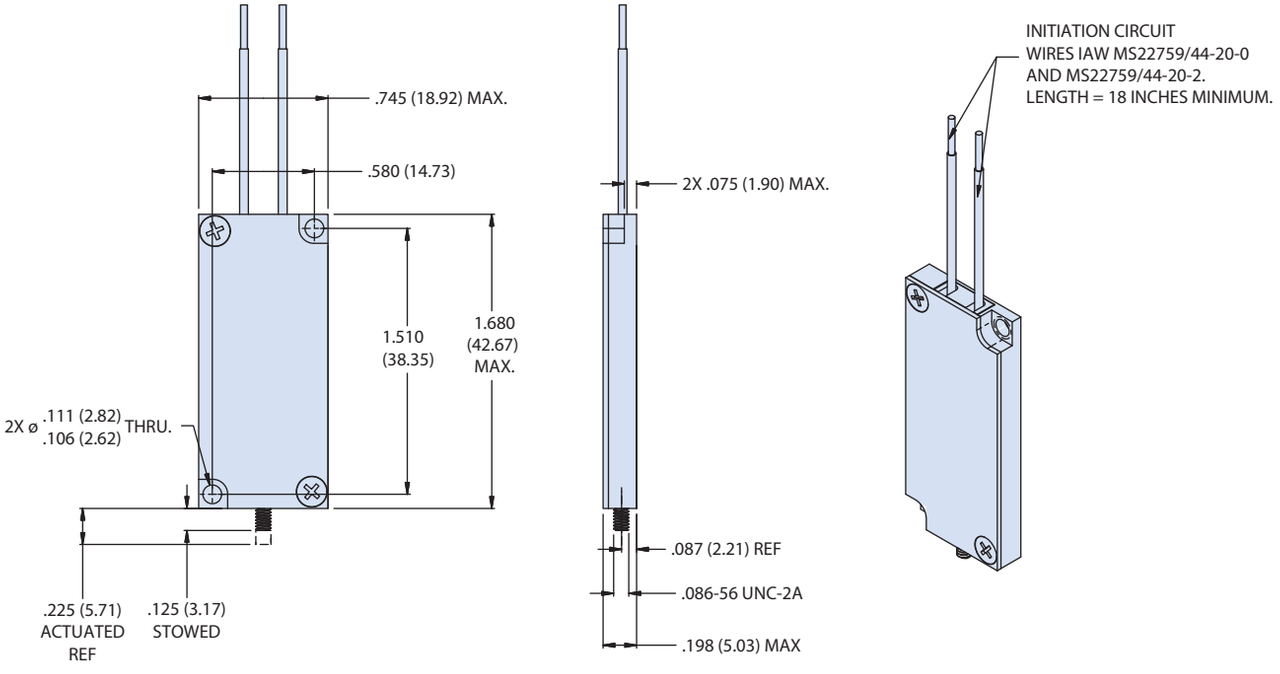
6 lb. push force
Non-redundant circuit

A

NON-REDUNDANT CIRCUIT PIN PUSHER MECHANISM, LIGHT DUTY



How To Order		
Sample Part No.	**061**	**-010**
Basic Part No.	Light-Duty Pin Pusher	
Dash No.	Non-Redundant Circuit	



NOTES

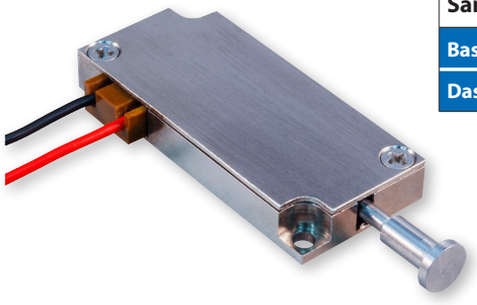
1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting.
2. Push load: 6 lbs. (26.7 N)
3. Full qualification pending
4. Reference Glenair P/N 060-711 for refurbishment initiator
5. Metric threads available, consult factory for options

Physical characteristics	
Mass	15.2 grams approximate weight
Material list	IAW MSFC-STD-3029
Device features	
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	

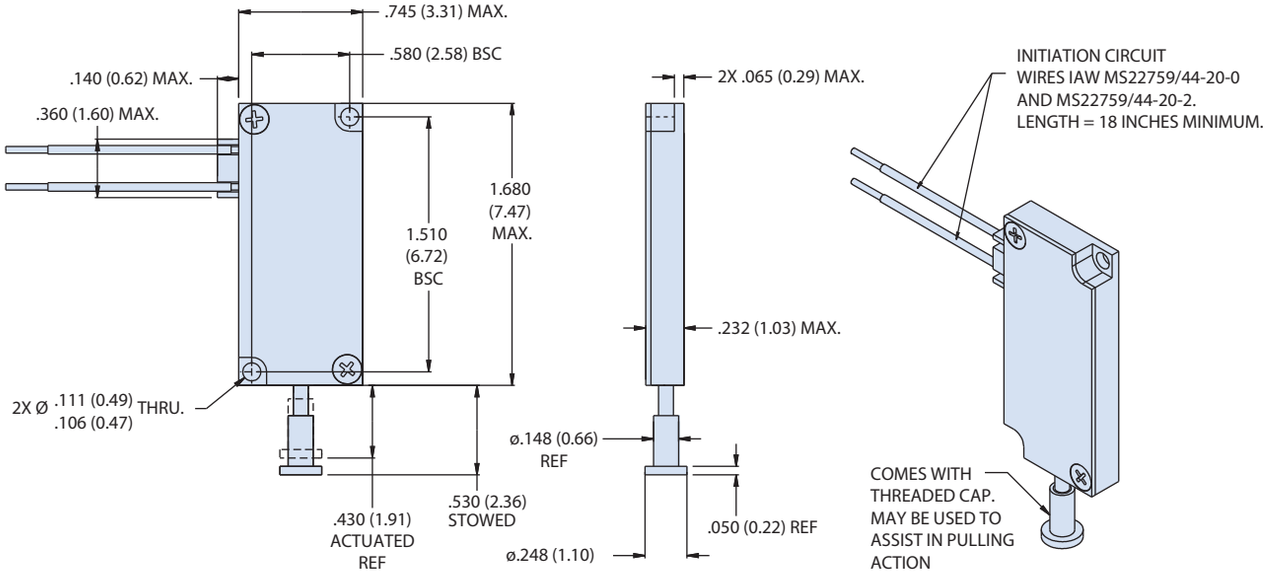
Light-duty pin pushers and pullers

18 lb. pull force
Non-redundant circuit

NON-REDUNDANT CIRCUIT PIN PULLER MECHANISM, LIGHT DUTY



How To Order		
Sample Part No.	**061**	**-009**
Basic Part No.	LIght-Duty Pin Puller	
Dash No.	Non-Redundant Circuit	



NOTES

1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting.
2. Release preload 18 lbs. (80 N)
3. Full qualification pending
4. Reference Glenair P/N 060-109 for refurbishment initiator
5. Metric threads available, consult factory for options

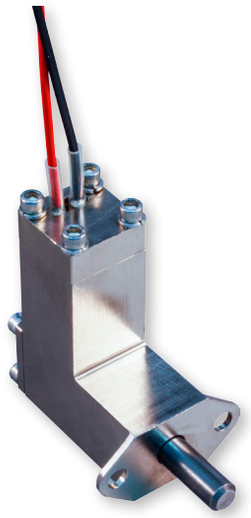
Physical characteristics	
Mass	16.2 grams nominal weight
Material list	IAW MSFC-STD-3029
Epoxy	Outgassing requirements per GSC19384
Device features	
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Scalable bolt size	Bolt size determines preload and can be scaled to accommodate a wide range of requirements
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for complete test report	

Light-duty pin pushers and pullers

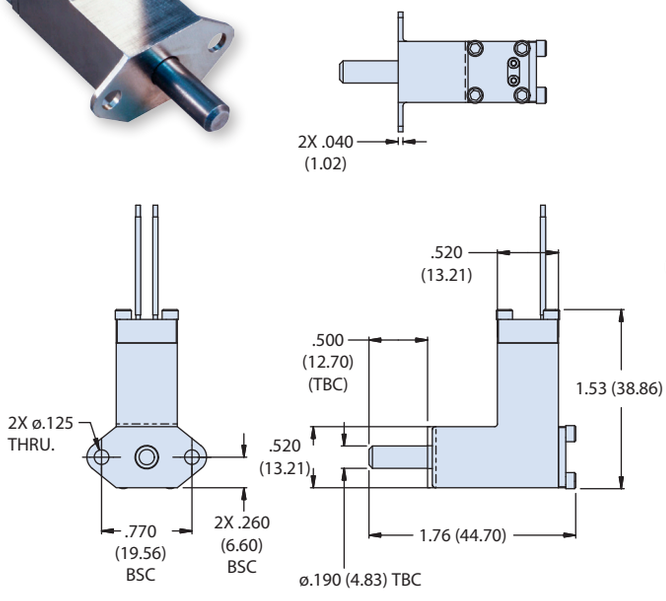
18 lb. pull force
Non-redundant circuit

A

NON-REDUNDANT CIRCUIT PIN PULLER MECHANISM, LIGHT DUTY



How To Order		
Sample Part No.	**061**	**-011**
Basic Part No.	Light-Duty Pin Puller	
Dash No.	Non-Redundant Circuit	



NOTES

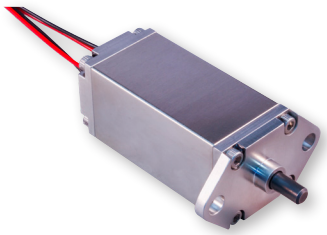
1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting.
2. Release preload: 18 lbs. (80.1 N) (TBC)
3. Full qualification pending
4. Reference Glenair P/N 060-112 for refurbishment initiator

Physical characteristics	
Mass	34.8 grams approximate weight
Material list	IAW MSFC-STD-3029
Device features	
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Connectorized versions available
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	

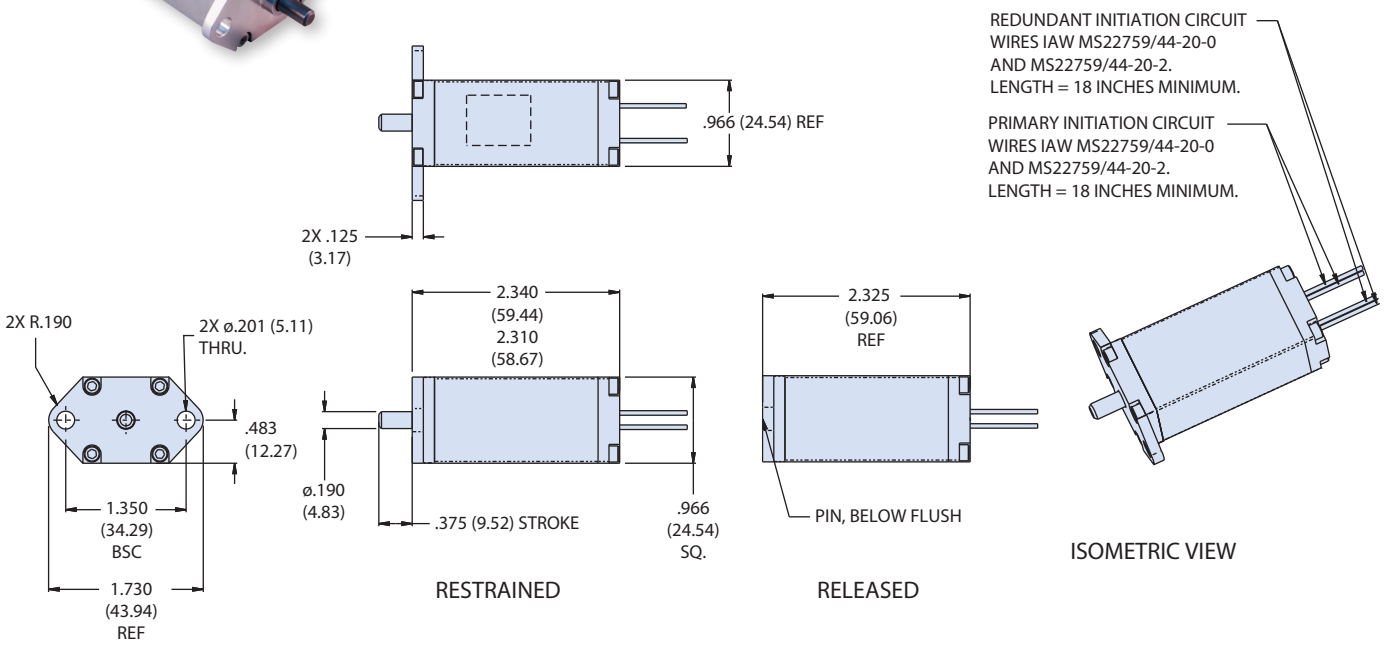
Medium-duty pin pushers and pullers

50 lb. pull force
Electrically redundant

ELECTRICALLY REDUNDANT PIN PULLER MECHANISM, MEDIUM DUTY



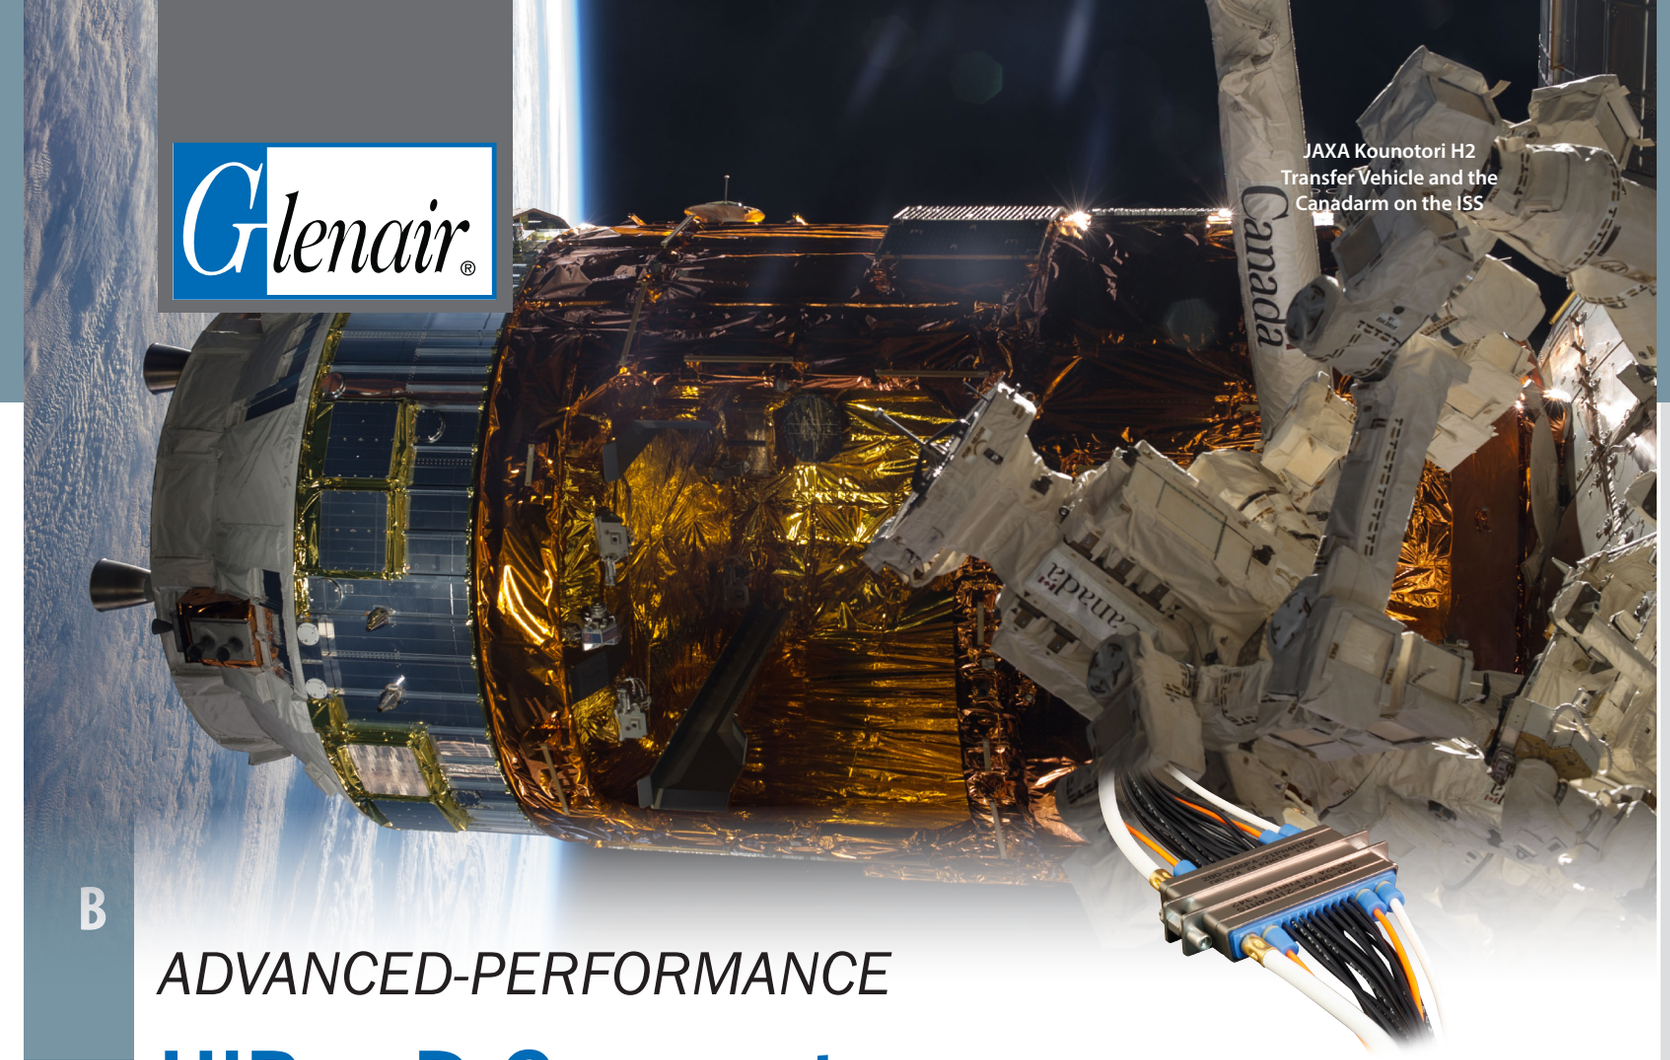
How To Order		
Sample Part No.	**061**	**-013**
Basic Part No.	Medium-Duty Pin Puller	
Dash No.	Redundant Circuit	



NOTES

1. Unit is identified with Glenair name, CAGE code, part number, and date code, space permitting. Primary initiation circuit identified with "P" and redundant with "R".
2. Pull force: 50 lbs. (222 N)
3. Full qualification pending
4. Reference Glenair P/N 060-711 for refurbishment initiator
5. Metric threads available, consult factory for options

Physical characteristics	
Mass	145.8 grams approximate weight
Material list	IAW MSFC-STD-3029
Device features	
Redundant initiation	2 initiation points
Field refurbishable	Initiator can be replaced in less than 15 minutes by trained personnel
Packaging	External housing typically supplied with two mounting points. Custom housings and mountings available
Connectorization	Standard design supplied with wire inputs. Connectorized versions available
*Size callout based on the bolt size to be used. Metric thread also available. Consult factory for qualification test report.	



JAXA Kounotori H2 Transfer Vehicle and the Canadarm on the ISS

B

ADVANCED-PERFORMANCE

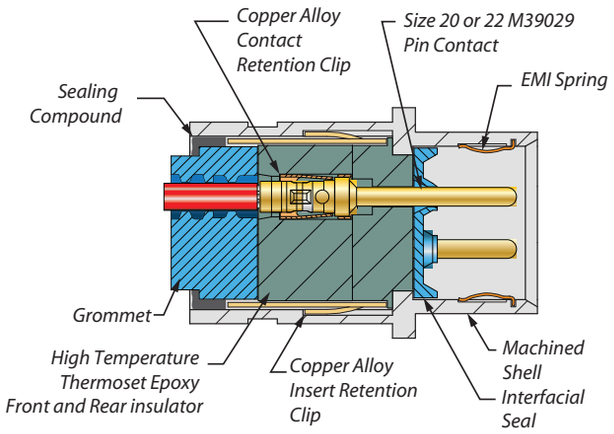
HiPer-D Connectors

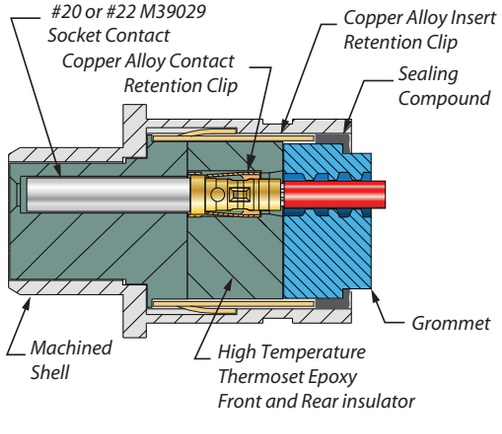
Space-grade M24308 intermateable

The HiPer-D connector is a M24308-type D-Subminiature connector with superior design features. Unlike standard M24308 connectors with stamped steel shells, the HiPer-D connector features such as a one-piece machined shell, 200°C continuous operating temperature rating and enhanced, mated shell EMI/RFI protection via an integrated ground spring. Aerospace grade fluorosilicone grommets and face seals (JAXA / NASA outgassing available) provide environmental protection. The HiPer-D is intermateable, intermountable and interchangeable with standard M24308 D-Sub connectors.

- **Advanced temperature, vibration and EMC/ electrical performance**
- **11 standard and 20 combo insert arrangements**
- **High temperature epoxy insulators**
- **Watertight sealing**
- **Rugged machined one-piece shell**

STANDARD AND HIGH DENSITY HIPER-D® - CUTAWAY



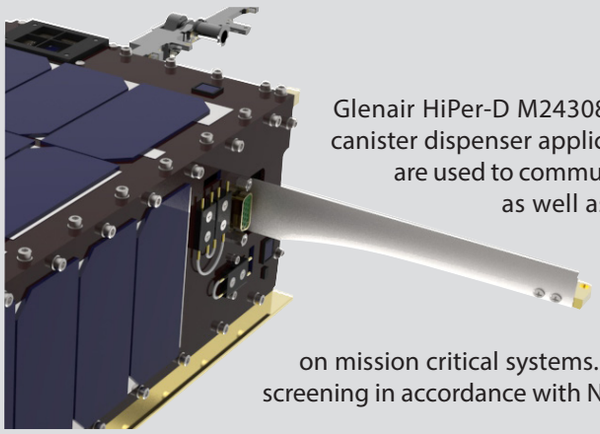


SERIES 28

HiPer-D Space Grade Connectors

Product Selection Guide

B



Glenair HiPer-D M24308 D-sub connectors are ideally suited for CubeSat or NanoSat canister dispenser applications where rack and panel or connectorized wire assemblies are used to communicate with HDRMs, pin pullers, pin pushers, door status sensors, as well as system communications and testing prior to deployment of satellite equipment. Standardized usage of M24308 connectors on hardware interfaces simplifies interconnection and communication. Glenair HiPer-D space grade M24308 D-sub connectors eliminate potential interconnect electrical problems on mission critical systems. Connectors are supplied with NASA/ESA/JAXA outgassing and screening in accordance with NASA EEE-INST-0002.

HiPer-D Space Grade Connectors

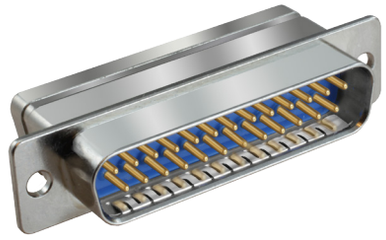
Reference and Technical Data

Description	Requirement	Procedure
Voltage Rating (DWV)	1000 VAC Sea Level	EIA-364-20
Operating Temperature	-65º C. to +200º C.	
Insulation Resistance	5000 megohms minimum	EIA-364-21
Current Rating	Size #20 7.5A, #22 5A	
Contact Resistance	**Wire Size** / **Test Current** / **Millivolt Drop** 20 / 7.5 / 55 22 / 5 / 73 24 / 3 / 45	EIA-364-06
Low Level Contact Resistance	**Wire Size** / **Max Milliohms** 20 / 9 22 / 15 24 / 20	EIA-364-23
Shell-to-Shell Resistance	2.5 milliohm max (ground spring required)	EIA-364-83
Shielding Effectiveness	**Freq. GHz** / **Min Attenuation (dB)** 0.1 / 100 0.4 / 90 0.8 / 85 1.0 / 80 3.0 / 55 6.0 / 40 10.0 / 30	EIA-364-66 Electroless nickel plated shells with ground spring installed
Water Immersion, mated	1 hour immersion at a depth of 1 meter	MIL-STD-810F Method 512.4
Ingress Protection Rating	IP67, mated connectors	IEC-60529
Vibration, Sine	20 g's	EIA-364-28
Vibration, Random	43 g's	EIA-364-28
Mechanical Shock	300 g's	EIA-364-27
Thermal Shock	-65º C. to +200º C.	EIA-364-32
Humidity	10 cycles, 10 days, 25ºC to 65ºC	EIA-364-31
Altitude Immersion	75,000 feet	EIA-364-03
Fluid Immersion	No damage from solvents, oils, and fuels	EIA-364-10
Magnetic Permeability	2 µ maximum	EIA-364-54
Mechanical Durability	500 Mating Cycles	EIA-364-09

Description	Material	Finish
Contacts	Copper Alloy	Gold (50 microin.) over nickel
Socket Contact Hood (Size 20, 22)	Stainless steel	Passivated
Shell	Aluminum Alloy or stainless steel	See ordering information
Insulators	Thermoset epoxy resin per ASTM D-5948	None
Interfacial Seal	Fluorosilicone	None
Grommet	Fluorosilicone	None
EMI Spring	Copper alloy	Electroless nickel
Contact retention clips	Copper alloy	None
Insert retention clip	Copper alloy	None
Sealant	RTV silicone	None
Hardware	Stainless steel (300 series)	Passivated
O-ring	Fluorosilicone	None

HiPer-D Space Grade Connectors

280-018P inline cable or panel mount pin connector, crimp termination



HiPer-D pin connectors for cable or panel mount feature crimp, rear-releaseable size #20 or #22 contacts. Intermateable with standard M24308-type D-Subminiature connectors, the HiPer-D features a rugged machined aluminum shell, waterproof sealing and optional ground springs for improved resistance to electromagnetic interference. Gold-plated size #20 contacts conform to M39029/64-369 and accept #20 to #24 AWG wire. Gold-plated size #22 contacts conform to M39029/58-360 and accept #22 to #28 AWG wire. Contacts are packaged with connector. Glass-reinforced thermoset epoxy insulators, copper alloy retention clips. Fluorosilicone face seal and rear grommet meet IP67 immersion requirement. 1000 VAC, 5 Amps (#22) or 7.5 Amps (#20).

NOTES

1. HiPer-D connectors are available with a wide variety of materials and finishes. See ***About Series 28 HiPer-D® Shell Plating Options*** for additional choices . Glenair offers the industry's widest selection of plating and material choices with no setup charge, no minimum order quantity and no schedule impact.
2. For panel cutout dimensions, refer to ***Panel Cutouts and Printed Circuit Board Footprints***.
3. Connectors are supplied with crimp contacts per M39029. Contacts are not installed. Refer to ***HiPer-D® Contacts and Crimp Tools*** for contact part numbers, specifications, crimp tool information, and insertion/extraction tools.
4. HiPer-D connectors meet the requirements of MIL-DTL-24308 and are intermateable with standard M24308-type D-Subminiature connectors with corresponding contact arrangements and type.
5. Additional electrical, mechanical and environmental specifications are listed in ***HiPer-D® Product Specification***.

HiPer-D Space Grade Connectors

280-019S inline cable or panel mount socket connector,crimp termination

HiPer-D socket connectors for in-line cable or panel mount feature crimp, rear-releaseable size #20 or #22 contacts. Intermateable with standard M24308-type D-Subminiature connectors, the HiPer-D features a rugged machined aluminum shell and waterproof sealing. Gold-plated size #20 contacts conform to M39029/63-368 and accept #20 to #24 AWG wire. Gold-plated size #22 contacts conform to M39029/57-354 and accept #22 to #28 AWG wire. Contacts are packaged with connector. Glass-reinforced thermoset epoxy insulators, copper alloy retention clips. Fluorosilicone rear grommet meets IP67 immersion requirement. Shell has backshell attachment groove. 1000 VAC, 5 Amps (#22) or 7.5 Amps (#20).

HiPer-D Space Grade Connectors

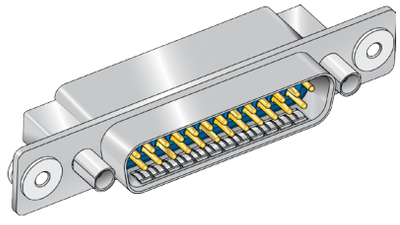
280-030P float mount pin connector for blind mating with float bushings or guide pins, crimp termination



280-030P HiPer-D pin connectors feature stainless steel float bushings for blind mating. Attach to panel with #4-40 screws (not supplied with connector). Crimp, rear-releaseable size #20 or #22 contacts. Intermateable with standard M24308-type D-Subminiature connectors, the HiPer-D features a rugged machined aluminum shell, rubber seals and optional ground springs for improved resistance to electromagnetic interference. Threaded holes on the rear of the connector allow direct attachment of HiPer-D EMI backshells. Contacts are packaged with connector. Terminate contacts with crimp tools purchased separately. Glass-reinforced thermoset epoxy insulators, copper alloy retention clips. Fluorosilicone face seal and rear grommet meet IP67 immersion requirement (mated). 1000 VAC, 5 Amps (#22) or 7.5 Amps (#20).

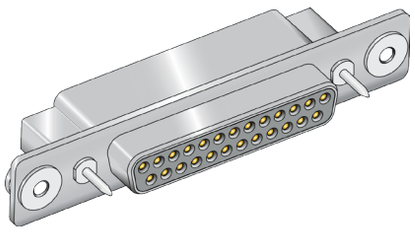
NOTES

1. HiPer-D connectors are available with a wide variety of materials and finishes. See ***About Series 28 HiPer-D® Shell Plating Options*** for additional choices . Glenair offers the industry's widest selection of plating and material choices with no setup charge, no minimum order quantity and no schedule impact.
2. For panel cutout dimensions, refer to ***Panel Cutouts and Printed Circuit Board Footprints***.
3. Connectors are supplied with crimp contacts per M39029. Contacts are not installed. Refer to ***HiPer-D® Contacts and Crimp Tools*** for contact part numbers, specifications, crimp tool information, and insertion/extraction tools.
4. HiPer-D connectors meet the requirements of MIL-DTL-24308 and are intermateable with standard M24308-type D-Subminiature connectors with corresponding contact arrangements and type.
5. Additional electrical, mechanical and environmental specifications are listed in ***HiPer-D® Product Specification***.

HiPer-D Space Grade Connectors

280-031S float mount socket connectors for blind mating with float mount bushings or guide pins, crimp termination



280-031S HiPer-D socket connectors feature stainless steel floating bushings for blind mate applications. Attach to panel with #4-40 screws (not supplied with connector). Crimp, rear-releaseable size #20 or #22 contacts. Intermateable with standard M24308-type D-Subminiature connectors, the HiPer-D features a rugged machined aluminum shell and rubber grommet. Threaded holes on the rear of the connector allow attachment of HiPer-D EMI backshells. Contacts are packaged with connector. Terminate contacts with crimp tools purchased separately. Glass-reinforced thermoset epoxy insulators, copper alloy retention clips. Connector meets IP67 immersion requirement. 1000 VAC, 5 Amps (#22) or 7.5 Amps (#20).

SuperNine®

Space-Grade Circular Blind-Mate Connectors

Application: Glenair Series 253 blind-mate connectors are designed to meet applicable environmental, electrical and mechanical performance characteristics of D38999 Series III. The technology is well suited for use in commercial rack-and-panel instrumentation applications, as well as a blind-mate solution for satellite deployment, scientific research and development payloads, interstage, UAV, and munitions release and more.

- **Blind-mate, fixed and float-mount interconnects for non-ITAR commercial as well as military/defense applications**
- **Adjustable separation force (AKA assisted-release, zero extraction force) solutions**
- **Misalignment accommodation and special auxiliary sealing for trouble-free blind mating in environmental applications**
- **Available in most symmetrical MIL-STD-1560 insert arrangements with contacts sizes from #23 to #8**
- **Selected materials offer low outgassing properties and high resistance to both corrosion and stress corrosion cracking**
- **NASA outgassing bake-out process available**
- **Designed to withstand the rigors of launch and flight—including shock, vibration, thermal vacuum, acceleration, and temperature extremes**
- **Standard accessory threads and teeth per MIL-DTL-38999 accommodate a wide range of backshell accessories**
- **Crimp-removable contacts standard. Consult factory for PC tails, dual-flange standoffs, custom blind-mate configurations, and hermetically sealed options**

CRITICAL MECHANICAL FEATURES OF BLIND-MATE AND ADJUSTABLE SEPARATION FORCE (ZEF) CONNECTORS

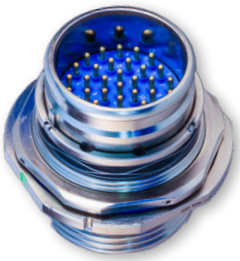
Roll-off nose: allows for the smooth disconnection of blind mate plugs and receptacles. Without this feature, connectors can catch or hang during mate and demate.

Float mounting: allows for a modicum of coplanar movement of the receptacle during rack-and-panel and other blind mate applications, preventing both contact and shell damage.

Misalignment accommodation: Additional radial, axial, and angular misalignment during mating is accounted for in the receptacle design with integral wave springs.

Sealing: Misalignment accommodation makes environmental sealing difficult in blind-mate connectors. The problem is solved with auxiliary external seals.

EMI shielding: Glenair incorporates ground springs in receptacle connectors as well as grounding fingers in special coupling nut-equipped plugs (253-018-G6 feed-thru shown) to optimize 360° shell-to-shell continuity.



Assisted separation force: Glenair supplies two styles of spring-loaded blind-mate connectors. **Adjustable kick-off styles** feature spring-loaded posts on the plug and an adjustment ring on the receptacle used to calibrate separation force. A second style uses wave springs on the shell body.

Available non-ITAR environmental blind-mate and adjustable separation force solutions		
Basic Part No.	**Description**	**Mates With**
253-014	Fixed jam-nut mount plug with roll-on/roll-off nose and Accessory threads	253-015
253-015	Floating jam-nut mount receptacle with misalignment accommodation and optional sealing	253-014
253-016	Fixed wall mount plug with spring assist (zero separation force)	253-017
253-017	Floating wall mount receptacle with adjustable separation force and misalignment accommodation	253-016
253-018-07	Blind-mate feed-thru, jam-nut mount plug with B-side D38999 type receptacle mating interface and assisted kick-off (spring force)	253-019

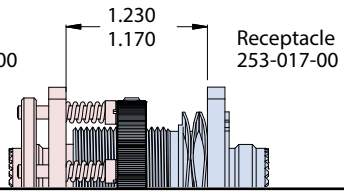
Al Alloy

Distance between mated flanges.

For reference only (not deliverable)



NOTES:

1. 253-017 mates with 253-016 fixed series.
2. Distance between mated mounting flanges: 1.170/1.230. Consult manufacturer other distance between mounting flanges is required
3. Separation force is adjustable ± 5 lbs when mated with 253-016 and 253-017 pairs have adjustable separation force of ±5 lbs
4. See Space-Grade guidelines material, in this section, for outgassing/screening options available
5. Spares: pin or socket contacts IAW AS39029 or per Glenair part number if controlled force contacts
6. Contact factory for PC tail versions
7. Material/finish
   - Shell (016 and 017), ring (017), retainer ring (016): see P/N development, finish
   - Wave spring(017), springs and spring retainer (016): CRES/ passivated
   - Insulators: high grade rigid dielectric/N.A.
   - Seals: fluorosilicone blend/N.A.

Space-grade, blind-mate connectors
Bulkhead feed-thrus with assisted kick-off
and standard triple-start plug and receptacle mating interfaces

Part Number Development						
Sample Part Number	**253-018**	**-07**	**ME**	**25-35**	**PP**	**N**
Series / Basic Part No.	**253-018** = Blind-mate feed-thru					
Connector Style	**-07** = Jam-nut mount, feed-thru plug (fixed) with rear D38999 type receptacle interface **-G6** = In-line plug with rear D38999 type plug interface and EMI spring					
Material/Finish	**ME** = Aluminum, electroless nickel **ZL** = CRES, electrodeposited nickel **MT** = Aluminum, nickel PTFE **Z1** = CRES, passivated					
Shell Size-Insert Arrangement*	Per MIL-STD-1560					
Contact Type	**PP** = Pin on both sides **BSDP** = Blind-mate side socket - D38999 side pin **SS** = Socket on both sides **BPDS** = Blind-mate side pin - D38999 side socket					
Alternate Polarization*	**A** = 40°, **B** = 65°, **C** = 80°, **D** = 210°, **E** =250°, **F** = 280°, **G** = 310°, **H**= 330°, **N** = 135° (Normal) Per L°. G6 only Refers to blind mate side. Plug/Receptacle side per MIL-DTL-38999					

***Refer to section A for complete details.** Refer to Space-Grade Guidelines material (IAW NASA EEE INST-002) for outgassing and screening modification codes, on pages 60 and 61. Modification codes may be added directly to the end of any valid part number

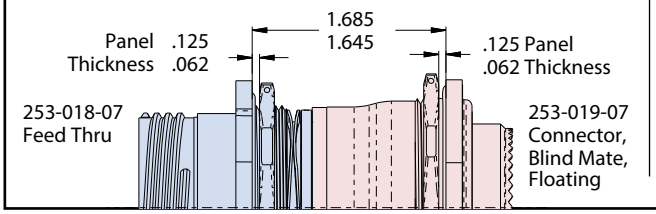
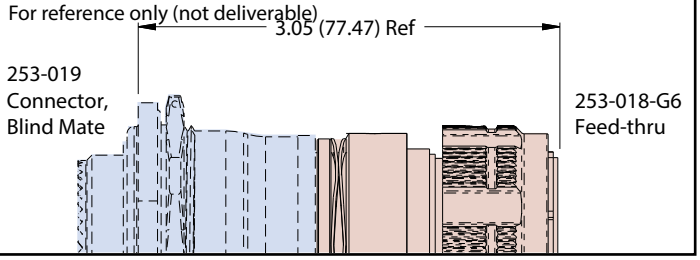
Distance between mated flanges.

For reference only (not deliverable)



Distance between mated connectors.

For reference only (not deliverable)



NOTES:

1. Mates with 253-019 and D38999 series III connectors with same insert arrangement and polarization
2. Distance between mated mounting flanges: 1.685/1.645. Consult manufacturer if other distance between mated mounting flanges is required
3. Misalignment capabilities are possible with mated pair reference Glenair connector 253-019.
4. See Space-Grade guidelines material, in this section, for outgassing/screening options available
5. Stainless steel locating pin (Ø.079) shipped with each -07 jam-nut receptacle connector
6. For feed-thru connector configurations that are either pin/pin or socket/socket, the position identification/ marking on the D38999 side of the connector will be as shown in MIL-STD-1560. The blind mate separation side will be the reverse identification marking
7. Blind mate side mates with 253-019 with reverse silkscreen marking for contact type PP (pin on both sides) or SS (socket on both sides)
8. Kick-off spring is not intended to offset all of the contact retention force for each insert arrangement
9. Material/finish
   - Shell, jam-nut coupling nut: see part number development, finish
   - Spring: CRES/passivated
   - Insulators: high grade rigid dielectric/N.A.
   - O-ring: fluorosilicone blend
   - Contacts: copper alloy/gold plated

Space-grade, blind mate connectors
Floating jam-nut mount receptacle
for use with 253-018 bulkhead feed-thru

Part Number Development						
Sample Part Number	**253-019**	**-07**	**ME**	**25-35**	**S**	**N**
Series / Basic Part No.	**253-019** = Blind-mate receptacle for use with 253-018 bulkhead feed-thru					
Connector Mounting	**07** = Jam-nut mount (float mount), receptacle **007** = Jam-nut mount (float mount), receptacle; reverse silkscreen marking					
Material/Finish	**ME** = Aluminum, electroless nickel **ZL** = CRES, electrodeposited nickel **MT** = Aluminum, nickel PTFE **Z1** = CRES, passivated					
Shell Size-Insert Arrangement*	Per MIL-STD-1560; symmetrical layouts only, consult factory for complete details

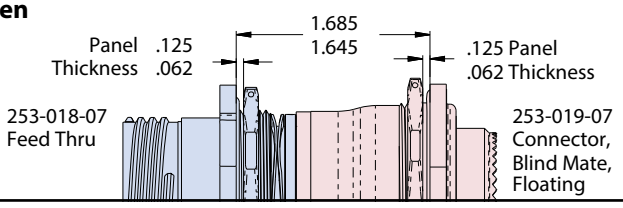
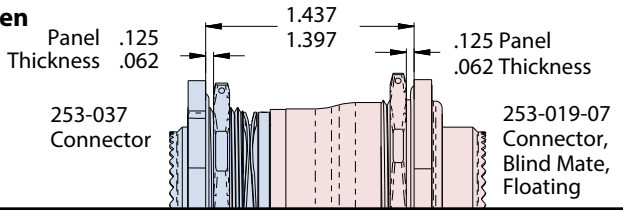
For reference only (not deliverable)



Distance between mated flanges.

For reference only (not deliverable)



C

NOTES:

1. Connector mates with Glenair 253-018 and 253-037 fixed series connectors having same insert arrangement and polarization.
2. Distance between mated mounting flanges as shown. Consult manufacturer if other distance between mated mounting flanges is required.
3. Misalignment capability as shown.
4. See Space-Grade guidelines material, in this section, for outgassing/screening options available
5. Stainless steel locating pin (Ø.079) shipped with each connector
6. Contact factory for PC tail versions.
7. Dimensions and features are intended for customer use only. Dimensions are reference only and not measured during final inspection at factory.
8. Connector style 007, jam nut mount with reverse silkscreen marking is used when mating to 253-018 feed-thru connector that is contact type PP (pin on both sides) or SS (socket on both sides).
9. Material/finish
   - Shell, jam-nut: see part number development, finish
   - Spring: CRES/passivated
   - Insulators: high grade rigid dielectric/N.A.
   - Seals: fluorosilicone blend, silicone
   - Contacts: copper alloy/gold plated

Space-grade, blind mate connectors
Plug, jam-nut mount
with assisted kick-off (spring force)

SuperNine®

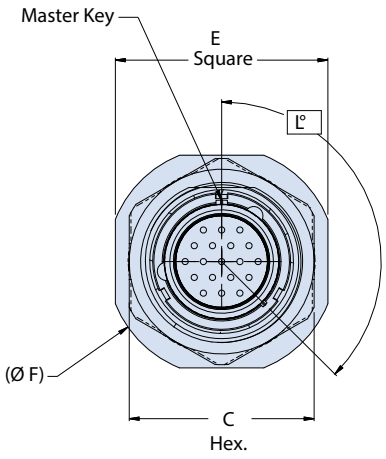
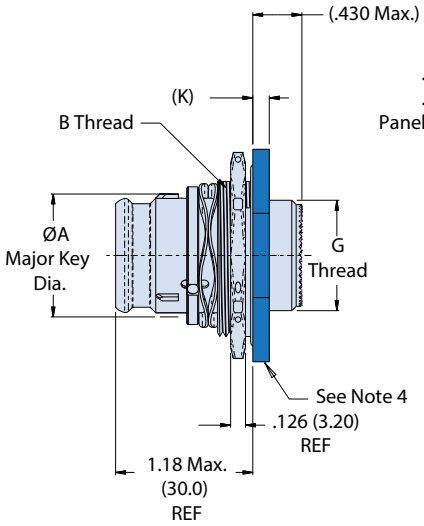
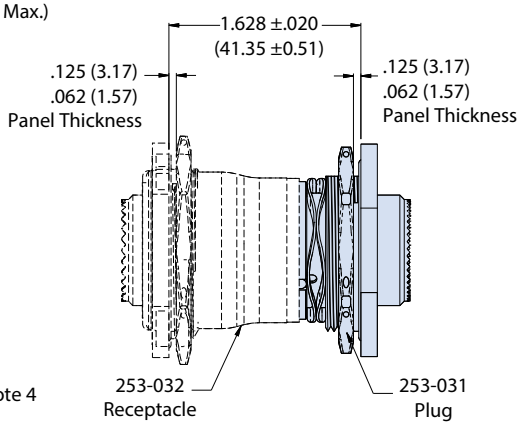
253-031 BLIND-MATE JAM-NUT MOUNT PLUG WITH KICK-OFF SPRING AND ACCESSORY THREADS

07 - Receptacle, Jam Nut Mount





Mated Jam Mount Connectors



*Dimensions shown are for reference only and not intended to be verified during final inspection

NOTES:

1. Connector mates with Glenair 253-032 series connector, having the same insert arrangement and polarization.
2. Insert arrangement is in accordance with MIL-STD-1560 arrangements only. Contact manufacturer for availability.
3. See Space-Grade guidelines material, in this section, for outgassing/screening options available
4. Blue color band indicates rear release contact retention mechanism.
5. Kick-off spring is not intended to offset all of the contact retention force for each insert arrangement
6. Material/ finish:
   - Shell, jam-nut: see part number development table, finish
   - Insulators: high grade rigid dielectric / N.A.
   - Contacts: copper alloy/gold plated
   - O-ring: fluorosilicone blend / N.A.

NOTES:

1. Material/ finish:
   - Shell, coupling ring, segments - see part number development, finish
   - Insulators - high grade rigid dielectric / N.A.
   - Contacts - copper alloy / gold plated
2. Connector mates with Glenair 253-016 series connector, having the same insert arrangement and polarization.
3. Insert arrangement is in accordance with MIL-STD-1560 arrangements only. Contact manufacturer for availability.
4. Connector mated with Glenair 253-016 is shown for reference only.
5. See Space-Grade guidelines material, in this section, for outgassing and screening options available
6. Blue color band indicates rear release contact retention system

C

JAM-FREE LAUNCHING

AS81703 Series 3 Type Lanyard Connectors

Ideal for high shock / high vibration environments including military space and defense applications such as missile and space payload deployment, the AS81703 provides jam-free, push-on, pull-off operation. Glenair's AS81703 Series 3 type connector series is intermateable and intermountable with currently available AS81703 mil-spec and commercial connectors, and offers several enhancements to the standard design: an integrated band porch for shield termination, 360° saw teeth for rear-end accessory clocking, and a red full-mate indicator stripe. The AS81703 Series 3 type connector is ideally suited for droppable stores, umbilical connect, air launch to orbit, and other extreme vibration and shock environments where rugged and reliable lanyard-release and push-pull mating is a must. Nineteen contact arrangements are available, including hybrid signal/power layouts, and a full complement of backshells and connector accessories is offered—with Glenair's high availability and quick delivery.

- **Intermateable and intermountable with available AS81703 connectors**
- **Signal, power, and high-speed shielded contact arrangements**
- **Reliable fail-safe axial-pull lanyard equipped coupling**
- **Instant disconnect for critical quick-release systems**
- **Available integrated band porch for easy shield termination**
- **360° saw teeth for accessory clocking**
- **Red full-mate indicator stripe**
- **Blind mate and rack-and-panel versions available**
- **Available backshells and accessories IAW AS81703**
- **Polarization keying for mis-mate prevention**

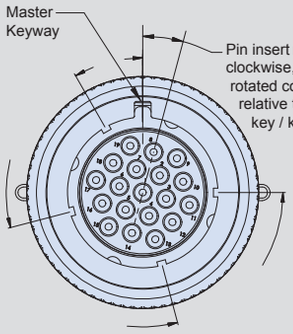
Insert Clocking Positions	**N**, **W**, **X**, **Y**, **B**, **C** (See Table III)							
Lanyard Ring Mod. Code (-08 Receptacle Only)	**Omit** = Standard Lanyard Ring **812** = Lanyard Ring Rotated 90° from Master Keyway							

Table I - Material and Finish

Code	Mil Class	Material	Finish
C	-	Aluminum Alloy	Black Anodize
ME	E		Electroless Nickel
NF	L		O.D. Cadmium over Electroless Nickel
MT	-		Nickel-PTFE
ZR	-		Zinc-Nickel/Black (Tri-Valent CR)

Insert Rotation and Insert Clocking Rotation



AS81703 Series 3 type connectors feature locksmith key/keyways. Plug connector keyways and receptacle connector keys are fixed for all sizes and contact arrangements.

Alternate Insert Clocking is specified in the part number. Pin inserts are rotated clockwise, Socket inserts rotated counter-clockwise relative to the master key/keyway, to the positions indicated in the table below.

Table II: Contact Arrangements

Contact Arrangement	Contact Size & Quantity

Sym.	Material	Finish
A	Aluminum Alloy	Black Anodize
N		Electroless Nickel
W		Cadmium, Olive Drab
X		Nickel Fluorocarbon Polymer
Z		Zinc Nickel

NOTES

1. Glenair Series 600 Backshell Assembly Tools are recommended for assembly/installation.
2. Cable entry is measured with saddle bars closed and bottomed on clamp ears.
3. Material/Finish:
   Clamp body, coupling nut, saddles - Al alloy or 300 Series SST/See Table II.
   Clamp screws and lock nuts - CRES/Passivated, Silver plate optional.
   Anti-rotation device - Corrosion resistant material

Straight Shrink Boot Adapter

AS85049/60-1

Basic Part Number: M85049/60-1

Shell Size: W 22

Finish
- *A = Black Anodize*
- *W = 1000 Hr. Cadmium Olive Drab*
- *X = Nickel Fluorocarbon Polymer*
- *Y = Pure Dense Electrodeposited Aluminum*
- *Z = Zinc Nickel, Black*

Superseded Part Number

Basic Part Number: MS3158 - 22 C

Shell Size

Finish
- *A = 1,000 Hr. Cadmium Olive Drab*
- *C = Cadmium Olive Drab*
- *N = Electroless Nickel*

NOTES

1. For complete dimensions see the applicable Military Specification.
2. Metric dimensions (mm) are in parentheses.
3. Cable Range is defined as the accommodation range for the wire bundle or cable. Dimensions shown are not intended for inspection criteria.

Outgassing Properties and Requirements

Specification information
Space-grade interconnect manufacturing and test capability

Outgassing and Inspection Modification Codes

Glenair space mechanisms and related interconnect solutions are ideally designed for deployment of CubeSat and NanoSat equipment. All HDRMs, and connectors feature materials, finishes, and performance specifications that perform to NASA EEE-INST-002

Outgassing

Space flight equipment requires low-outgassing components in order to prevent degradation to optics and other sensitive instruments. Various Glenair connectors contain nonmetallic materials such as rubber, plastic, adhesives and potting compounds which can give off gasses when subjected to a vacuum or high heat. Unless the connector is specially processed, the TML and CVCM can exceed allowable limits. The space industry has adopted a standardized test procedure, ASTM E595, to evaulate outgassing properties. The MIL-DTL-38999 specification Class G also details specific TVM and CVCM values. In Glenair's 186T process, for example, connectors and connector materials are heated to 175° C at a vacuum of 5 X 10^{-6} Torr for 48 hours. Items under test are then weighed to calculate the Total Mass Loss (TML), which may not exceed 1.0% of the total initial mass. A collector plate is used to determine the Collected Volatile Condensable Material (CVCM), which may not exceed 0.1% of the total original specimen mass. Glenair is able to offer outgas processing which assures all materials comply with their respective standards.

Note on Connector Material and Finish Options

Some types of metals are prohibited for space flight. "Pure Tin, Cadmium, Zinc shall not be used as a final finish on EEE part (NASA EEE-INST-002 Instructions for EEE Parts Selection, Screening, Qualification, and Derating). NASA recommends electroless nickel or gold finish on connector shells and gold finish for contacts.

Specifying Appropriate NASA Screening

1 ***Choose a NASA EEE-INST-002 Table 2A screening level.*** This table contains three screening levels: ***Level 1*** for missions requiring the highest reliability and lowest level of risk, ***Level 2*** for low to moderate risk missions, and ***Level 3*** missions where enhanced screening and inspection is not invoked.

2 ***Choose outgassing process and/or NASA inspection requirements.*** 9 options are available for NASA outgassing, see Table I for details. Cross reference Table II for inspections completed by screening level as required by NASA standards.

3 ***Select the modification code*** from the table and add it to the part number. Example: 253-01600ME21–35PNMSA-**429.**

Table I: Outgassing per NASA Screening Levels and D38999, Class G

Screening Level	No Outgas Processing	48 Hour Oven Bake 175° C 100%	Thermal Vacuum* Outgassing 24 Hour 125° C 100%	Thermal Vacuum* Outgassing 48 Hour 175° C 100%	Mod Code
No Screening			●		186M (ASTM E595)
				●	186T (Class G)
3			●		429L
2	●				429
			●		429A
		●			429K
1	●				429B
			●		429C
		●			429J

*Thermal vacuum of 10^{-6} Torr.

Table II: NASA EEE-INST-02, Table 2A Screening Levels

Inspection	Level 1	Level 2	Level 3
Visual	100%	100%	100%
Mechanical	2	2	
Dielectric Withstanding Voltage	2	2	
Insulation Resistance	2	2	
Contact Engagement & Separation Force	2		
Hermeticity (Sealed Receptacles Only)	100%	100%	100%
Coupling Force	2		

Note: required inspection quantity shown. Zero acceptance of failures allowed for all quantities inspected. Inspection is not performed/required for MIL-DTL-38999, Class G

SCREENED

Glenair's family of space mechanisms are manufactured in certified cleanrooms. Full qualification test reports are available for every device type. NASA/ESA outgas processing and screening completed on-site. All operations are managed under a single certified quality system with unprecedented levels of performance.

But don't take it from us... take it from NASA

Send To... Chris Toomey; Cc... Bcc... Subject: Glenair Supplier Audit Appreciation

December 5, 2016

Good afternoon Mr. Christopher J. Toomey…and to the Glenair Family

On behalf of the NASA Launch Services Program (LSP) and the Safety and Mission Assurance Division (SMA), I would like to express sincere appreciation for the hospitality afforded our NASA team… last week. It is obvious that your company takes pride and recognizes the value in meeting and even exceeding the intents of the Aerospace Standard AS9100. We came away with a positive sense in the partnership… . You have a remarkable campus facility and a remarkable employee team there in Glendale, and I am sure, throughout your vast network of offices and facilities around the world as well. The Quality leadership has done an outstanding job implementing a working Quality Management System around your successful business model. Thank you for recognizing the importance of this particular supplier audit to NASA… , as we seek crucial information relative to the NASA Certification… .

…I would like to express some of the other very positive comments that our team came away with regarding this audit. All of your employee team should take pride in the quality of your finished product line for your customers. To that end, here is a listing of but a few of our team's observations during the audit process:

1. Welcoming hospitality to customers
2. Informative Corporate Overview Presentation
3. Positive Employee Attitudes about the workplace
4. Informative and thorough process walk-downs
5. Informative and thorough production facility walk-downs
6. Processing area cleanliness and 5S organization
7. Timely Corrective Action and effective Preventive Action plans
8. Top Management involvement and participation in the QMS – AS9100 processes
9. Expertise of the employee team members
10. …and the ability of a randomly selected employee to express the Quality Policy and what it means to him in his position with the company

A formal compilation report is in work, and should reflect the over arching positive note, which recognizes that the audit at Glenair had no Major and no Minor findings whatsoever. Please forward to any appropriate team members who have contributed to this successful audit.

Respectfully,
Paul Cloues, NASA Quality Engineer
NASA Launch Services Program
Safety and Mission Assurance, SA-D
Analysis Planning and Test (APT) Research

Chris Toomey

PROVEN FLIGHT HERITAGE

SPACE-GRADE SOLUTIONS

NASA · ESA · JAXA · Commercial

Complex space-grade cable assemblies (shown: Glenair-made "Golden Umbilical")

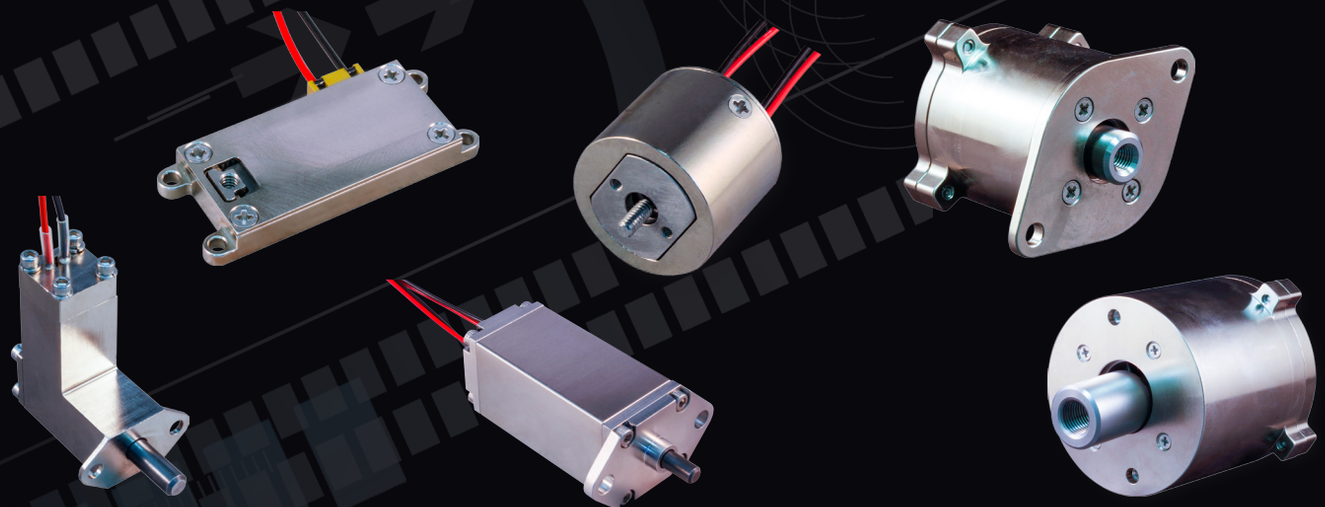
TURNKEY, SPACE-GRADE EMI/RFI WIRE HARNESS AND CABLE ASSEMBLIES

Multibranch Micro-D / Mighty Mouse cable assembly with ArmorLite™ lightweight EMI shield overbraiding

EMI/RFI shielded multibranch Micro-D connector assembly with Glenair Series 23 SuperNine® panel mount I/O connector

Repairable backshell-equipped cable assembly for a space lab application

HOLD-DOWN RELEASE MECHANISMS, PIN PULLERS AND PIN PUSHERS



Light Duty
Up to 75 lb release payload

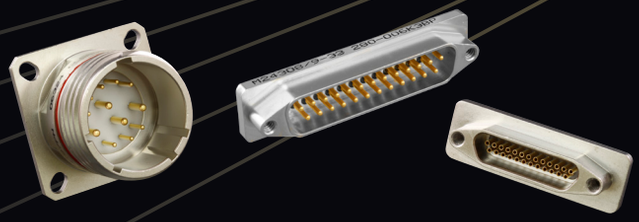
Medium Duty
Up to 1,000 lb release payload

Heavy Duty
Up to 20,000 lb release payload

SPACEWIRE CERTIFIED CABLES

Laboratory and flight variants

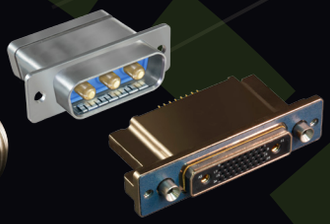
SPACE-QUALIFIED HERMETIC RECEPTACLES



Glass-to-metal and CODE RED encapsulant hermetic solutions for high-pressure / low-leakage space applications

EMI/RFI FILTER CONNECTORS

MIL-DTL-38999 type, Series 80 Mighty Mouse, and other circulars

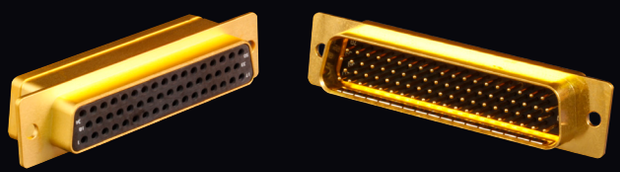


HiPer-D and Micro-Crimp filtered rectangulars

SPACE-GRADE 83513 MICRO-D AND 32139 NANO

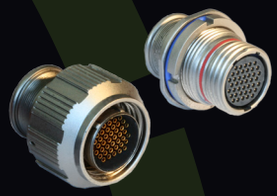
ESA and NASA screened connectors and backshells available as discrete components or wired pigtail assemblies

SERIES 28 HIPER-D M24308 INTERMATEABLE

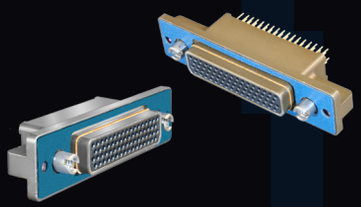


Qualified MIL-DTL-24308 Class K Space-Grade Hermetic, environmental, filter, Sav-Con® s and cordsets

LIGHTWEIGHT MIGHTY MOUSE AND SERIES 79



Small, lightweight, high-density ideally suited for space programs



A proven product, ideal for guidepin and rack-and-panel applications

SAV-CON® CONNECTOR SAVERS

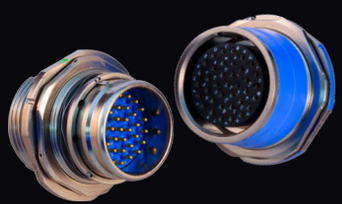
Available for every military and commercial circular and rectangular connector series

ULTRA-LIGHTWEIGHT CONDUIT AND BRAID

Factory-terminated and user-installable conduit systems

Weight-saving microfilament EMI braided shielding solutions

ASSISTED-RELEASE, AND LANYARD QUICK-DISCONNECTS



Blind mate D38999 type feedthrough with kick-off assist

Lanyard-release quick-disconnects

FIBER OPTIC CONNECTORS, CABLES, AND PHOTONIC MEDIA CONVERSION

High-speed, high-bandwidth space-grade solutions

MISSION-CRITICAL
